日常 その2

Artist: Kahi

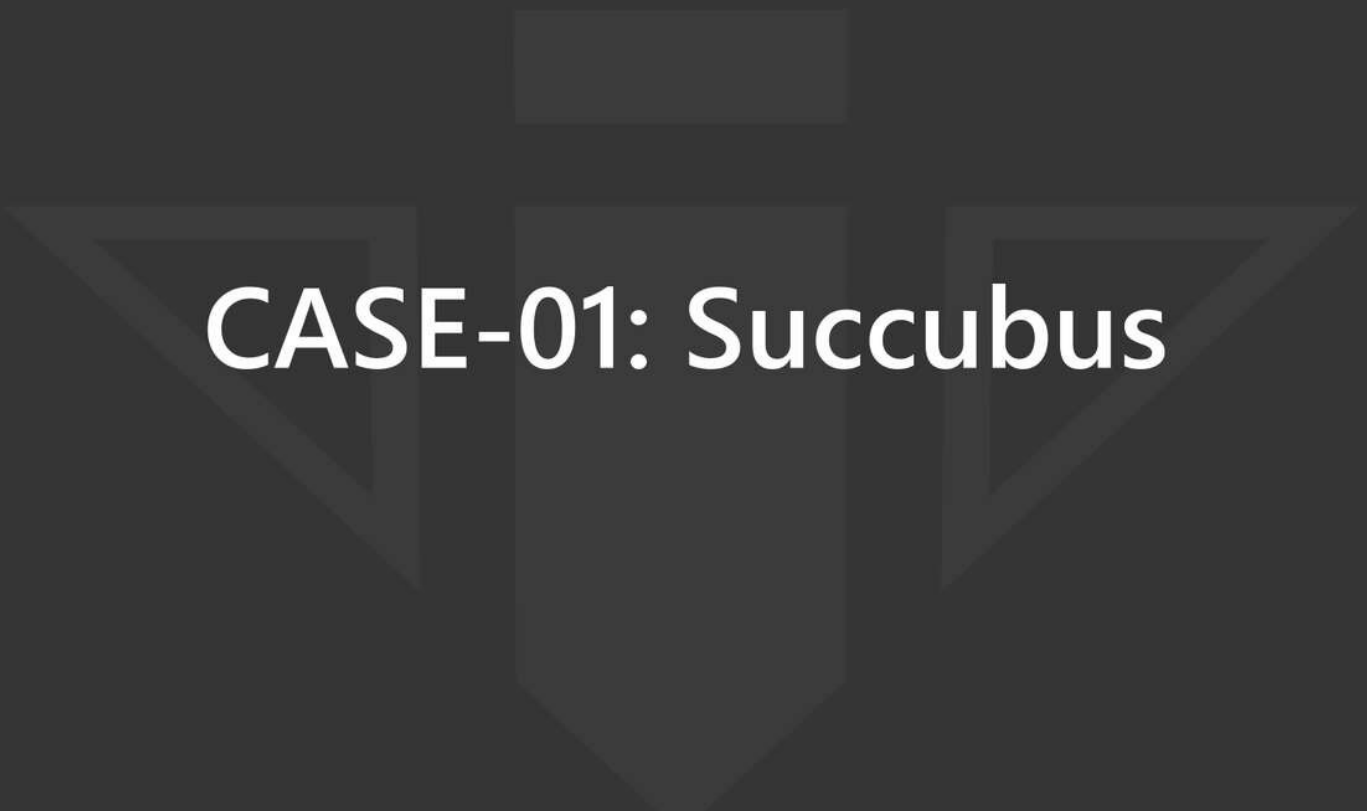

Miyo Takada

A researcher who works for UCRI (Unidentifiable Creatures Research Insutitution). Occasionally, she takes part in experiments as a subject.

Height: 165cm Weight: 53kg
BWH: 92/55/86cm

CASE-01: Succubus

She's been already hermed, but
I wonder if they like it.

But, this is just the beginning ♥

And the first orgasm ♥

はぁ

はぁ
はぁ
はぁ

Her dick's sensitivity must be soring up as the engravings are glowing ♥

They started the second round ♥

かぽっ♡

Look at her sad face ♥

She doesn't need to hold it, does she ♥

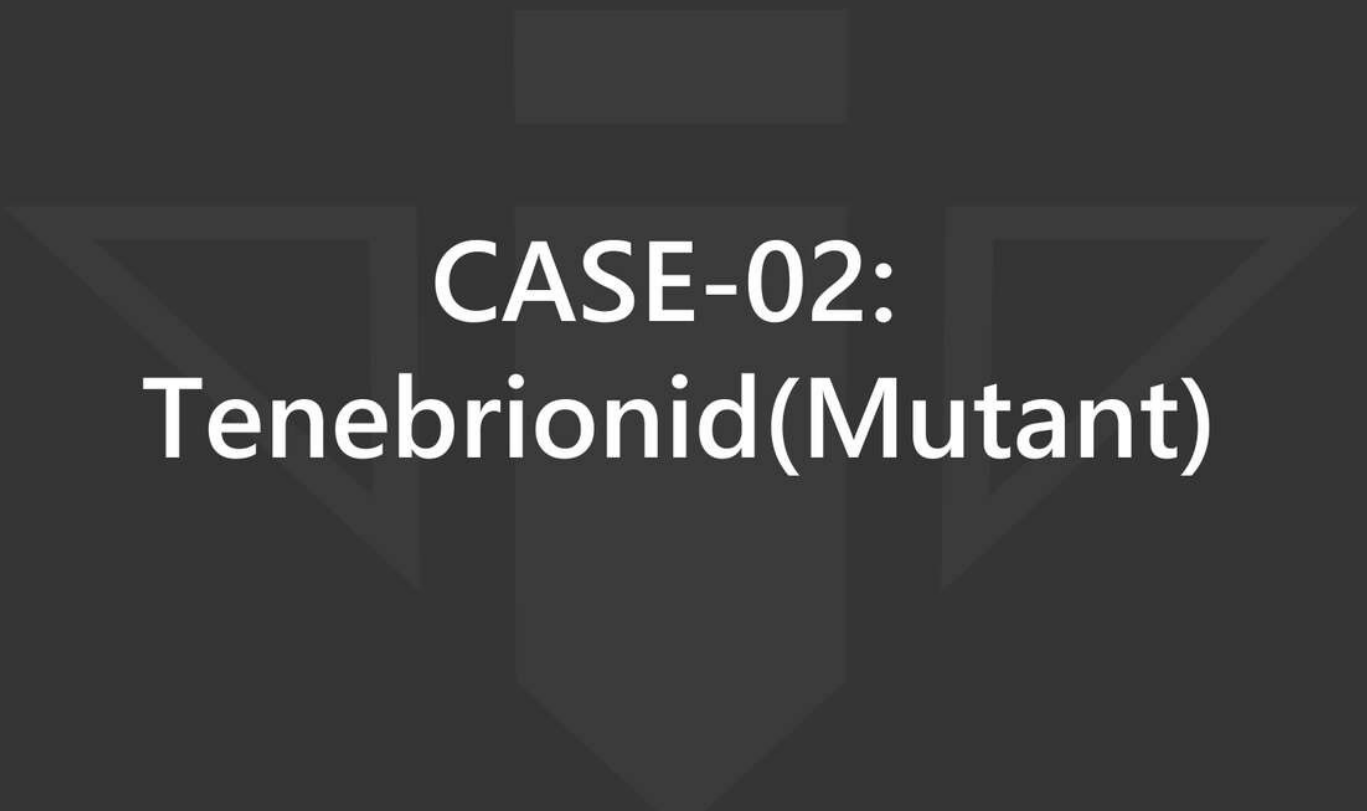

That's a huge amout of sperm
for the second round ♥

Wow! She cummed so hard ♥

Since they're gonna break
her otherwise ❤️

— We should retrieve her now.

CASE-02: Tenebrionid(Mutant)

What you're seeing now is
the mutant of Tenebrionid.

Its larva is known
as Mealworm.

Normally on the breeding ground, you have to put something nutritious like vegetable so the larvas can take a meal soon after hatch.

But, what could be more nutritious than human milk ❤️

Look at how Tenebrionid's eggs being shoved into the lacteal gland ♥

The eggs were laid perfectly.

I hope she'll give birth
to healthy babies ❤️

Can you see the larvas
crawling out the nipples ♥

Childbirth is usually painful
and discomforting--

But, well, she seemed
to like it ♥

The hungry babies jumped at and suck the nipples ❤️

It's quite a delicacy
for them ♥

Let's leave it as it is
till they grow big ♥

CASE-03: Tentacle Chair

This is Tentacle Chair.

We don't know how long this thing have been around in this world, but it's used as a torture device that gives pleasure.

Milking tentacles took the nipples into the mouth ♥

Believe or not, it's a living creature. So it needs some nutrition ♥

Milk is drooling out the nipples ♥

And it's their sweet
staple food ♥

Huh? They stopped milking.

Is there something
wrong with her?

Another set of tentacles.

Wait...I've heard their internal fluid can expand prey's breasts.

This green fluid is the thing ♥

You'll see what I meant soon ♥

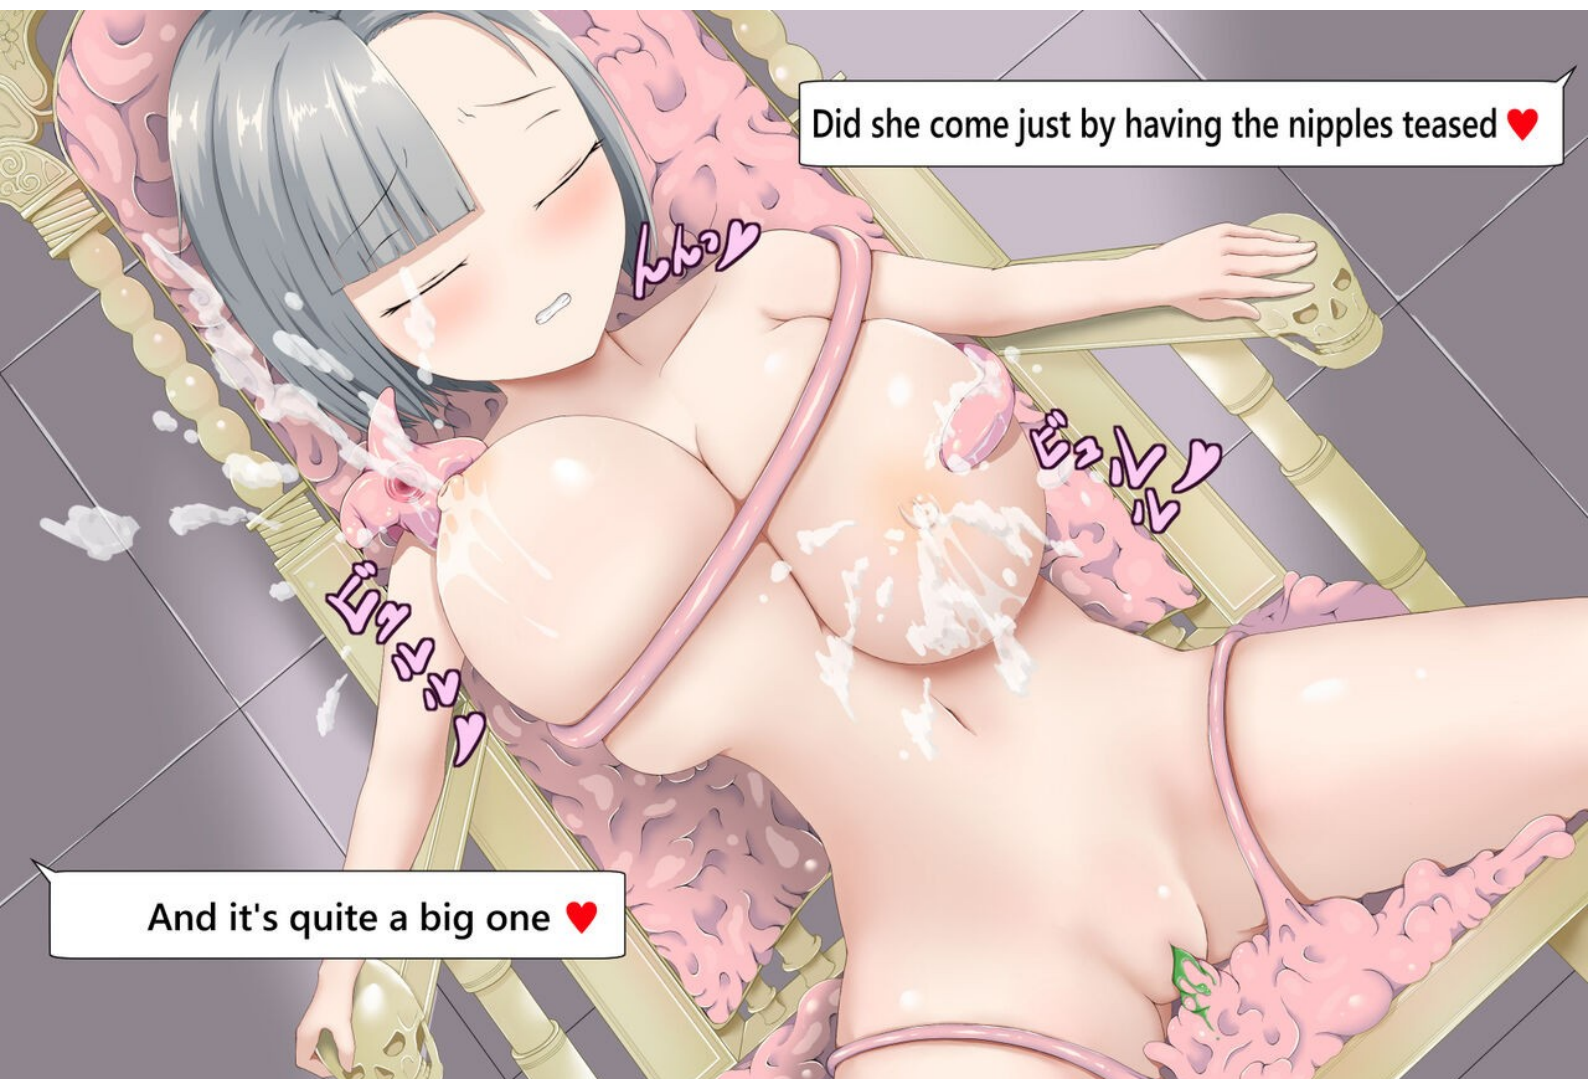

Her lewd boobs expanded nicely ♥

Her nipples are just oozing out milk like they're waiting to be sucked ♥

The milking tentacles dived
at them on demand ♥

They're gonna suck out all
the milk in her breasts ♥

Did she come just by having the nipples teased ♥

And it's quite a big one ♥

Seems like the last drop of
their milk just drained out ♥

She looks pretty tired. We should
cease the session and retrieve her.

CASE-04: Peanut Worm(Mutant)

We captured the mutants of Peanut Worm.
A regular peanut worm could grow up to 50cm.
But the mutant seems to be even bigger.

One of them is sticking out
the organ called "proboscis".
It's usually used to capture prey--

These boys use it to tease
the lacteal gland ♥

A pregnant anime girl with short grey hair and blue eyes is lying down. A large blue tentacle is wrapped around her belly, with its proboscis inserted into her navel. She has a surprised expression. A speech bubble from the tentacle explains its function. An inset image shows a cross-section of the navel area. Another speech bubble explains the benefit of the tentacle's vibration.

It's vibrating the proboscis and stimulating the lacteal gland ♥

ああっ♥

And this'll increase the nipples' sensitivity and help lactation ♥

Her warm and tasty nipples
started drooling out milk ♥

They should suck out all
the milk inside or that'll
be mean otherwise ♥

They gently put the nipples
in the mouth ♥

It's time for supper ♥

Wow! They're teasing the
lacteal gland while sucking milk ♥

ズリユ♥

Quite dextrous,
aren't they ♥

Her nipples' sensitivity already rose to the limit.
So the pleasure she's feeling now is unimaginable ♥

ああっ♡

フワッ
フワッ
フワッ

フワッ
フワッ
フワッ
フワッ

Just look at how much milk she gave♥

Guess there'll be no need to feed them for a while♥

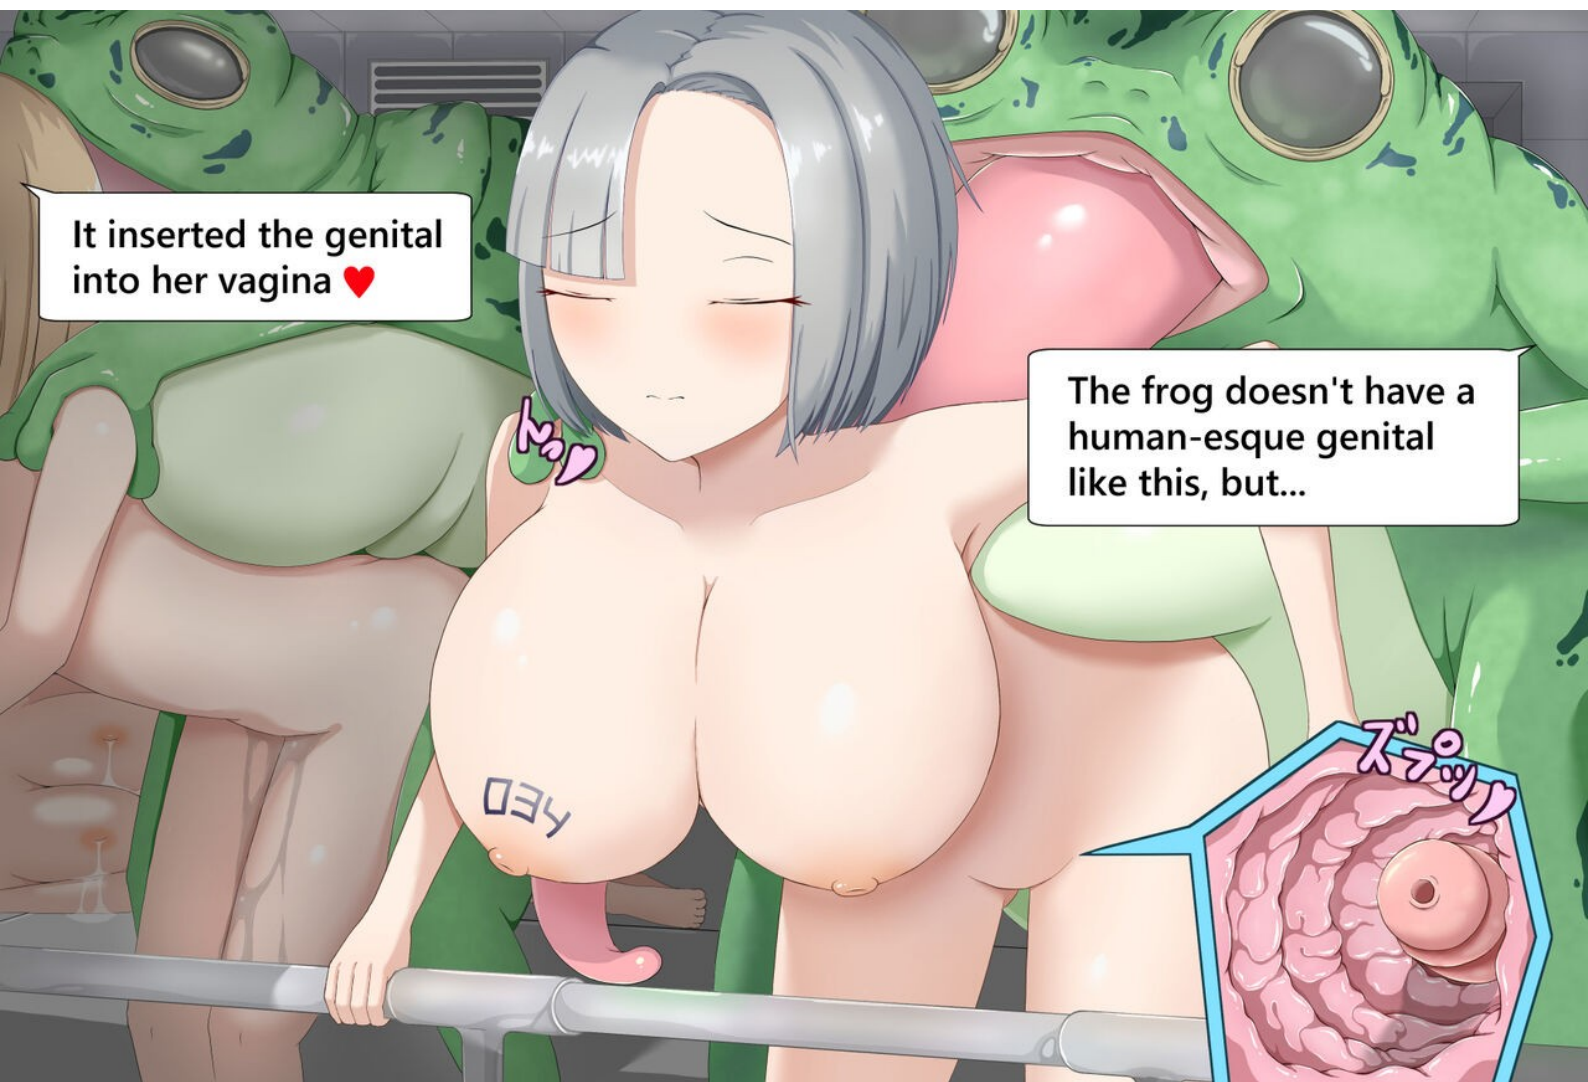

CASE-05: Bullfrog(Mutant)

This is the mutant of the frog. I guess the original species is Bullfrog.

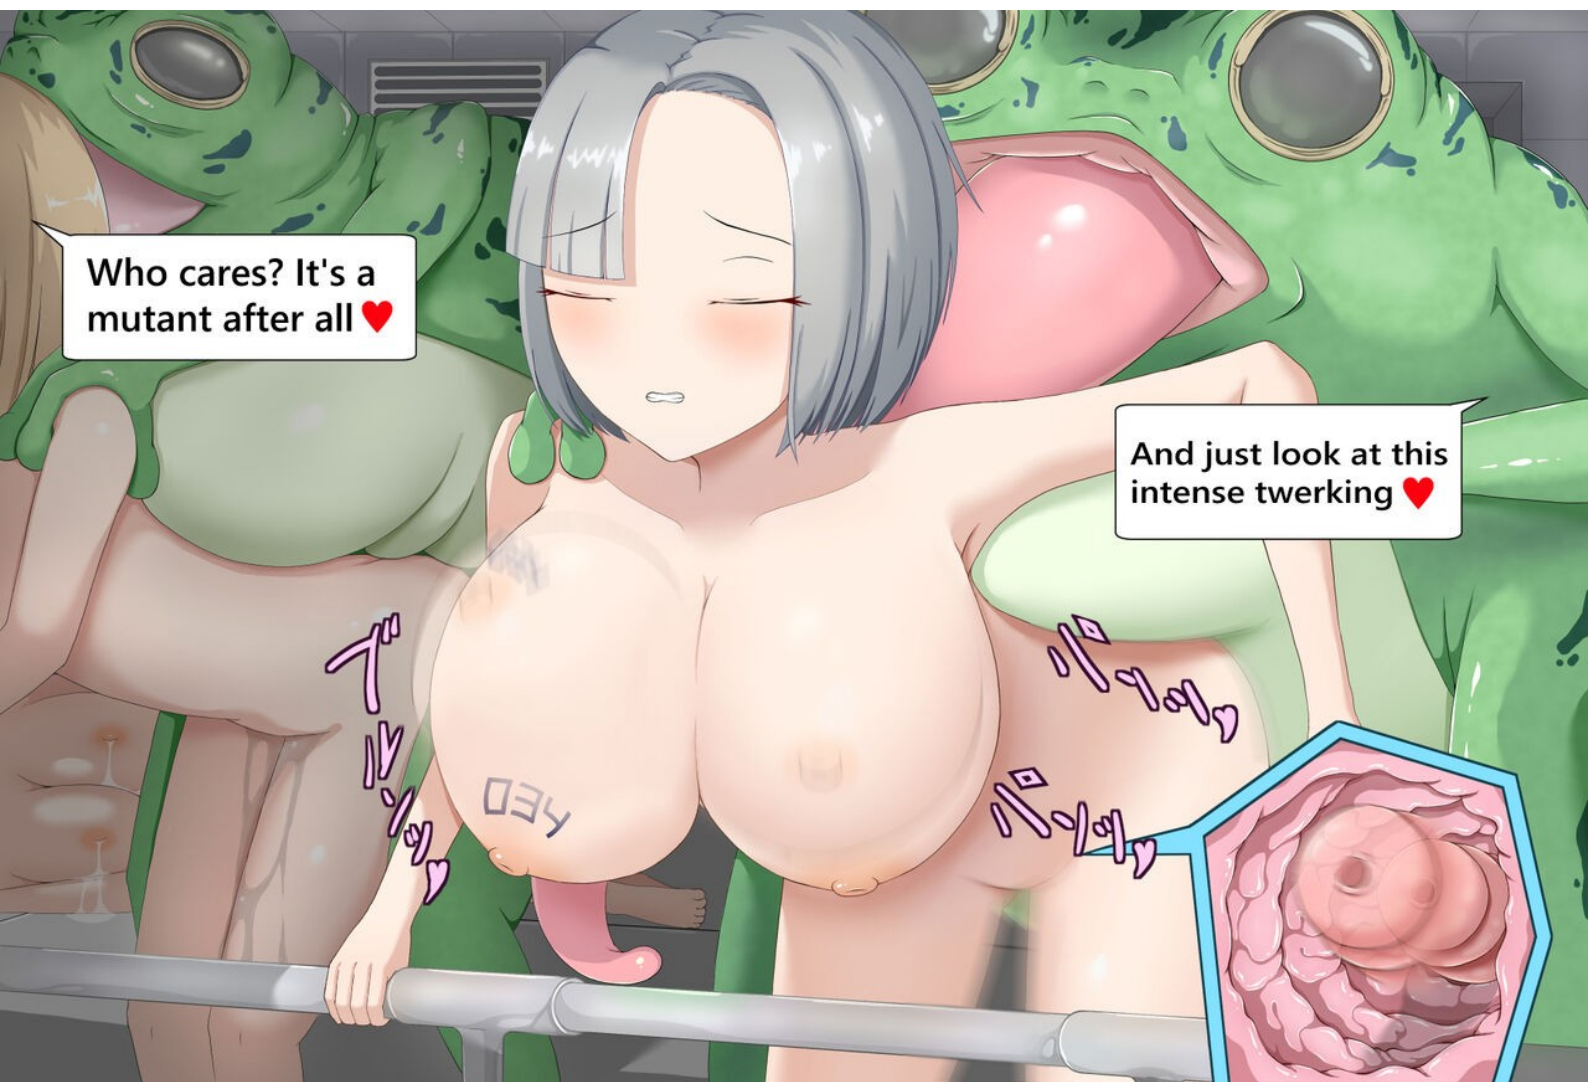

One of them is about to copulate with №034.

It inserted the genital
into her vagina ❤️

The frog doesn't have a
human-esque genital
like this, but...

ズッ
ッ

Who cares? It's a mutant after all ❤️

And just look at this intense twerking ❤️

The first round is over ❤️

She also seemed to come ❤️

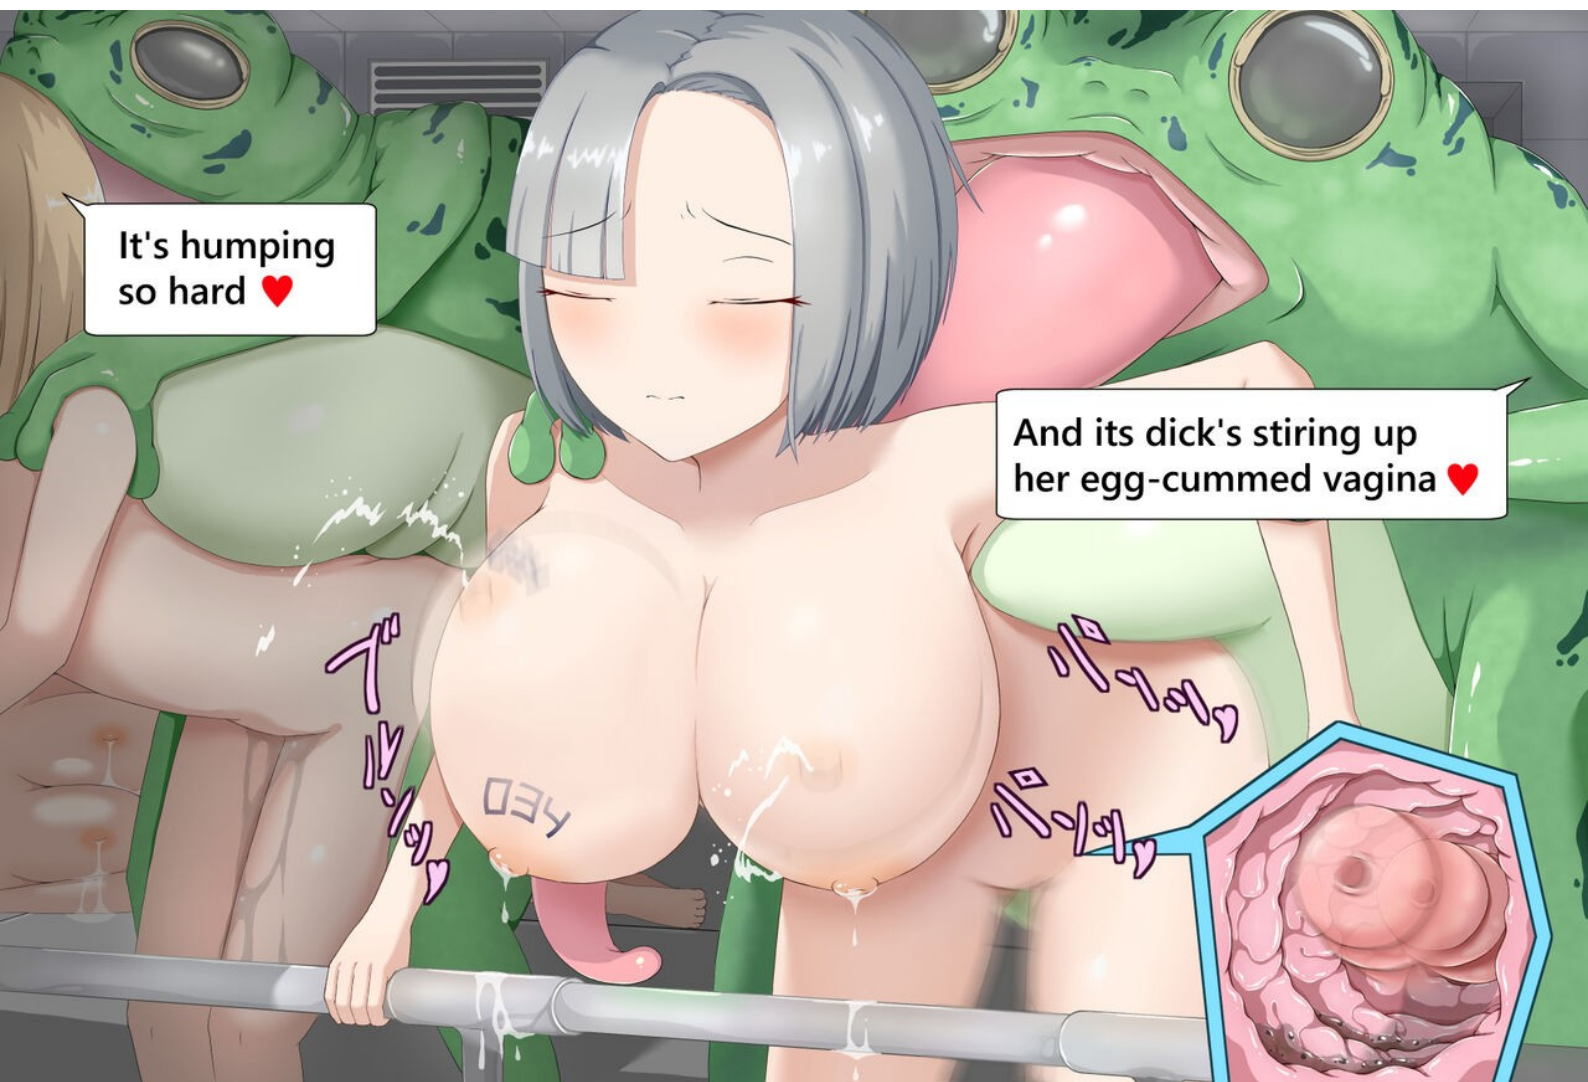

Milk's coming out her nipples ❤️

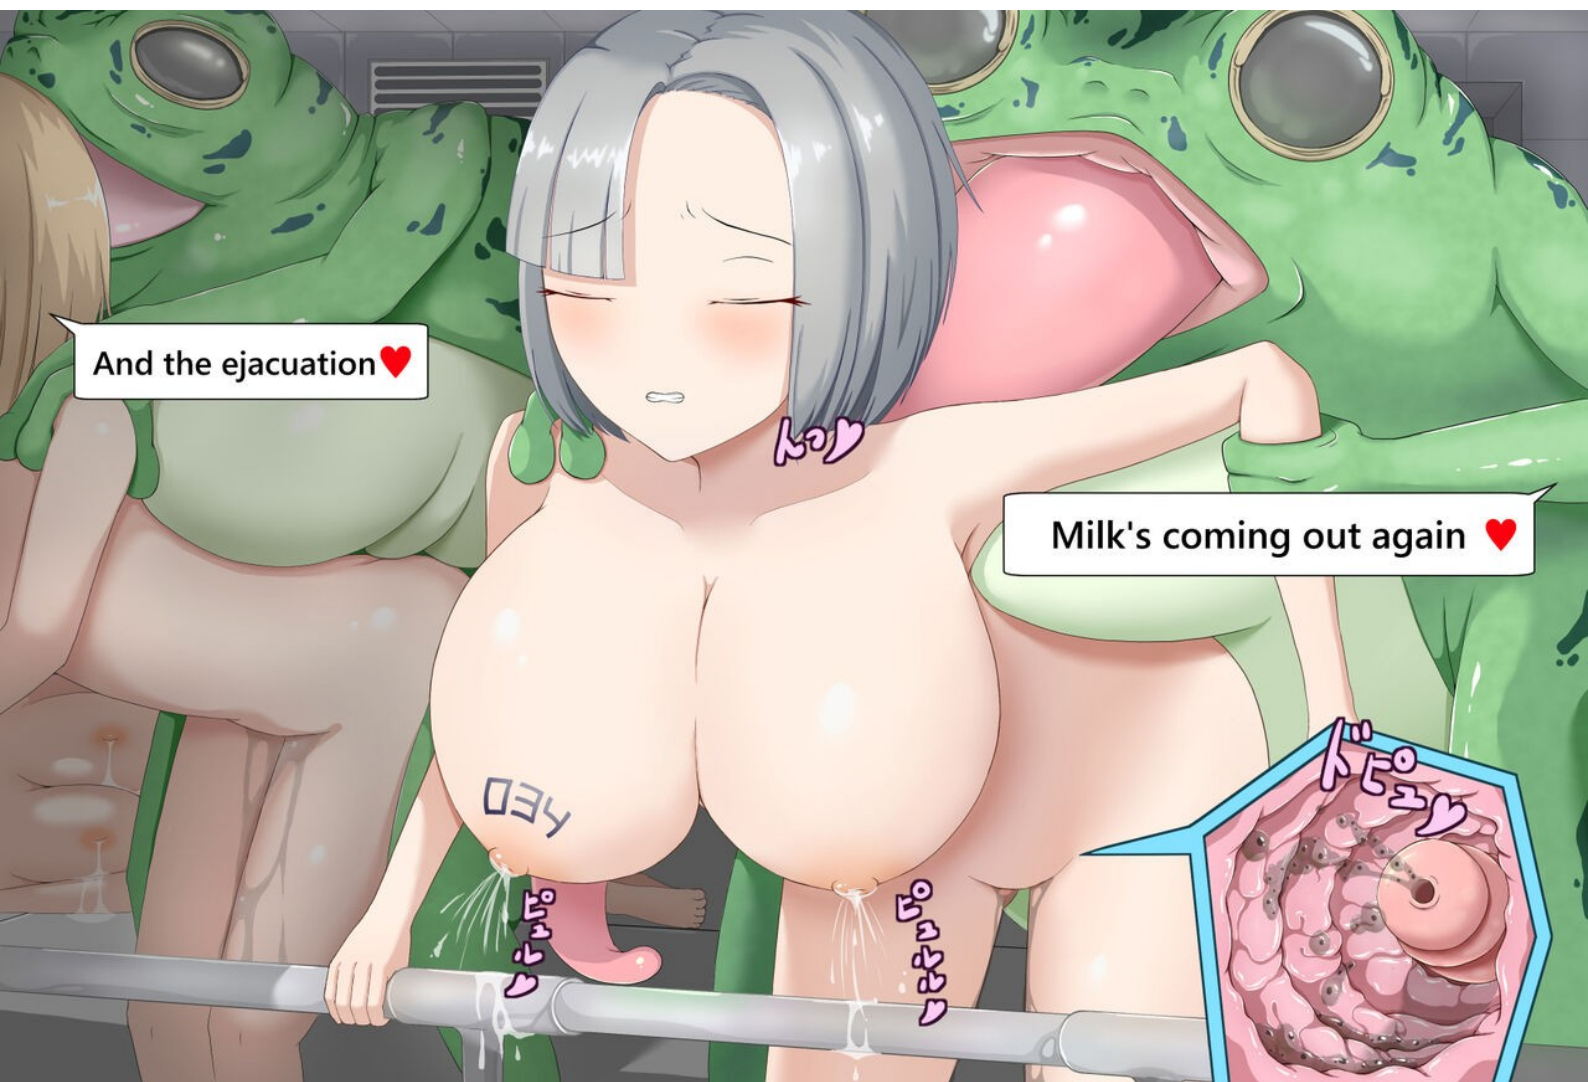

Cummed inside, her body became ready to feed babies ❤️

Time for the second round ❤️

ズッ
ッ

And the ejaculation ♥

Milk's coming out again ♥

The eggs've hatched already.

The babies are sucking her nipples ♥

Since they liked her milk, let's just leave it as it is ♥

触ラボ

-PART3-

She was assigned a certain field research.

Rumor has it that the creature shows up
when you're sleeping on the grass like this.

It is parasitic flies that made an appearance.

And they lay eggs in the human's breast duct.

Their ovipositors enter her breast ducts.

It won't be long before they start laying eggs.

Dozens of parasitic eggs
flood and fill her breast ducts.

Nnnngh!♥

She feels no pain but only sharp
pleasure coursing through her spine.

Minutes passed and the eggs hatched.

The maggots stimulate her lacteal gland and feed on milk produced.

They immediately grow big and start directly sucking her nipples.

She's now completely immobilized.

She needed to remove the maggots and
tried using ribbon worms to suck them out.

They were hiding
in the lee of coastal rocks.

Hah♥

Hah♥

They jumped to suck her nipples.

If she endures this milking process, she could take out all the maggots inside.

Her breasts, brimmnigly inflated with milk and parasites, squirted the fluid of pleasure

Hah ♡

Hah ♡

But she's not yet completed the removal of these parasitic creatures.

The ribbon worms gently chew on her nipples again as if they picked up her thoughts.

Shap♥

Nnngh!♥

Shap♥

The nipples' sensitivity has already maxed out.
Strong sexual pleasure distracts her mind.

Aaaaah!!

Splurt

Splurt

Now all the maggots are gone out of her milk ducts.

But she won't be able to move until these milk-lovers are satisfied.

She got lost in the cave. While she's wandering about in search for the exit, a sharp stab of pain shot through her leg.

She loses control of her lower limbs and falls onto the ground. It was nerve toxin from these sea-anemone-esque creatures.

Their long tentacles press apart her vulva and expose the most vulnerable and sensitive part of the human body.

Spread 

She's never seen this species but her instinct told herself that they're going to tease and toy her.

They whip out another tentacle
and suction her clitoris.

Slurp

Nngh

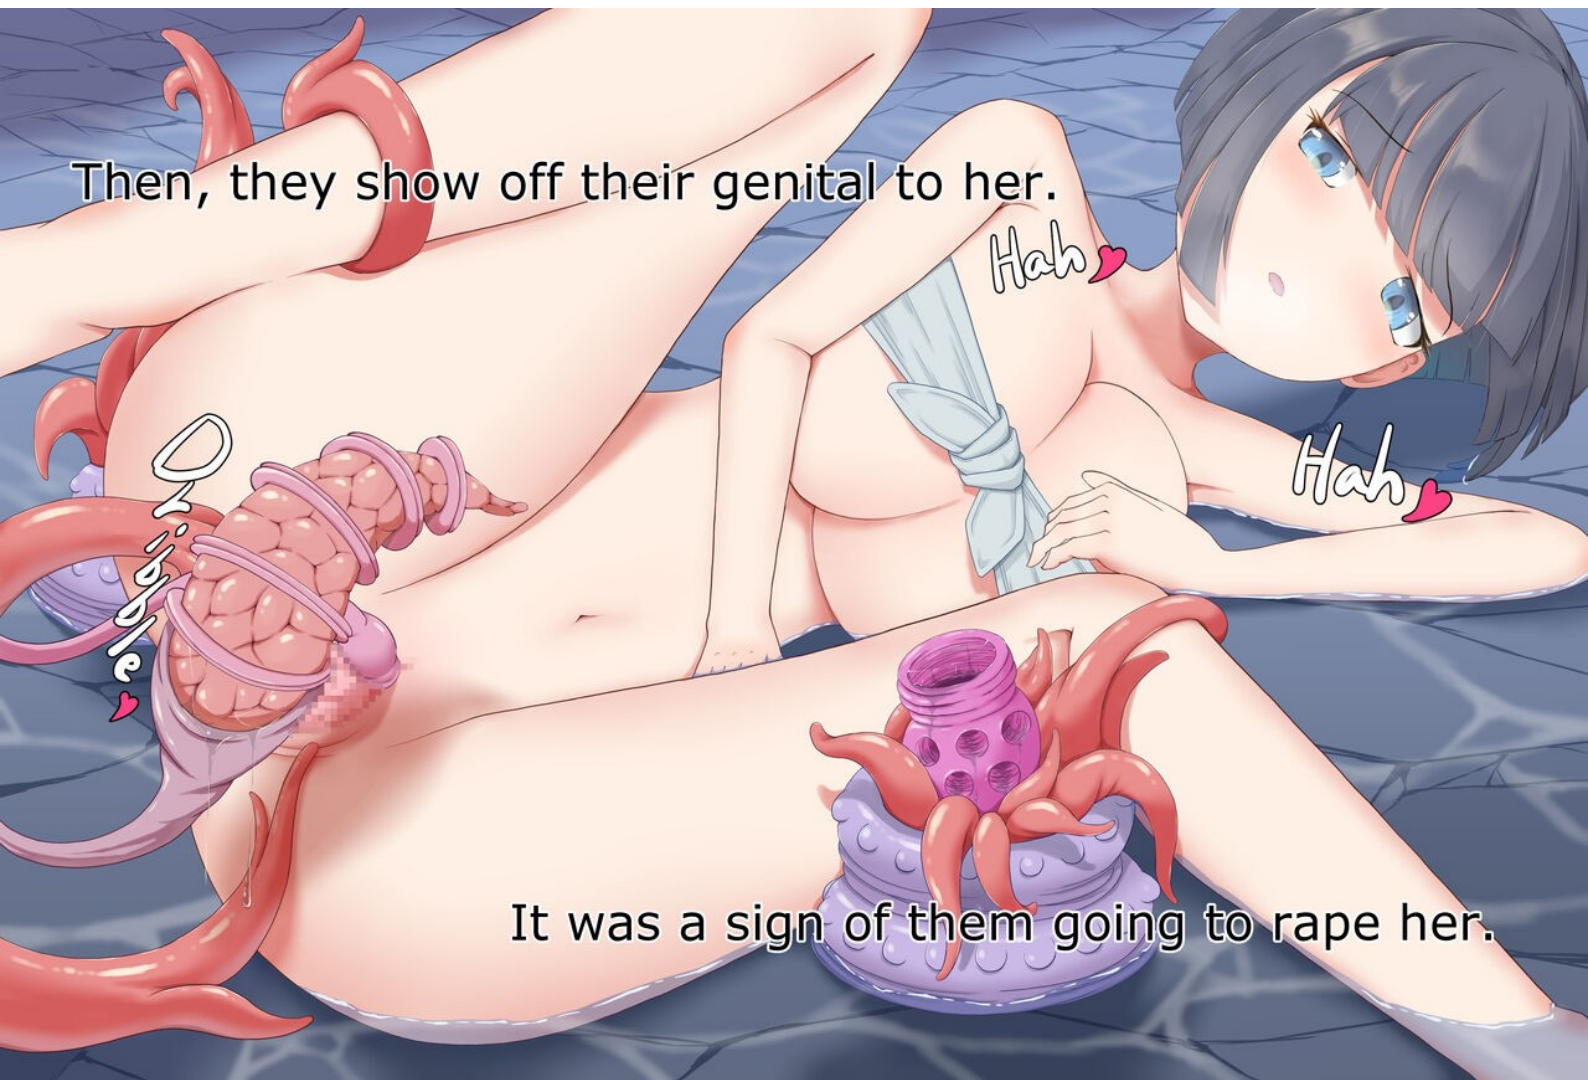

Then, they show off their genital to her.

Hah ♡

Hah ♡

It was a sign of them going to rape her.

Their thick and elastic dick enters
her vagina and hits its deepest part.

Nnnngl!♥

Smooth♥

The ring-shaped protrusions rub
the vaginal wall, giving intense
genital sensation that makes her squirm.

Its piston movement gets faster.

Nngh!♥

Nngh!♥

Squelch♥

Squelch♥

Squelch♥

The moment it squirted white slimy fluid,
she too reached orgasm.

Hah...♥

Hah...♥

Dribble♥

It takes some time for her
numbed lower limbs to
recover and she's just
their plaything until then.

Sit-and-wait predators have
a predilection for mimicry

But you'd never expect that
this whole swamp is a swarm of leeches.

Two leeches climbed
up to her nipples.

It seems like that they love human's milk.

She felt something inserted into her breast duct.

Prick♥ Nngh♥ Prick♥

Then, Leeches' body fluids flowed in through the tips of her nipples.

Her nipples grow hot and
brim with milk.

Hah♥

Hah♥

e♥

The leeches open
their mouths wide.

Both leeches start sipping milk at once.

Her nipples' sensitivity has already increased to a maximum extent. Every suction makes her moan and squirm in sexual pleasure.

Breastmilk oozes out without her intent.

Nnngh! ♡

Slurp ♡

Slurp ♡

D-r-i-b-b-l-e ♡

D-r-i-b-b-l-e ♡

But the leeches squeeze her nipples even stronger as if that's still not enough.

Other leeches came to join the feast.

She lost her spirits to resist. Now she can only wait for them to suck out the last drop of her breastmilk.

It was succubi that helped her
get out of the swarm of leeches.

They even offered to
take her to the laboratory.

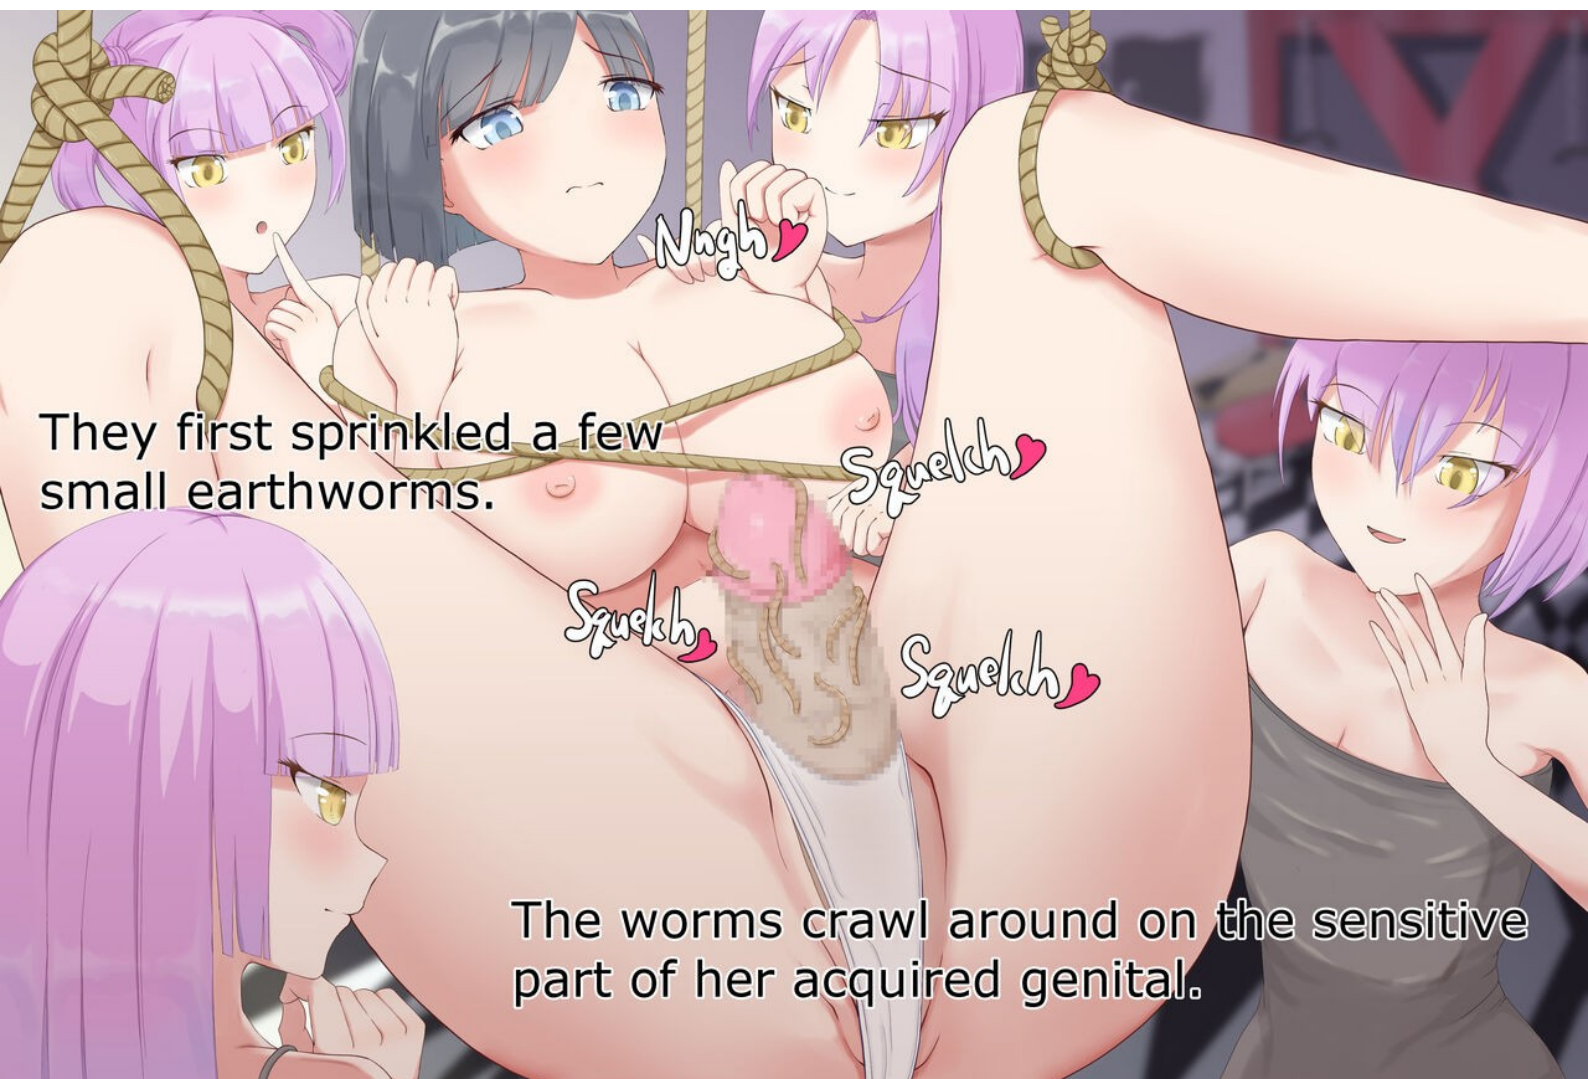

Although she had to pay
a price for that safe return.

She was given a vial of mysterious fluid.

She immediately figured out what it was by looking at changes in the body.

It was a futanarizer.

They first sprinkled a few small earthworms.

The worms crawl around on the sensitive part of her acquired genital.

One earthworm shoves its head
into the urinary duct.

Nngl!♥

Pricks♥

Every squirm of the worm gives
nothing but sharp pleasure to her.

Next thing that showed up
was their pet

And they told her that they're gonna
free her if she sates its hunger.

It licks her dick with
its big tongue.

After savoring it for a while,
the pet sucked on
her saliva-covered dick.

Intense suction of the cockhead makes
her squirm in genital sensation.

Its reciprocatory motion gets faster.

Its tongue and the earthworms stimulates her dick in unpredictable rhythm.

And she reached orgasm.

But the pet doesn't
look satisfied.

She started to wonder how long
her body would hold out.
