LET'S
JUMP
INTO
THE
SEA
AND
CATCH
ONE!

AH SHIT!
I SO
WANNA
FUCK A
MON-
STER
GIRL!

WOAH
THAT
SOUNDS
BAD...NO!
I MEAN,
WHAT I
HEARD
WAS...

I THINK
WHAT THEY
MEAN IS
JUST...YOU
KNOW THOSE
FAIRLY
HARMLESS
MANTLE
FORGS THAT
DELIVERYMEN
LIKE US
OFTEN EN-
COUNTER IN
THE MIDST
OF A LONG
JOURNEY?
WELL SOME
OF US MIGHT
TRY TO MAKE
SOMETHING
OUT OF
THEM
WITH PURE
IMAGI-
NATION

THEY
NEVER
SAID IT'S
IN THE
HUMANOID
SHAPE, IT'S
JUST AN
AVERAGE
FORG
(Fog
monster)

SO YOU
BELIEVED
IN WHAT
KEIBU AND
OTHER
PEOPLE
SAID

EVER
HEARD
OF THE
HUMANOID
FORGS?
(Sirens)

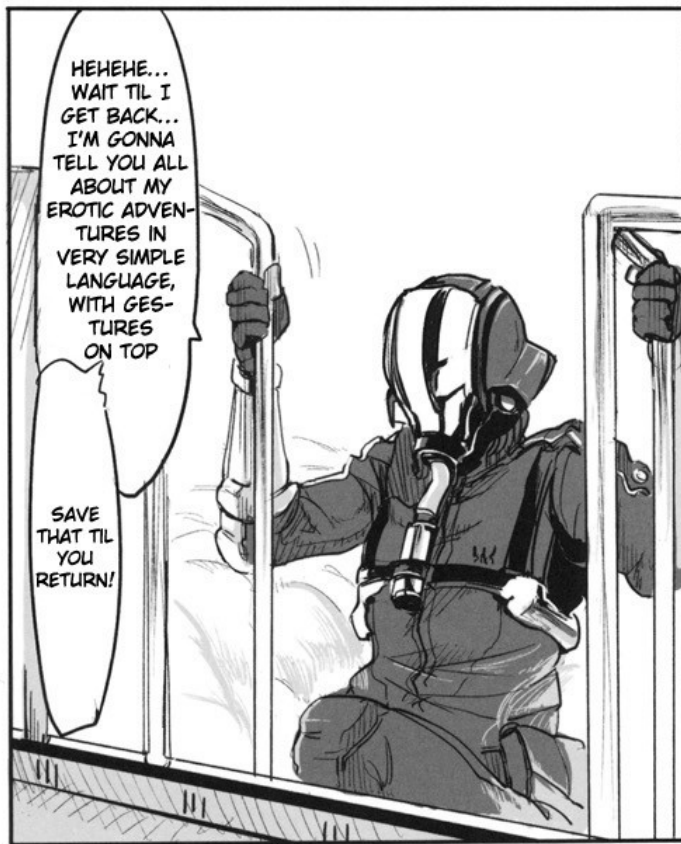

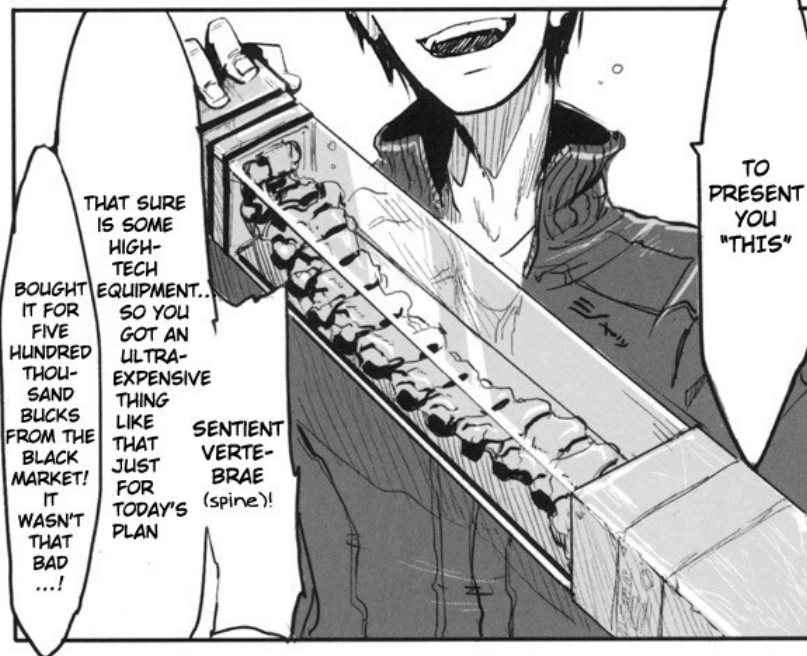

I'M
NOT
CRAZY
YOU DUM-
BASS!
YOU ARE
OUT OF
THE SEA
FOR FAR
TOO
LONG!!

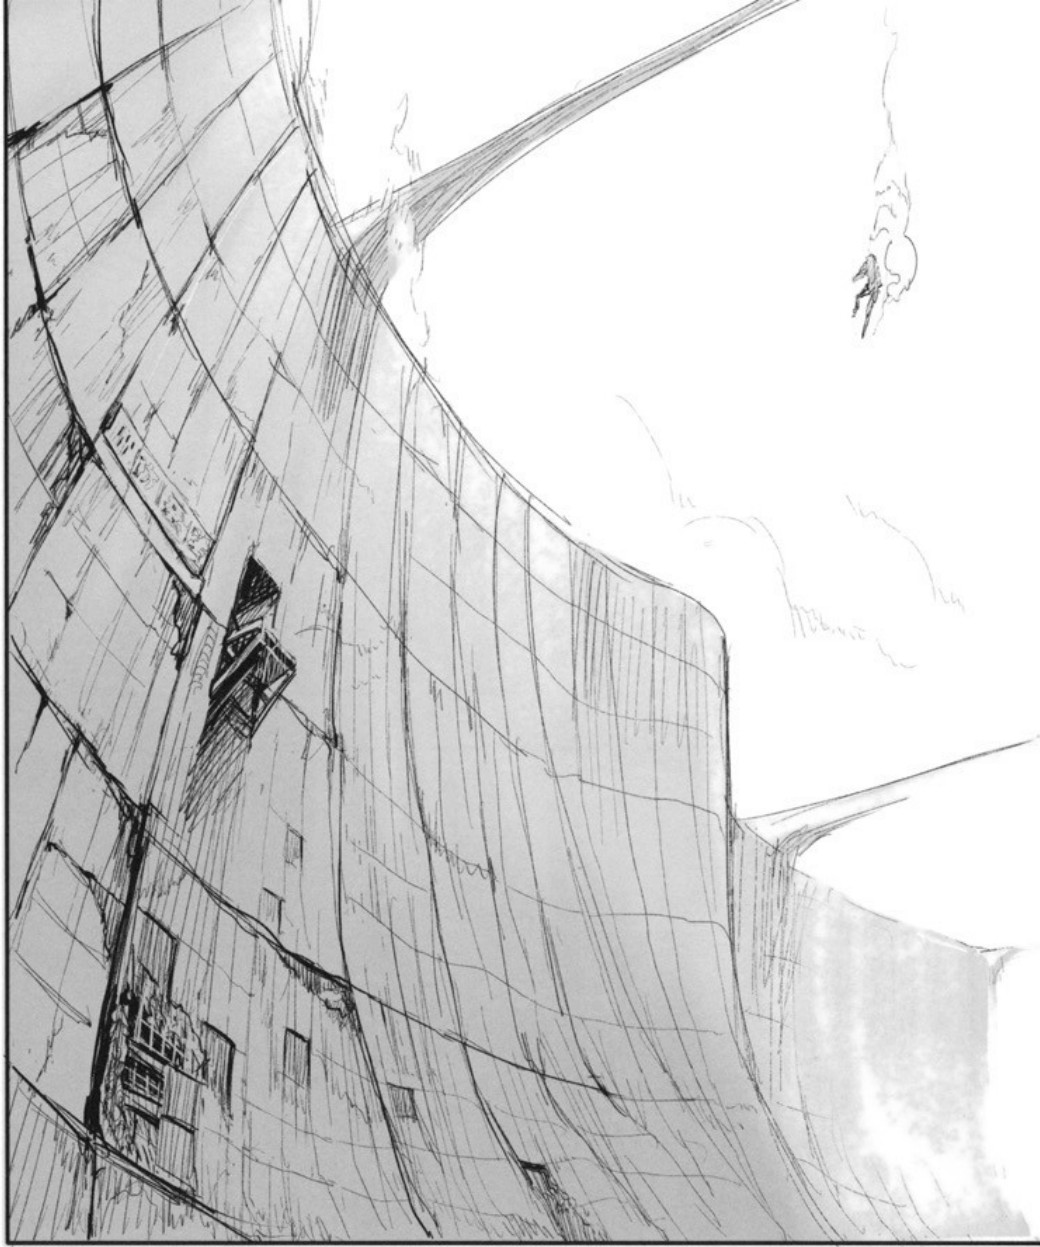

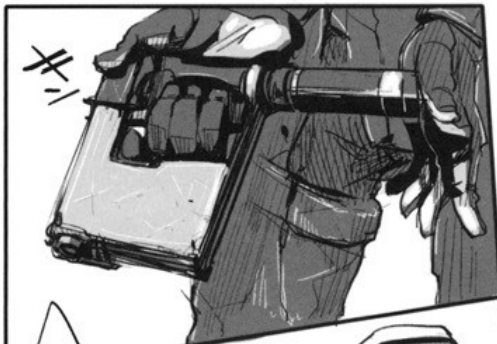

LONG
BEFORE OUR
LAND WAS
ENGULFED
BY THE SEA
AND FOG AND
US HUMANS
RETRACTED
TO LIVE
BEHIND FOG
SHELTERS

THERE WERE
HUMANS
WHO'VE
ADAPTED TO
THE FOG AND
OBTAINED THE
POWER OF FORG
TO BUILD
A PARADISE
SOMEWHERE
UNDER THE
SEA

THAT'S
ONLY A
MYTH WITH
NO BASIS
AT ALL
RIGHT...

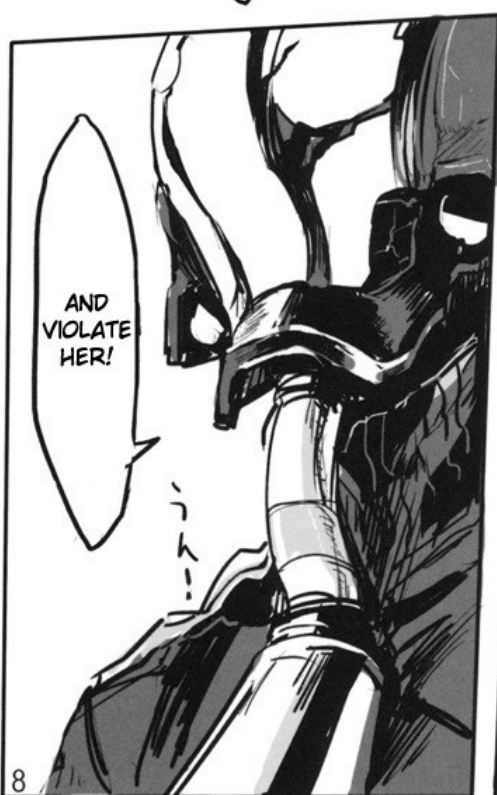

OI OI...
COULD
THIS BE
THE
SIREN
THAT I'VE
HEARD
ABOUT?

IS A
CHICK
!!?

NO...
THIS,

AND
VIOLATE
HER!

ALTHOUGH
SHE'S A
FORG,
THERE'S NO
WAY A BIG
MAN LIKE ME
WOULD DUMP
A FAINTED,
HELPLESS
GIRL AND
JUST STRIDE
AWAY... I'M
GOING TO
TAKE MY
RESPONSIBILITY...

THE
DEGREE
OF MON-
STROSITY
IS HIGHER
THAN I
EXPECTED...
THIS JUST
TURNS ME
ON!

THOSE
LOLITA LIPS
ARE SO
SOFT...THE
LITTLE
TONGUE
INSIDE THERE
HAS JUST
THE RIGHT
SIZE...!

Hah...

Hah...

SHE'S UNCON-
SCIOUS YET
SHE IS GET-
TING EXCITED?
HEHEHE...
EVEN WITH
AN IMMATURE
BODY, SHE'S
STILL FAR
MORE SENSI-
TIVE THAN
HUMANS...

THIS
NIPPLE...
OR SHOULD
I SAY THIS
SUCKLE?
IT'S AL-
READY
GONE
HARD...

OH,
OH...!/?
SO A
SUCKLE
NIPPLE?
IT'S
SUCKING
MY
FINGER...

BOW

70 IL >)

I'LL
MAKE
SURE SHE
GETS
LOT~S OF
DRILLS
WHILE
SHE'S
STILL
YOUNG
...!

I'M GOING TO SHOW YOU LOTS OF FUN STUFF I CAN DO IN HERE ...!

WOAH SO WET... AND ONLY FROM RUBBING HER NIPPLES

HEHEHE... WHAT A CUTE PRETTY FACE! YOU JUST MADE YOUR BIG BROTHER SUPER EXCITED!

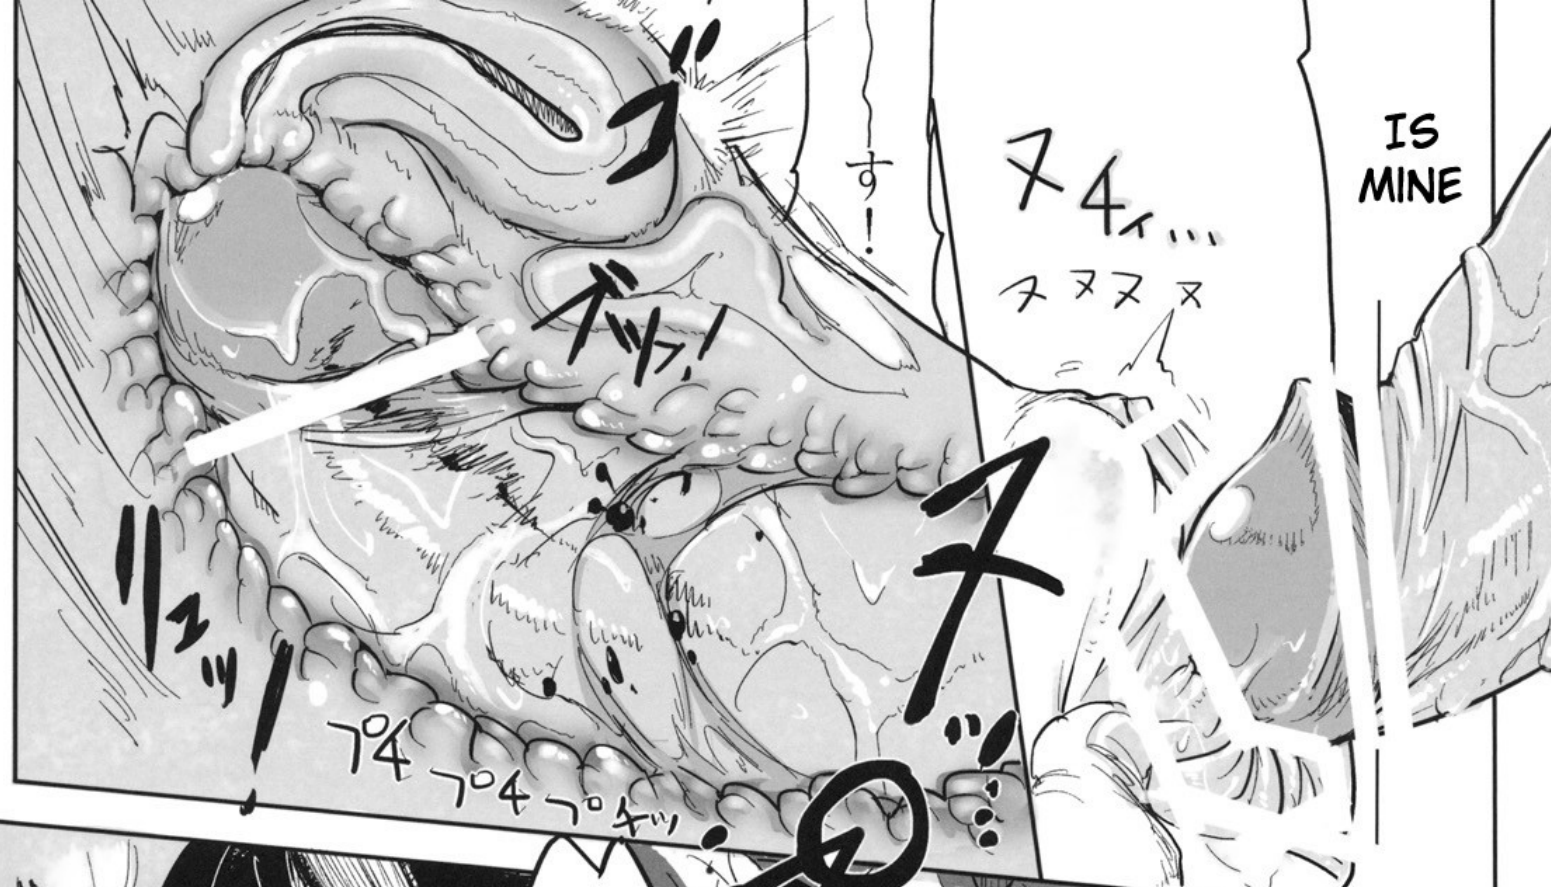

YOU'VE GOT A PRETTY STRONG SCENT DOWN HERE... THIS JUST TURNS ME ON!

OH? DID YOU WAKE UP ALREADY... HUMAN SEDATIVES DON'T WORK THAT WELL ON YOU EH

WOAH ...

WHA...
WHAT'S
THIS
...!

SHE
HAS ALL
THESE
SUCKLES
ON THE
WALLS
OF HER
PUSSY...

OH? YOU
LIKE THE
WAY MY
COCK IS
BANGING
YOUR
UTERUS?

HEHEHE
...THAT'S
GOOD...

IF YOU LIKE
THAT, YOU'LL
ALSO LIKE IT
WHEN I
SHOOT OUT
MY SEMEN!

OOH
...
HER
PUSSY
JUST
WON'T
LET ME
GO...

I'LL BE
CONSTANTLY
USING
THAT
PUSSY
FROM
NOW
ON...

HOW WAS IT?
HOW DID IT
FEEL TO BE
RAPED BY A
HUMAN, AND
TO HAVE
YOUR LITTLE
PUSSY ALL
PULLED OUT
WITH MY
COCK? YOU
HAVE A
REALLY NICE
PUSSY
THERE...

HEHEHE...
LOOKS
LIKE
IT'S NO
LONGER
NECESSARY
TO HAVE
YOU RE-
STRAINED

AS MY
SPECIAL
CUM
POT...!

AL-
RIGHT,
I'M
CUM-
MING...
SWAL-
LOW
EVERY-
THING!

HEHE...
YOUR
TENTACLE
TECH-
NIQUES
ARE GET-
TING
BETTER

＃＃＃＃＃＃＃

トロ……

SUCKING
MY COCK
WHILE
BREAST-
FEEDING
YOUR BABIES,
WHAT A
PERVERTED
MOTHER...
WHAT IF
THEY GROW
UP
LIKE YOU?

HEHEHE...
BUT THEN,
THAT'LL
JUST TURN
ME ON EVEN
MORE...!

AND MY
FOLLOW-
ERS
(Legion)!

MY
PARA-
DISE...

YEAH...
IF THERE
ISN'T ONE
ALREADY,
I CAN
CREATE
ONE
MYSELF
...

I HAVEN'T
FOUND THE
MYTHICAL
PARADISE,
BUT I HAVE
MADE IT A
FEASIBLE
REALITY

A CROSS
(Hybrid)
BETWEEN
HUMAN
AND FORG...
A NEW
HUMAN
SPECIES
THAT WILL
ADAPT
TO THE
FOG...

FORGRAFFITI

テントクルス タクソノミー

Tentacles Taxonomy

フォルグ

FORG

■ Formal name: Fog org (The Ones Who Diffuse Fog)

A generic name for the various organisms that inhabit the Outer Seas. The majority of the species that were reported, make home in the medium or the superficial layer of the ocean. They acquired the ability to absorb Fog which facilitates their metabolism, growth and regeneration. The Higher forms of Forg possess high intelligence, and has developed sensory organs other than the eyes to capture visual information. After incidences of Forg assaults to cargoes and infrastructures, the Forgs are declared as noxious organisms by humans.

■ OctoForg

8 tentacles lined with suckles, and the giant lense-like organs laying laterally to the eyes, are the telling features of this Higher form of Forg.

Their tentacles support movement and hunting, and consist of firm, resilient muscles. In addition to the ability of regenerating itself, the tentacles can also absorb Fog to become enlarged.

With an appearance similar to a human female, as well as having genitals, it has confirmed that it is possible to mate an OctoForg with a human.

Having a strong curiosity and high intelligence, the OctoForg may proactively approach her target of interest. With adequate training it is possible for an OctoForg to be adopted.

The number of witness reports of OctoForg is extremely low and this leaves them somewhat mysticised. In fact traces of their existence can only be grasped through the records in ancient literatures.

□ I feel using an Octopus as the heroine in a tentacle doujin is a suitable choice. There are 3 main charms about an Octopus. Namely, "Cognition", "Maternity", and "Tentacles".

Octopi are among the most intelligent forms of invertebrate animal. Ideally I think they should have some ways of communicating their intentions to us, but that would be too much to ask for. If an Octopus possesses comparable intelligence to cats or dogs, goes to bed with a young lady, and engages in a rather frivolous situation then (the rest is left to your imagination)

It would seem that Octopi bears no correlation to Maternity, but they are known to hold the eggs they laid in the palm of their hands in the literal sense. Would anyone be untouched, seeing an Octopus dancing along the fresh ocean currents and endearing its eggs with all its care? Such sympathetic feelings towards non-human species, is a key quality that should not be overlooked in the fans of the fetish known as Monster Girls.

Tentacles. A tentacle makes an octopus octopus, and comparing to that of other species the tentacles of an octopus has a greater capacity for movement, and apart from functionality it also has a cute and somewhat elegant design to its appearance. It must be difficult to coordinate the movement of 8 tentacles simultaneously, but it can be probably regulated by muscular inhibitory impulses descending from the brain. The tentacles can also be thought of as each having some intelligence on their own, thus categorising Octopus under the Cephalopod Class is just ingenious.

Size comparison.

□ Initial draft

Because she looked so toddler, I made her look a few years more mature in my current design. Say she was 6 here, then she would be 8-10 in the final draft.

■ Mantle Forg

A Middle form of Forg with its characteristic flat body. There are flat tentacles on its head, which the Mantle Forg uses to hunt and communicate. There are striations that appear like big eyes on its dorsal surface, a feature that is sometimes seen in other Middle forms of Forg as well, and is thought to be used as a means of bluffing or identifying other Forgs.

Often floating on the surface waters outside of the cargo exchange ports, there are plenty of witness reports of the Mantle Forg.

Due to their mild and harmless nature they have been crossed off the list of Creatures To Be Deported, and they are often tamed by humans.

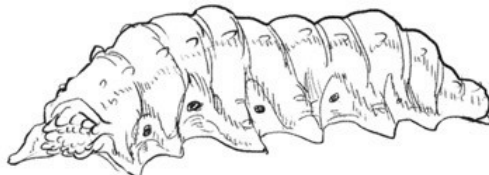

Resembling humans in appearance, as well as having genitals, they are sometimes captured for sexual purposes.

■ Blob Forg

A Lower form of Forg with a thin, long, soft body.

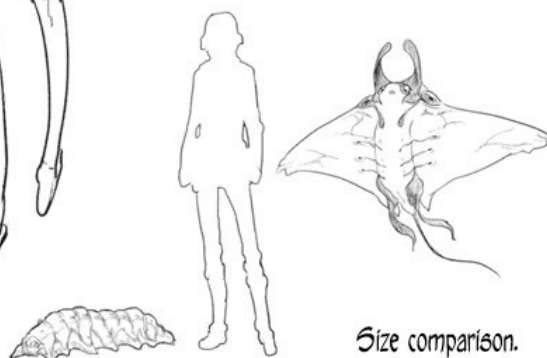

Living on the ocean floor of the Outer Seas, they feed on the Fog and Fog-borne plants, as well as excrement from other Forgs. In turn they are usually fed on by Higher forms of Forg.

These are by no means proactive creatures, but when a prey is at sight the Blob Forg is able to contract its muscles and leap onto its target prey via a spring action. It can extrude neurotoxin-containing tentacles from its anus as a means of bluffing or attacking; the toxin is dangerous if exposed to naked skin.

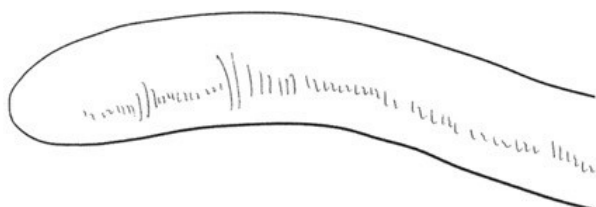

■ Crustacean Forg

A Middle form of Forg with a hard armour covering its body. A powerful warrior, it uses its rigid claws to attack and hunt. Living on the ocean floor and around Fog Shelters, the Crustacean Forgs often wreck and damage nearby infrastructures and power lines, and as a consequence humans would have to send out armed squads to clear the area.

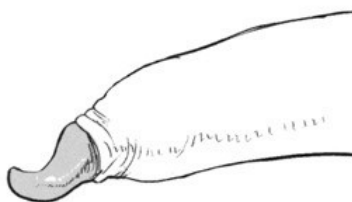

Size comparison.

Categorising by Shape

■ Primitive

The most basic form of tentacle. It has a clean and simple appearance which, no doubt, is adored by many in the big wide world. Their function tends to be movement restriction and body constriction.

■ Exposer

A two-layered structure enables this tentacle to expose its internal tentacle through the opening of the superficial layer. There exists subspecies that will extrude multiple internal tentacles, and the shape of the anterior aspect of the extruded tentacle is quite variable from one to another.

■ Tooth

A tentacle equipped with firm claws or teeth. They have a strong grip. Powerful in combat, they specialise in stripping clothing and armours off from the victim.

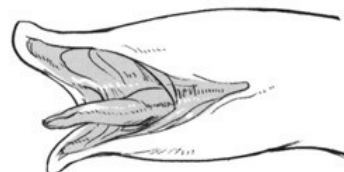

An Illustrated Handbook of Tentacles

■ Being able to achieve the impossible goal that humans could not achieve, and never ceases to amuse our fellow men, is the existence known as tentacles. This chapter devotes to describe the charms that tentacles possess, in a systematic manner, so that all of us will have a better understanding of our friendly neighbours. Rather than constructing a single compilation of the countless features of tentacles, I will arrange these features into several large categories. Under these large categories, individual features will be listed as according to the respective shape, texture, function and so on, and the variations and combinations that could occur based on these fundamental features would be left to the reader's imagination. This chapter would hopefully aid the reader to develop a more thorough understanding of the tentacles.

■ Penis Head

The tentacle that takes on the shape of a human penis. It has been confirmed that there exists subspecies that developed specialisations around the Penis Glans. The Penis Head tentacle is often coupled with the ability to ejaculate.

■ Split Mouth

A mouth-shaped tentacle. Apart from penetration, it can perform various other tasks such as sucking and egg-laying. There exists stand-alone types of Split Mouth which resemble the appearance of leeches, and these stand-alone types seem almost intelligent.

■ Tender

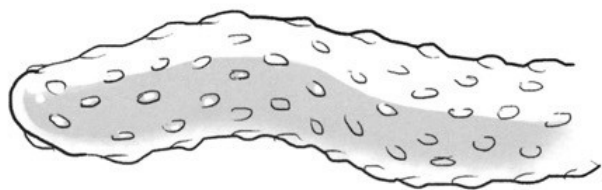

A tentacle with a number of soft projections. These prefer protruded objects such as nipples more than the vagina. The Tenders are among the most gentle tentacles.

■ Eater

Very hardcore tentacles. These possess the combined features of an Exposer and a Tooth. They are often quite large, and are more resilient to side hits compared to other types of tentacles.

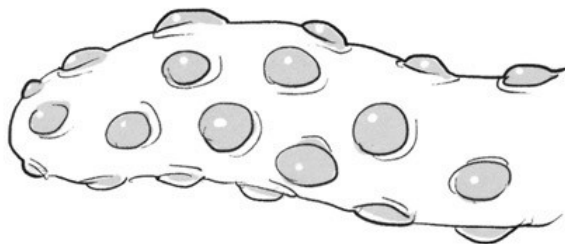

Categorising by Texture

Here we group the tentacles according to their surface Textures. Combine the tentacle's Shape at their anterior aspect with these Textures and we will get a large pool of the various types of tentacles.

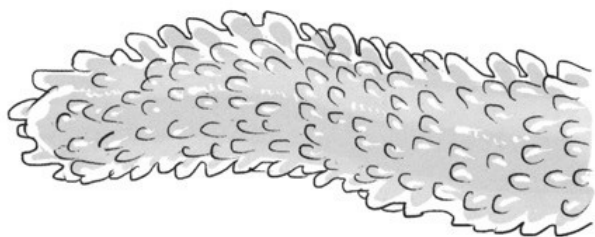

■ Wart

Hardened, elevated spots grow on its surface. Blends well along with other types of tentacles, the Wart has some fine additions over the Primitive tentacle, and stands as your most typical tentacle Texture.

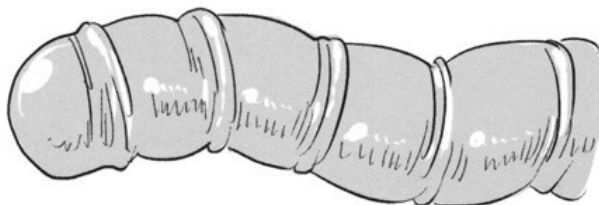

■ Knob

A lumpy surface. It looks as though they have spherical knobs half-buried into their surface, and these spherical projections are larger than that of the Wart. There exists subspecies, that are capable of constricting these knobs, and extending them out like little tentacles.

■ Swan

Packed with countless villi. The projections are longer, and denser than those on the Wart. Many species of the Swan secrete lubricants, the true value of which is only fully realised when it is inserted into the body.

■ Knot

Its surface is divided into nodes of equal length. These nodes give its target a regular pattern of excitatory stimulation. Some of these nodes can take on the appearance of the Penis Glans, others can be quite rigid like an Armour.

■ Skeleton

A fairly clear, transparent tentacle. These are usually conjured by Slimes or similar species that do not have a definite form. The body-to-body junction with the target during intercourse, as well as the flow course of semen during ejaculation, can be well observed.

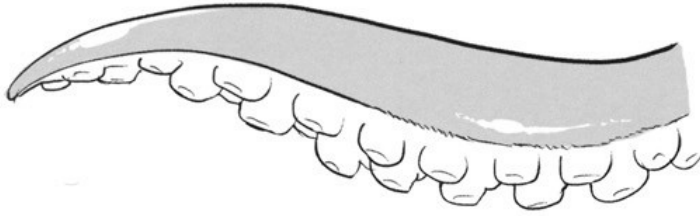

■ Sharp

A hard, streamlined surface. Many Sharps are capable of phasing their anterior end into other shapes. Although a new member of the tentacle family, the well-polished appearance has earned the Sharp quite a lot of popularity.

The Surface Patterns of Tentacles

Although mainstream tentacles all have coin-shaped Patterns on their inferior surface, there exists quite a few exceptions with more unique Patterns.

■ Octopus

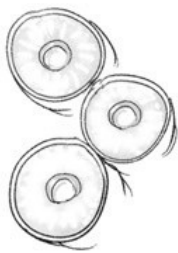

Octopus tentacles. The inferior surface is packed full of suckles just like an octopus. These are the extension of an octopus, or more often, a creature that resembles an octopus.

■ Squid

Squid tentacles. The appearance is just like that of a squid. These are connected to the identity of a squid, or more often, a creature that resembles a squid.

Octopus

Squid

There are marked differences in shapes and properties between the suckle of an octopus and a squid.

The suckle of an octopus is cylindrical, and its mechanism of suction employs the common principle of suction. Also, it sheds its surface mucosa regularly to maintain the strength of the suction.

The suckle of a squid is spherical and is encircled by stiff thorny rings. This occludes to grip onto the target to achieve the suction effect.

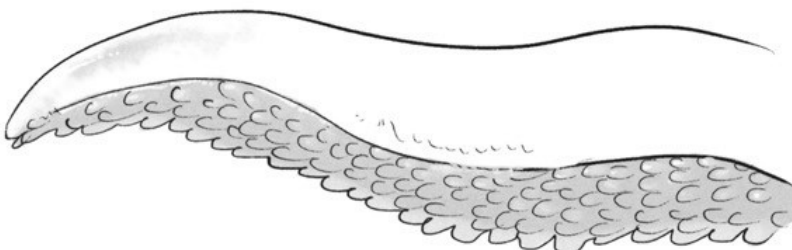

■ Worm

A tentacle that resembles a larva, and has dense villi and sharp claws on its inferior surface. These are often extensions from an worm-like creature, which incorporates a bit of a worm-sex fetish into play.

■ Brush Worm

A rather smooth superior surface compared to the villi-packed inferior surface. The Brush Worm is a major Surface Pattern, and its utilities has developed far beyond that of the mere tentacles, and has evolved a wide range of varieties.

Categorising by Usage - Furniture Chapter -

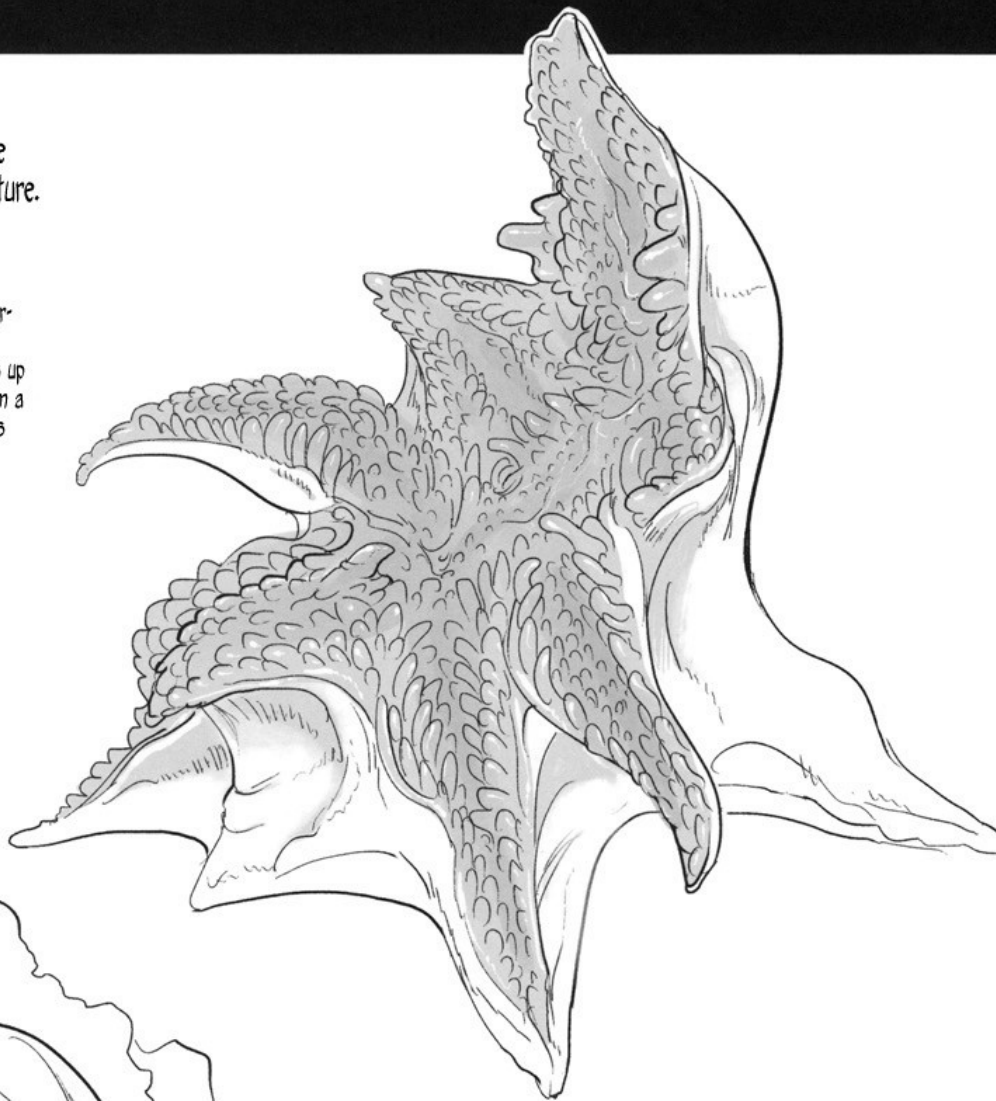

Some tentacles acquired a much more approachable form to bewitch humans. That is the form of furniture.

■ Chair

Generic name: Tentacle Seats. The result of specialised evolution to target humans as its prey. The Tentacle Seat has obtained an appearance similar to that of a chair.

The Chair commonly derives from the Brush Worm type and opens up just to fit the outline of a human body, although some do develop from a combination of other types of tentacles. Also, there exists subspecies that allow humans to lay flat onto the Seat in a prone position.

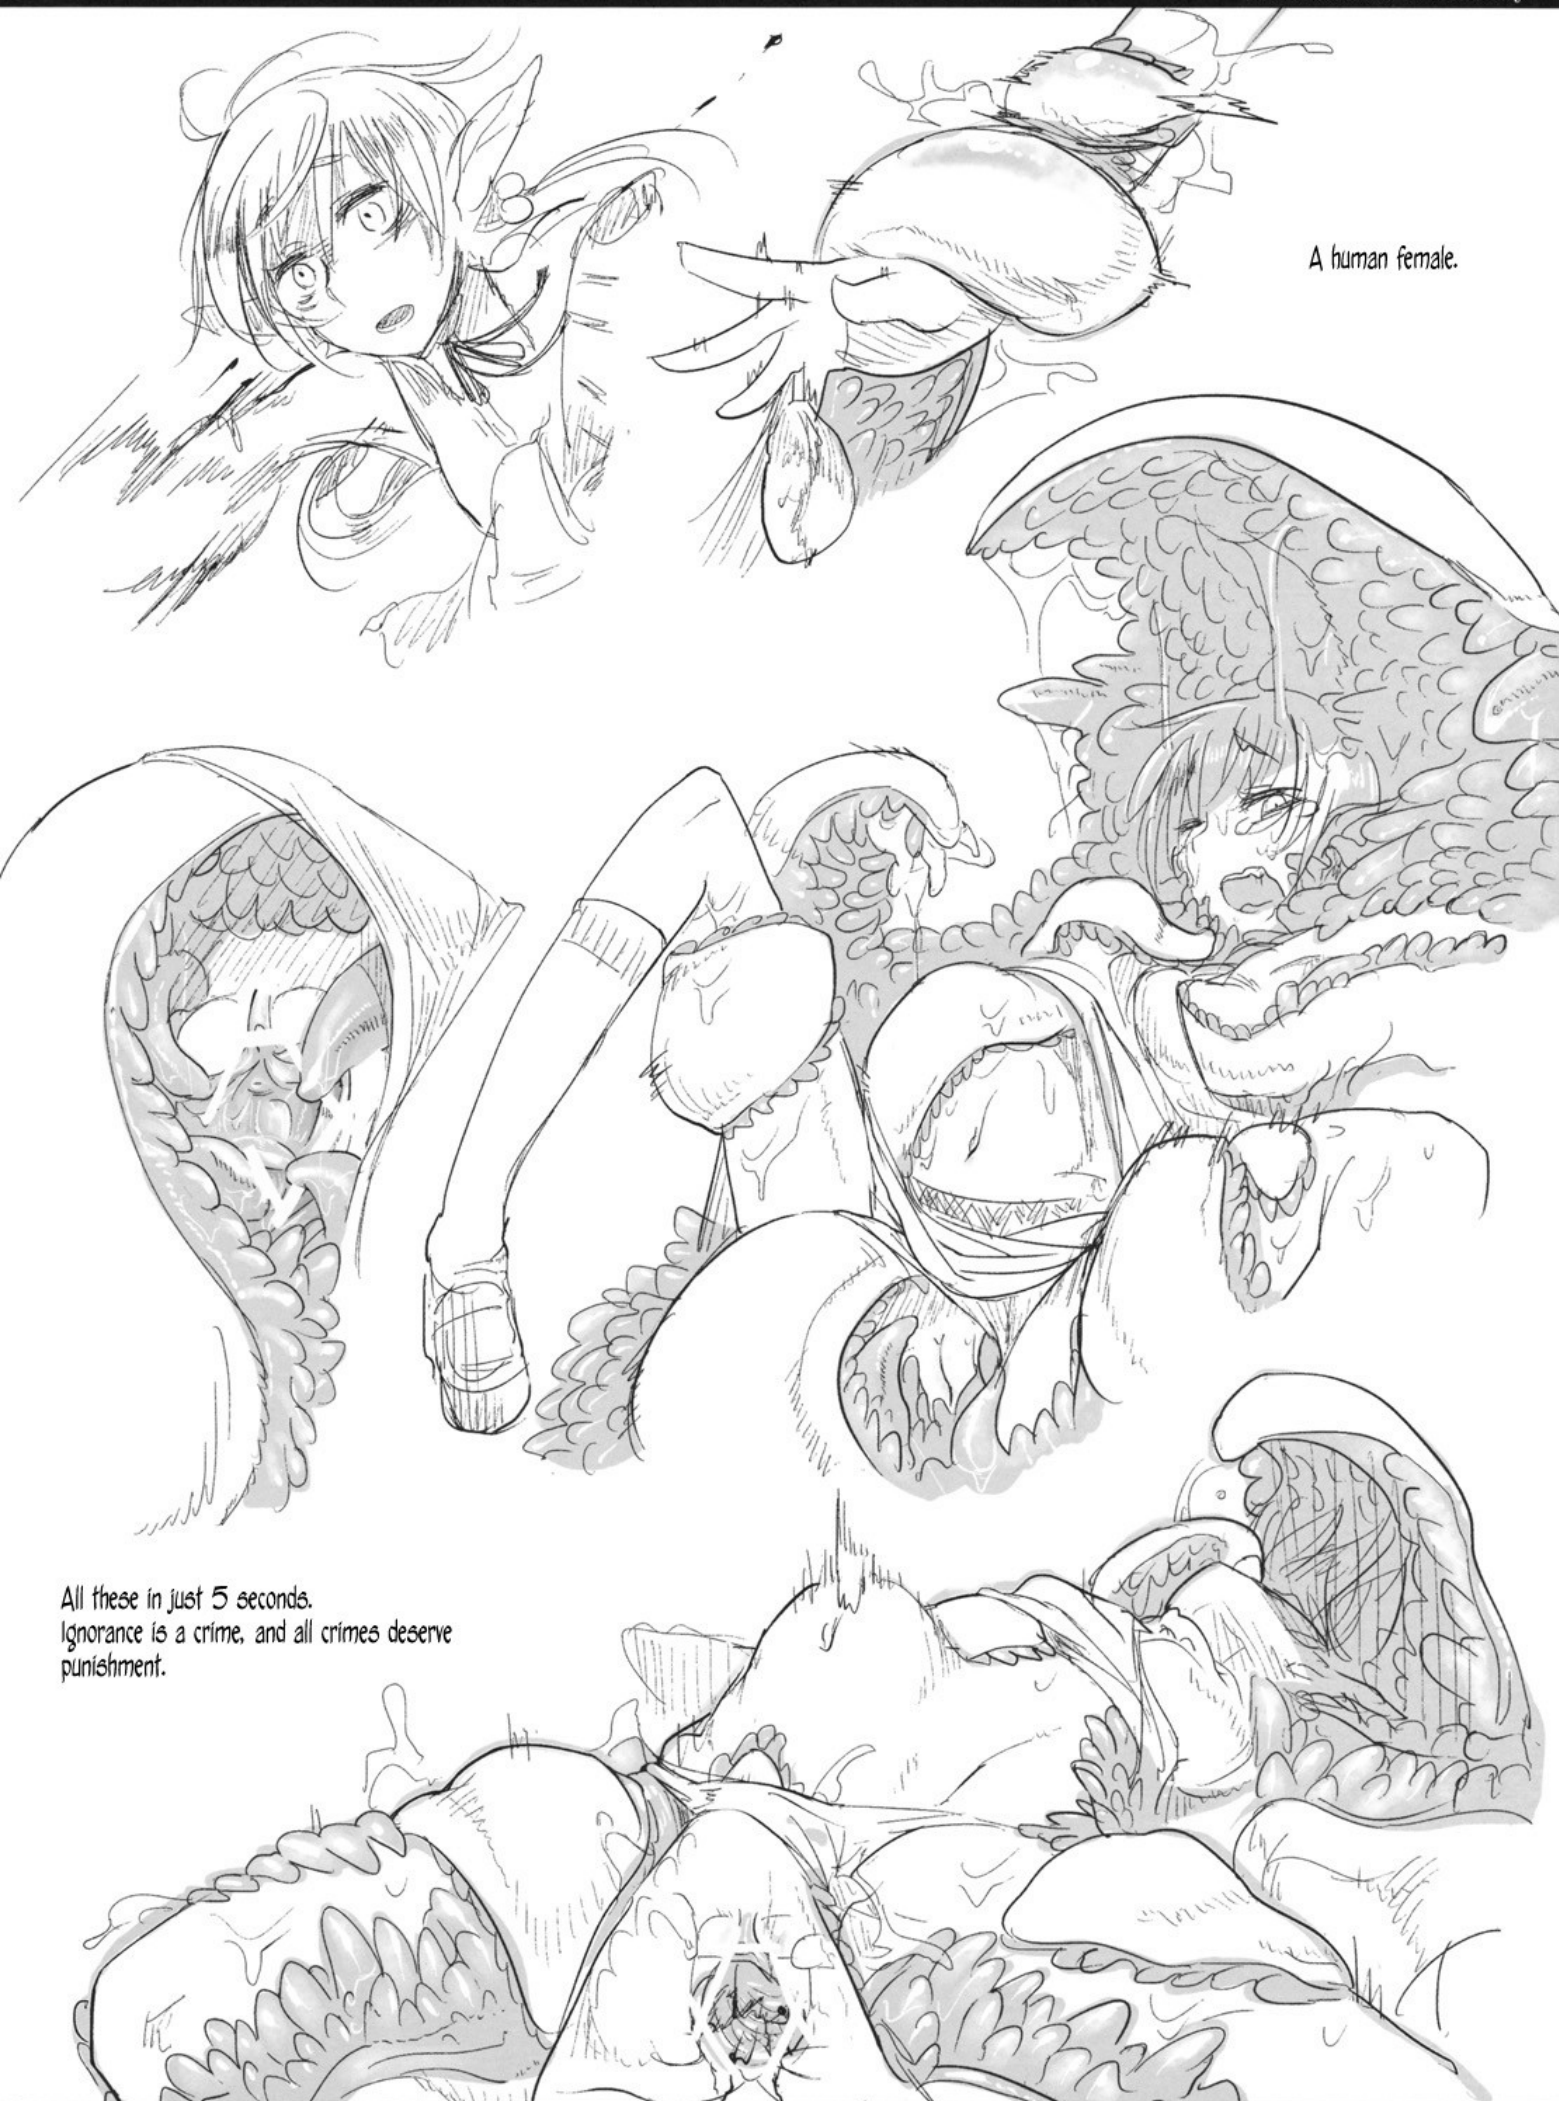

Most of the time the Chair stays quite still. It awaits for ignorant humans to pass by.

[WAH...WHAT A LARGE CREATURE... IT DOESN'T LOOK VERY ENERGISED. IS IT HUNGRY?]

There is only one thing that is of interest to the Chair. Yes...

A human female.

All these in just 5 seconds.
Ignorance is a crime, and all crimes deserve
punishment.

Categorising by Usage - Item Chapter -

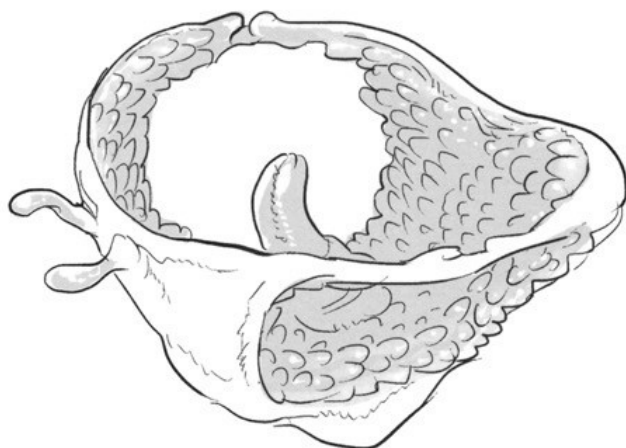

Tentacles that are active as great partners of humans. They have developed a rather weird, symbiotic relationship with the humans.

■ No Problemo

Generic name: Tentacle Panties.

Tentacles that underwent specialised evolution to be able to wrap around and closely adapt to the buttocks. Remarkably useful on jammed free-ways and natural disaster zones. There is an unpleasant extension that hangs down from its underside, and its purpose is quite self-explanatory as you look at it.

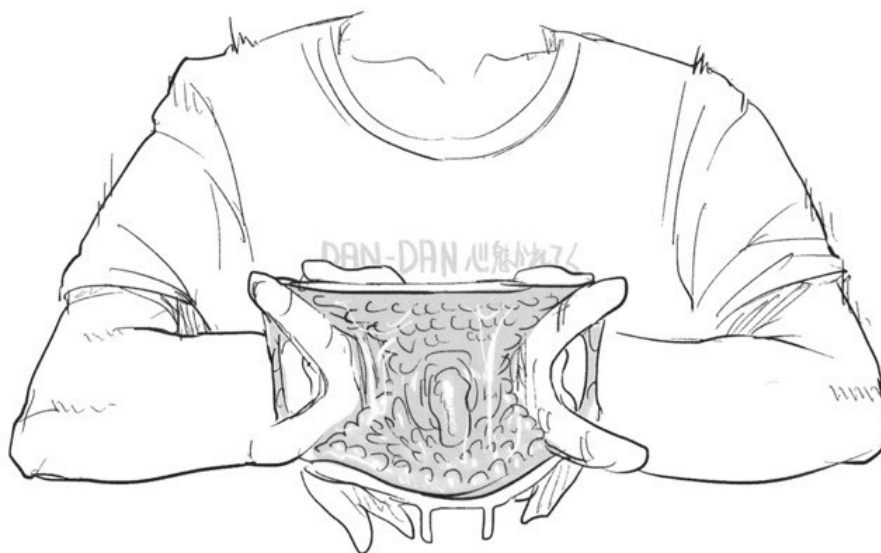

■ Lo Problemo

Japanese people can make anything smaller.

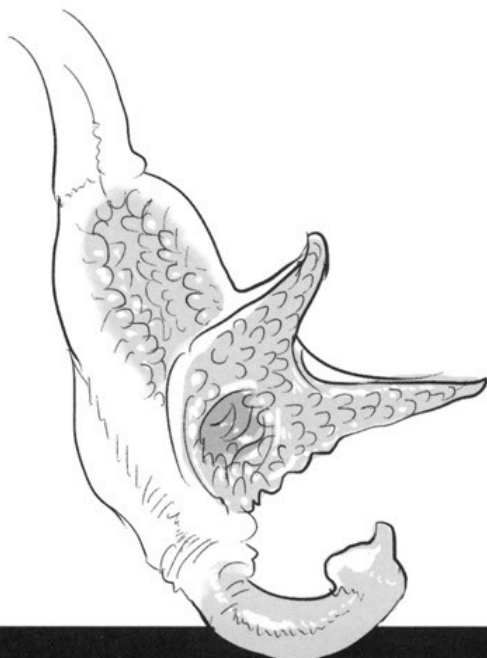

The Lo Problemo is modified from No Problemo, existing as a miniaturised species.

The low mass of Lo Problemo has compromised its suction power, therefore it is necessary to ask the assistance of a nearby adult if you want to wear this.

■ Enema Star

Should be considered as the male counterpart to No Problemo, the Enema Star is a pouch-shaped tentacle. It offers the chance for even males to appreciate the experience of a tentacle Ryoujoku [note: "Ryoujoku" means "insult" in Japanese, should I assume everyone is familiar with this term?]. Although it requires quite a bit of courage, men who long for pleasures of the unknown and dare to purchase this product, henceforth walking onto a deviated path, are never too few.

Parasite Suits

■ Suit

Generic name: Tentacle Suit. Tentacles that appear in the form of clothing. The interior of the Suit is lined with countless villi, and allows for some satisfaction of the user's cosplay fetish. There may be slime-like organisms attached to the Suit, or more often, some sort of artificial organisms. The Tentacle Suit is a best match for the Fallens.

■ Armour

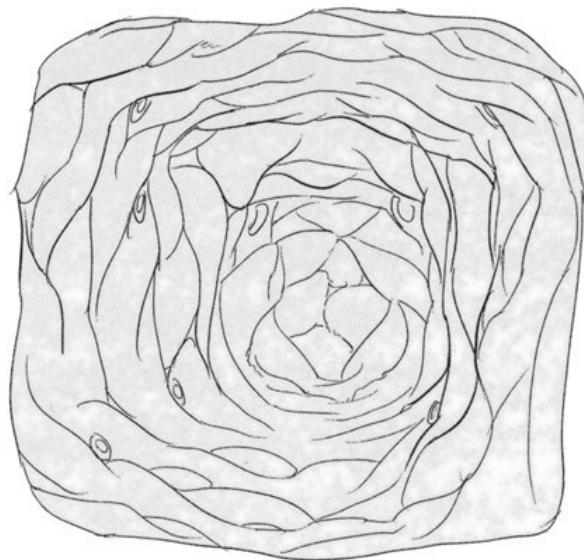

Generic name: Tentacle Armour. As with the Suit this is a Parasite Suit with masses of moving villi on its interior surface. The cursed armour that will grant power in exchange for the warrior to be continuously insulted by tentacles is a scenario in which the Armour might appear, other situations where this can appear include the one where the female warrior is insultingly interrogated.

Categorising by the Identity

The Identity refers to the organism to which the tentacles are attached to. So what sort of appearance might that organism assume? On a kind note, outlining too much details of the supernatural existence that is the tentacles, would only undermine their mysterious charm. Here we shall try to predict just some of the possible identities of tentacles, and differentiate them here in our Illustrated Book.

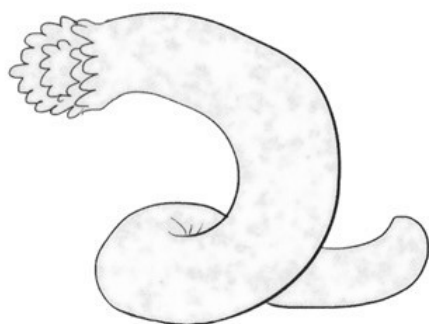

Spatial-Type ■

A space with flesh walls. The common trend is to have the tentacle stretching out from the flesh walls. The flesh walls are usually the result from either modification of an existing space with supernatural forces, or that this organism has teleported itself forth.

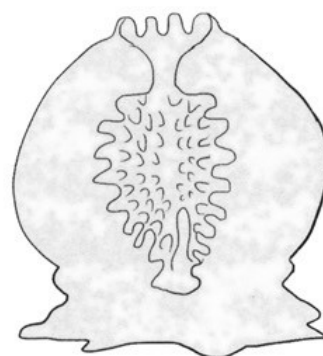

■ Singular-Type

The type where the tentacle itself is the entire organism.

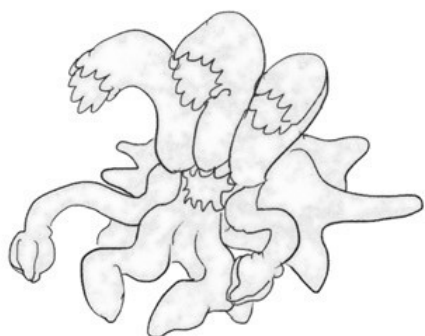

Internal-Organ-Type ■

The organism has tentacles inside its internal organs, and it consumes its victim.

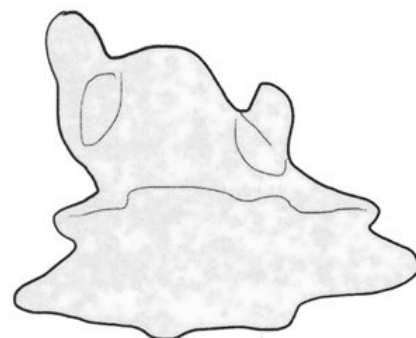

■ Group-Type

Multiple tentacle groups joined on their ends, into one single organism.

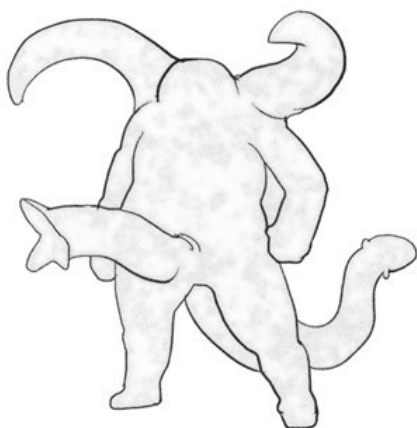

Amorphous-Type ■

A type with no fixed form, and may even morph into non-tentacle shapes.

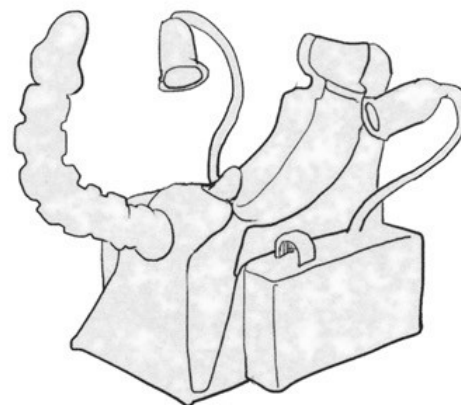

■ External-Organ-Type

This is simply the growth of tentacles on an external part of the body.

Inorganic-Type ■

Inorganic, or artificial tentacles.

Scylla as an Assassin.

I played around with the ideas of Arabian elements and it turned out very well in the *Octopus Armour*. No matter how dangerous, I just wanted the belly and the armpits...I mean the belly and the sides of the ribs to be exposed.

Most of people would think of the *Scylla* when they hear *Octopus Girl*, however I personally like the type where the tentacles are growing on the girl's head.

But having sketched a *Scylla* I find she's not that bad...There are a lot of free spots in the lower portion of her body for things to be put on.

No sexual puns intended.

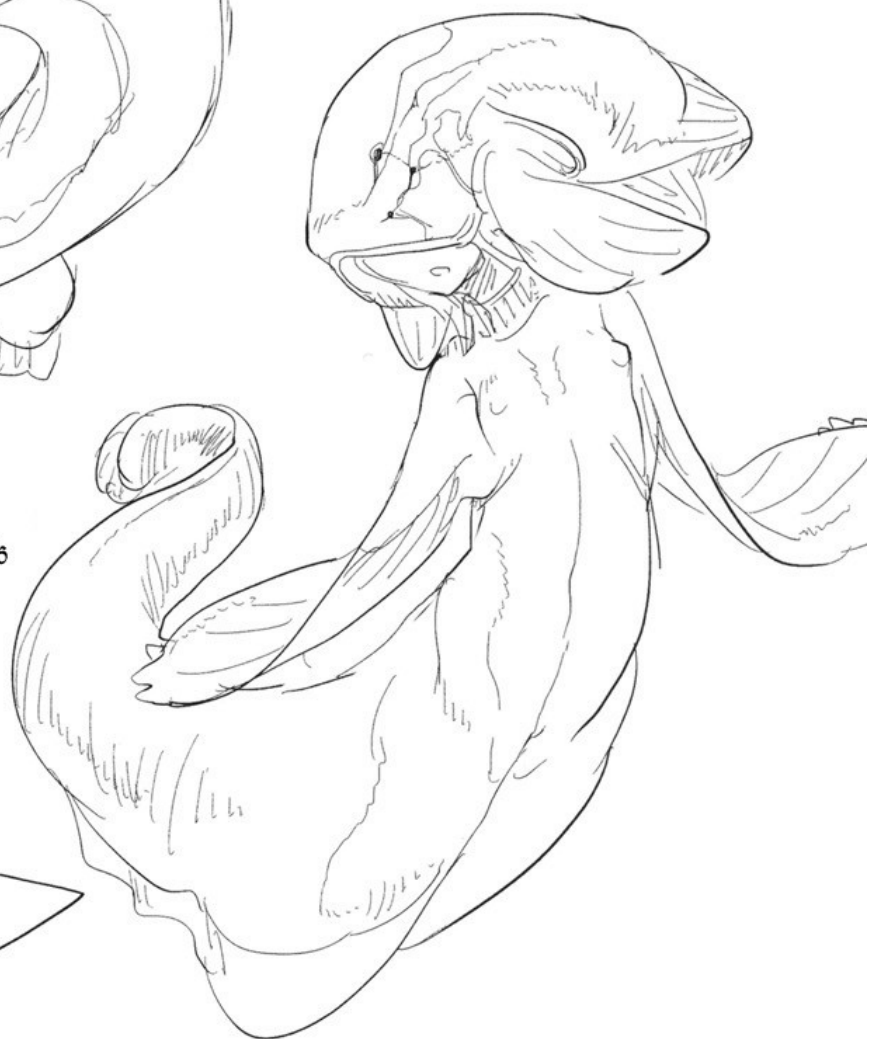

The Skeleton of an OctoForg.

Not exactly the extent of calcification that you would expect from an invertebrate.

Electric Eel. The silly fact that it can get electrified by itself is so cute.

The Electric Eel has a poor vision, therefore its eyes are covered. Hmm, the visor made her so much easier to draw, now I know that's cheap on my part, but let's keep it simple.

Tiger Shark! Eel! Octopus!
SHS Seafood Combo. I, I didn't only want to do this!
(note: possibly an imaginary line from the Octopus?)

When Monster Girls of different species communicate, their hierarchy probably plays an important role in dictating their respective behaviour. So Tiger Sharks and other Sharks would be completely dominating, a Sea Cucumber Girl would spend the rest of her life doing cleaning jobs, and a leader of a small team would be as far as an Octopus Girl can get, how vivid the imagery!

I quite enjoy the theme of Marine Life so I should want to create another doujin around this theme at some point in time.

Colophon

■ Hi there, I am one of the members of SHIS, Z Ton.

It's a weird tentacle doujin that I brought to you this time.

Originally I had in mind to do a very intense Ryona [note: "Ryona" is basically "Ryoki", a genre which involves almost exclusively a human girl physically/psychologically insulted by an offender, typically with blood everywhere] story where a human girl is captured and abused by some monster under the same settings, but at some point in time I felt like I just wanna do a story with a great deal of awful things are done to some Monster Loli Girl so that's how it took place.

In this doujin I've enriched the Column [note: refers to the "Illustrated Book" section with all the settings of Monster Girls] that has received a lot of positive remarks from the previous publication. The Tentacle settings mentioned in the Column serve only as a brief introduction to the topic and might be different from what other people. Please be aware that some of things depicted in this doujin are quite fictional. Having put that note aside, tentacles are treasures left to us by the great progenitors in the genre of tentacles, and are the shared property of all human beings.

This doujin is only the beginning of my agenda, it would hopefully get more people to be interested in Tentacles and Monster Girls, with that we'll see more artists drawing Tentacles and Monster Girls, from there we might have some Mad Scientists addicted to this art who would try and create real Marine Monster Girls.
