

N-no!!
Don't
look at
me!!

Huh!?
Taka-
kun!?

Breeding
sessions are
scheduled to
inseminate
the breeding
females.

It was open for
observation so I
went to see
Nana-chan.

To enter a public school,
one was compelled to
participate in a **classification**
examination.

One day, Nana-chan was
chosen and taken away by
a classification official.

Four months later I
heard some gossip about
Nana-chan from a friend.

Her body had been
remodelled to further
produce milk and
children, and she was
being kept in a
girl farm not too far
away.

This girl is my
childhood friend
Nana-chan.

She's a bright,
cute girl with
huge breasts,
and she's the
one I like.

Taka-
kun,
good
morning!
♡

I did not qualify
for gene donation,
so I could only
watch Nana-chan
lose her virginity
and get fertilised
from a distance.

W-wait!!
Taka-kun
is...!
Taka-kun is
watching!!

No,
stop!!

OH, THIS
GIRL IS A
VIRGIN!!
LUCKY ME!
♡

RIP

And then one day Nana-chan was gone from the farm.

Instead, I found her body hanging in the farm store.

Breeding females who can't get pregnant anymore are slaughtered, and their meat sold as food in the store attached to the farm.

Every time there was a breeding session scheduled, I made sure I went to see Nana-chan.

Each time I found myself feeling frustrated and sad, but I was unable to stop myself.

Genetic engineering of her eggs mean that they grow at roughly twice the normal rate.

In 5 months she will give birth to two to four offspring.

Immediately following birth she is reimpregnated, and the whole cycle begins again.

This continues until eventually she is no longer able to become pregnant.

Her remodelled body is almost guaranteed to become pregnant.

Fertilising her basically forces her impregnation.

Once a breeding female is pregnant she will give birth to multiple offspring.

Her pregnant body is cared for by an automatic management system, which feeds her, milks her, and disposes of her wastes.

Now that she was meat, I bought Nana-chan.

At long last, Nana-chan was finally mine.

I wonder what I should make for dinner tonight...
