GURO

I mean it, this gets really graphic, be careful.

Today I'm going to teach you how to get really high on brain chemicals and have a great time.

Hey there! Nice to have you.

Besides, they taste the best at this age, trust me!

As for the ingredients, you need a girl about this old. Well, you could also get an older one if you're so inclined, but I like them like this. They're really easy to handle, see?

Remember, you must fuck her every chance you get. It'll feel like a job at times, but it'll be worth it!

To prepare her, you first have to fuck her a lot of times in order to teach her pleasure.

You need to be careful during this phase because you won't be giving her any drugs that act on the brain. They can really spoil the flavor, so it's a no no!

See? I merely touched her and look at how wet she is. You can say she's well made now and you're ready to move on.

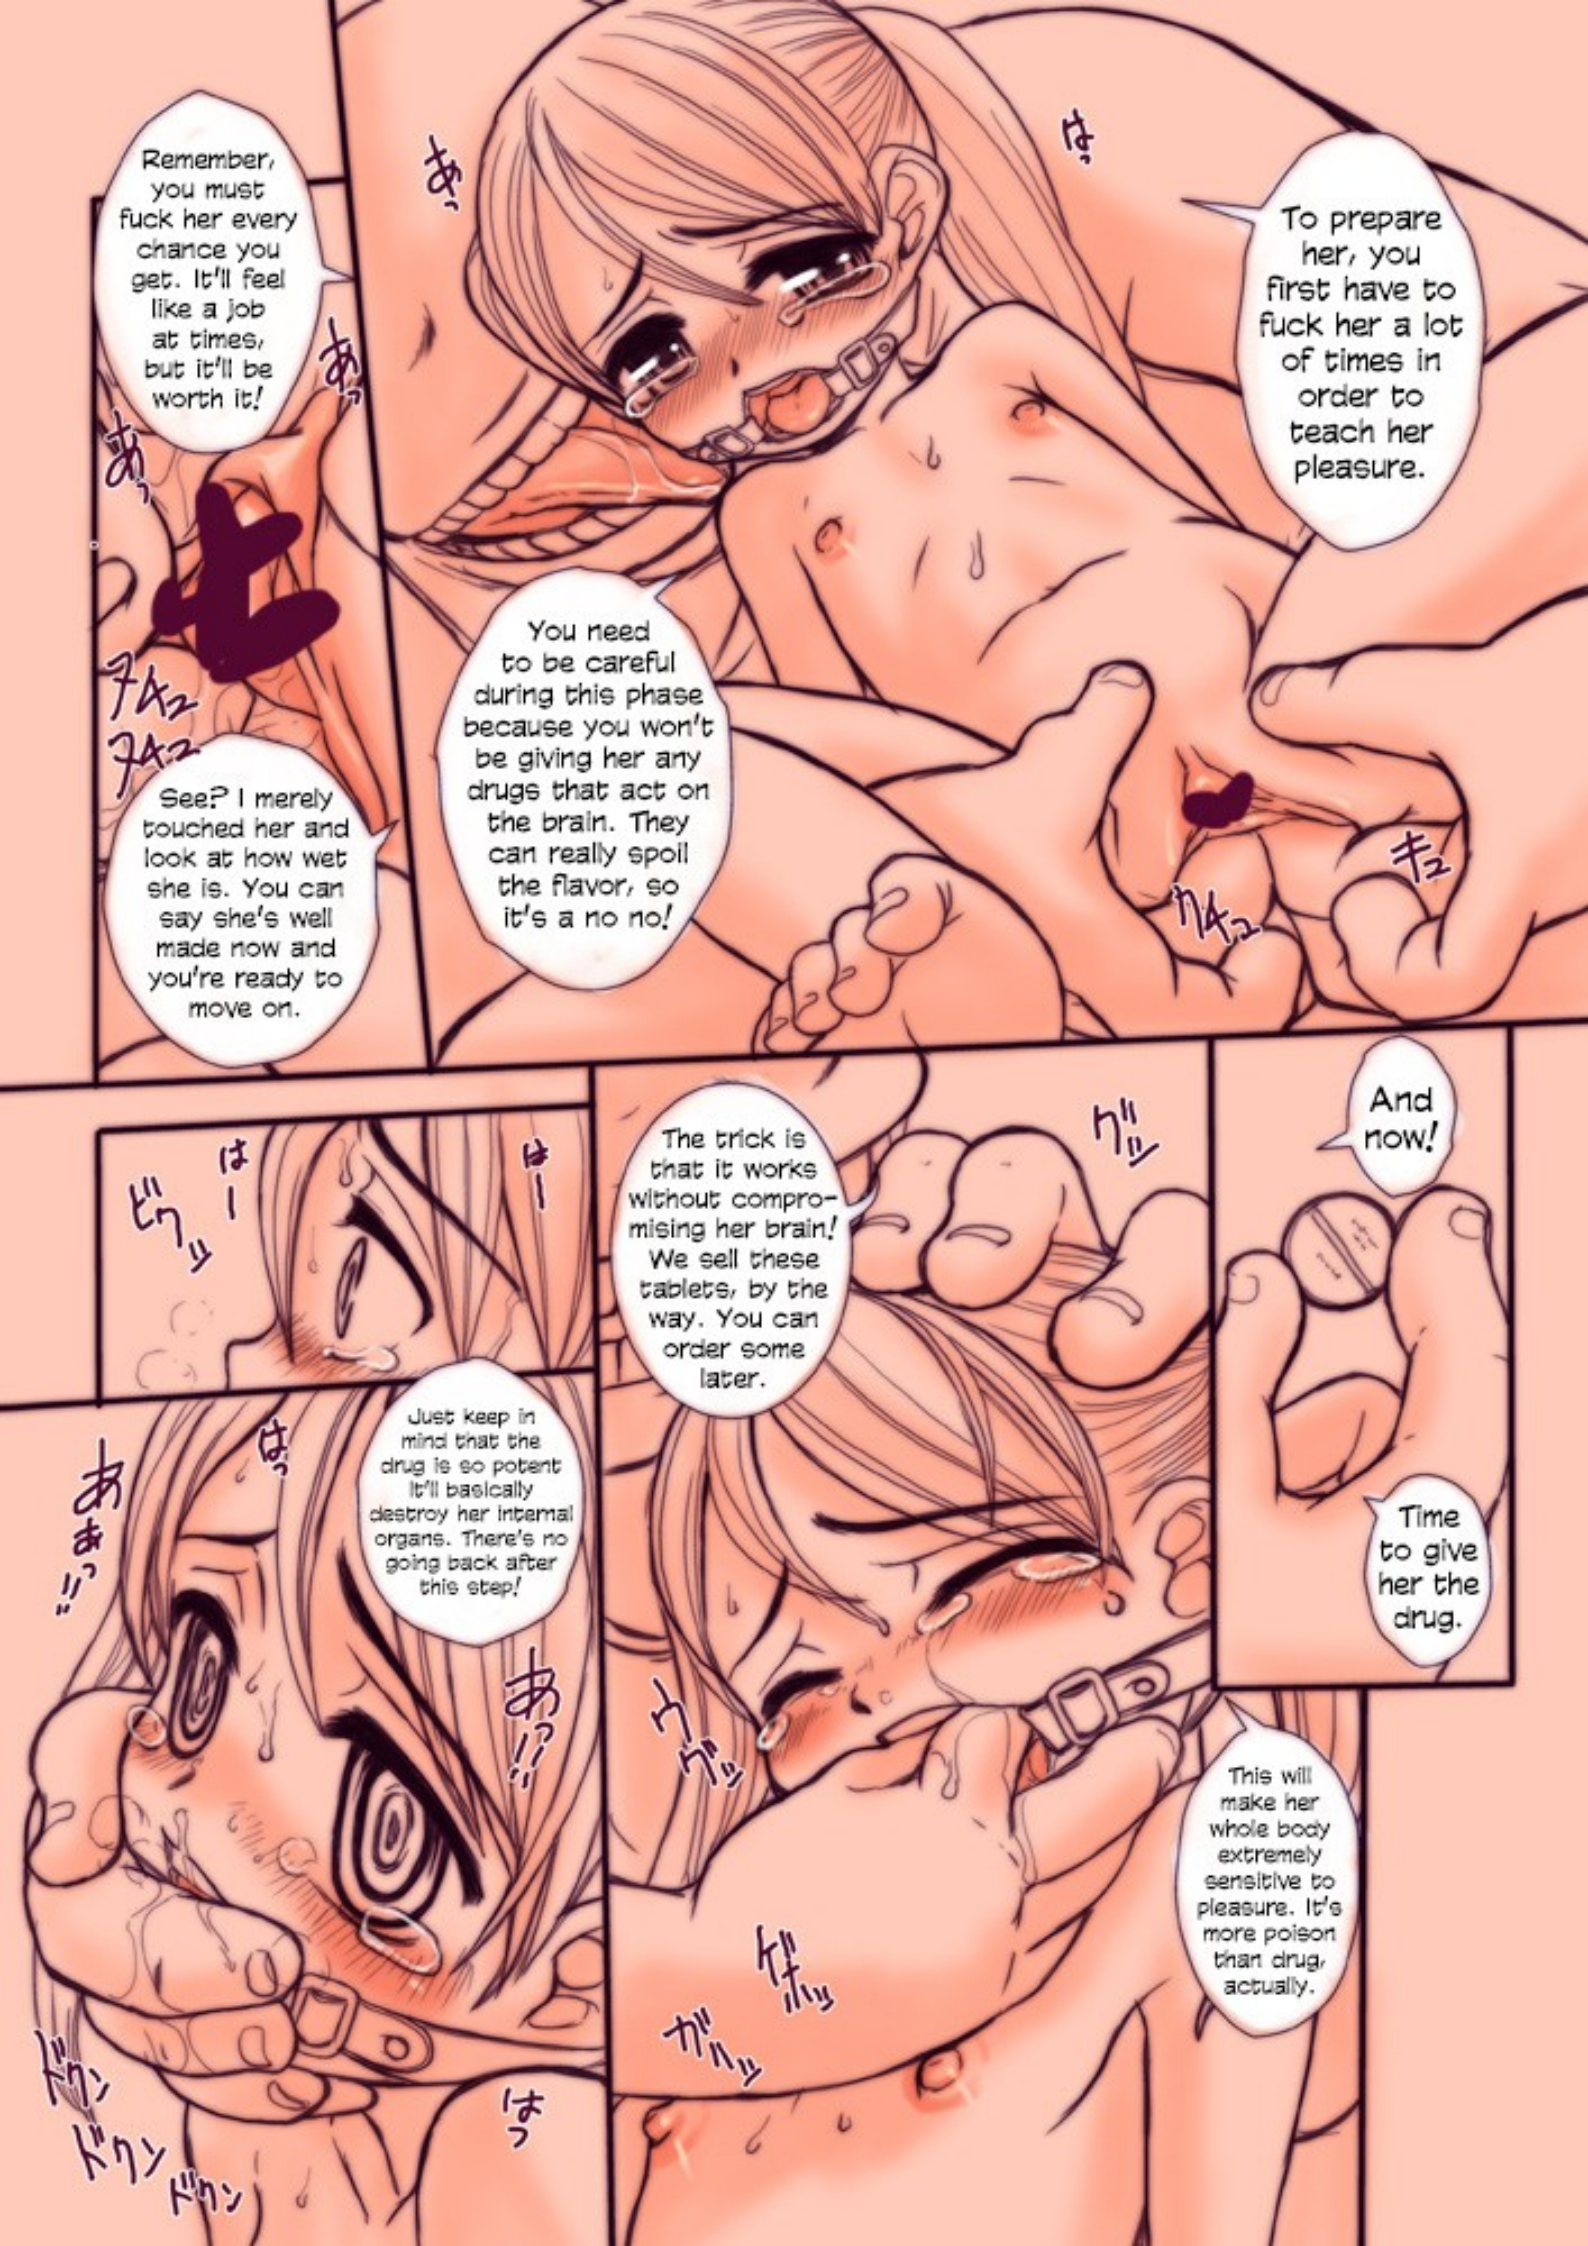

The trick is that it works without compromising her brain! We sell these tablets, by the way. You can order some later.

And now!

Just keep in mind that the drug is so potent it'll basically destroy her internal organs. There's no going back after this step!

Time to give her the drug.

This will make her whole body extremely sensitive to pleasure. It's more poison than drug, actually.

How do I know that?
Steve described it to me after I made him lick one, haha!

See how quickly it's kicking in?
She's experiencing a sensation close to having her own flesh boil right beneath her skin. I can feel her body covering in goose-bumps.

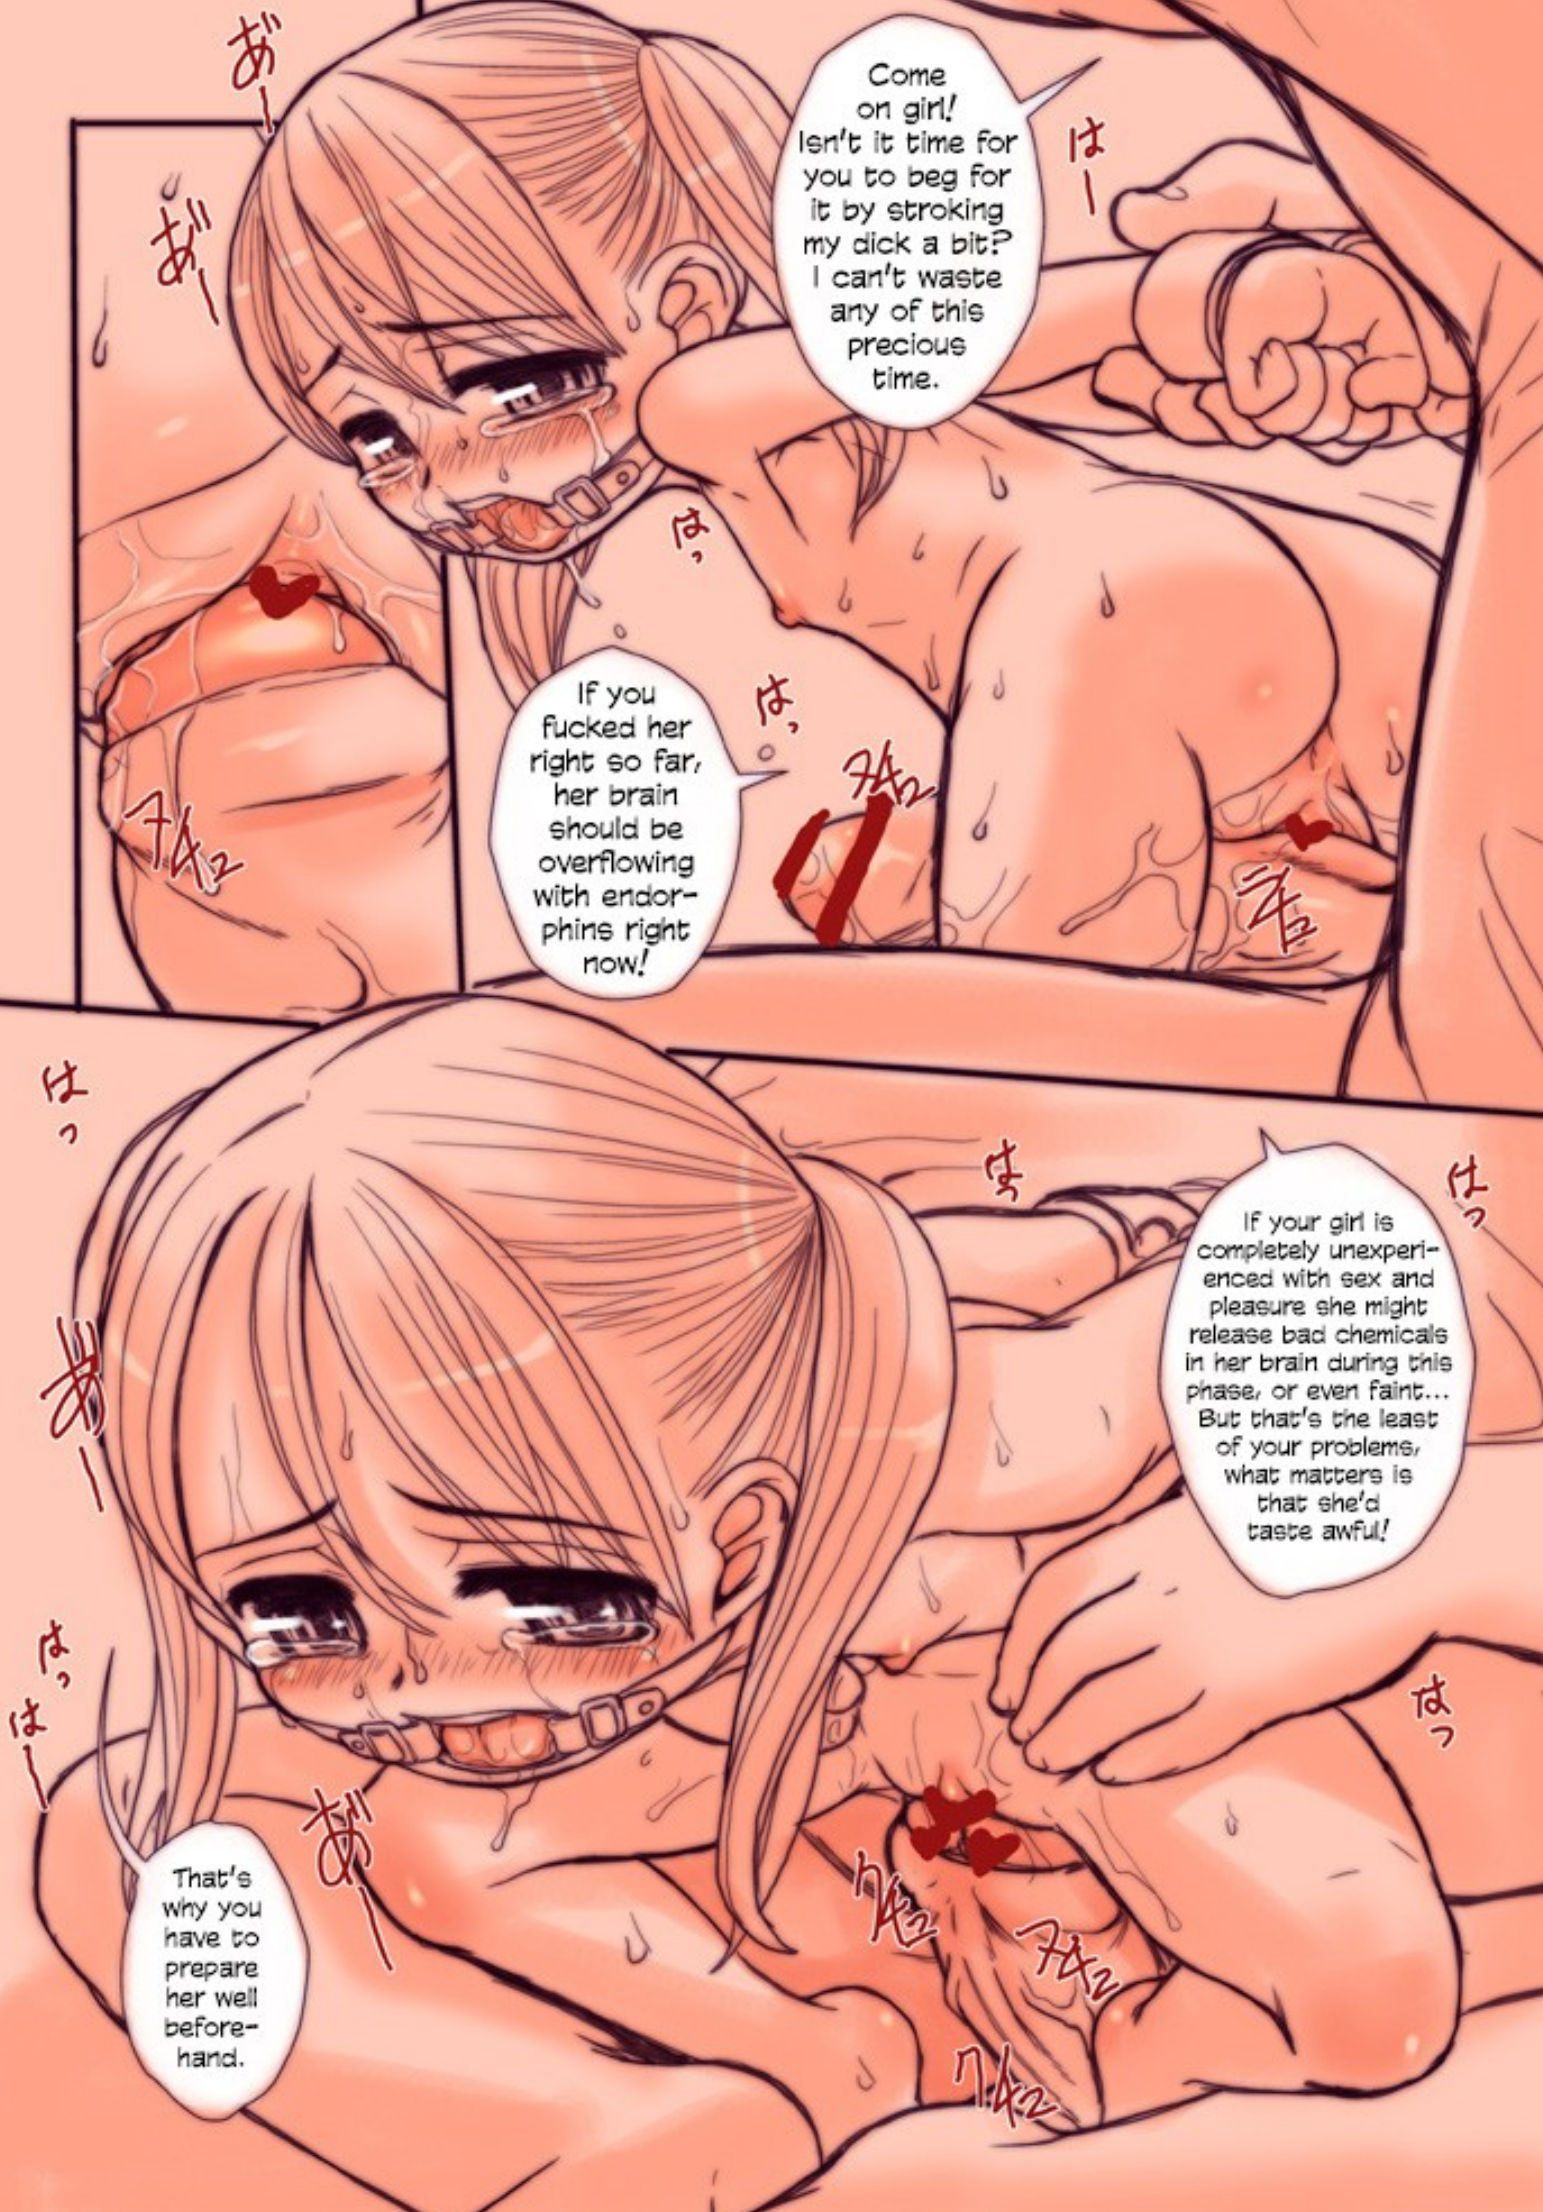

She'll start sweating copiously after a few seconds while the blood in her veins races fast and hard. You'll actually feel the veins pumping against your dick, resulting in a pleasure similar to that of vibrators. Man, I can't wait!
Uhihi!

Come on girl! Isn't it time for you to beg for it by stroking my dick a bit? I can't waste any of this precious time.

If you fucked her right so far, her brain should be overflowing with endorphins right now!

If your girl is completely unexperienced with sex and pleasure she might release bad chemicals in her brain during this phase, or even faint... But that's the least of your problems, what matters is that she'd taste awful!

That's why you have to prepare her well beforehand.

If you did as I told you, she'll love having sex by now and welcome it. If you're into S&M you can also get creative. You could for example train her to orgasm when you beat her up. Sky's the limit!

はっ

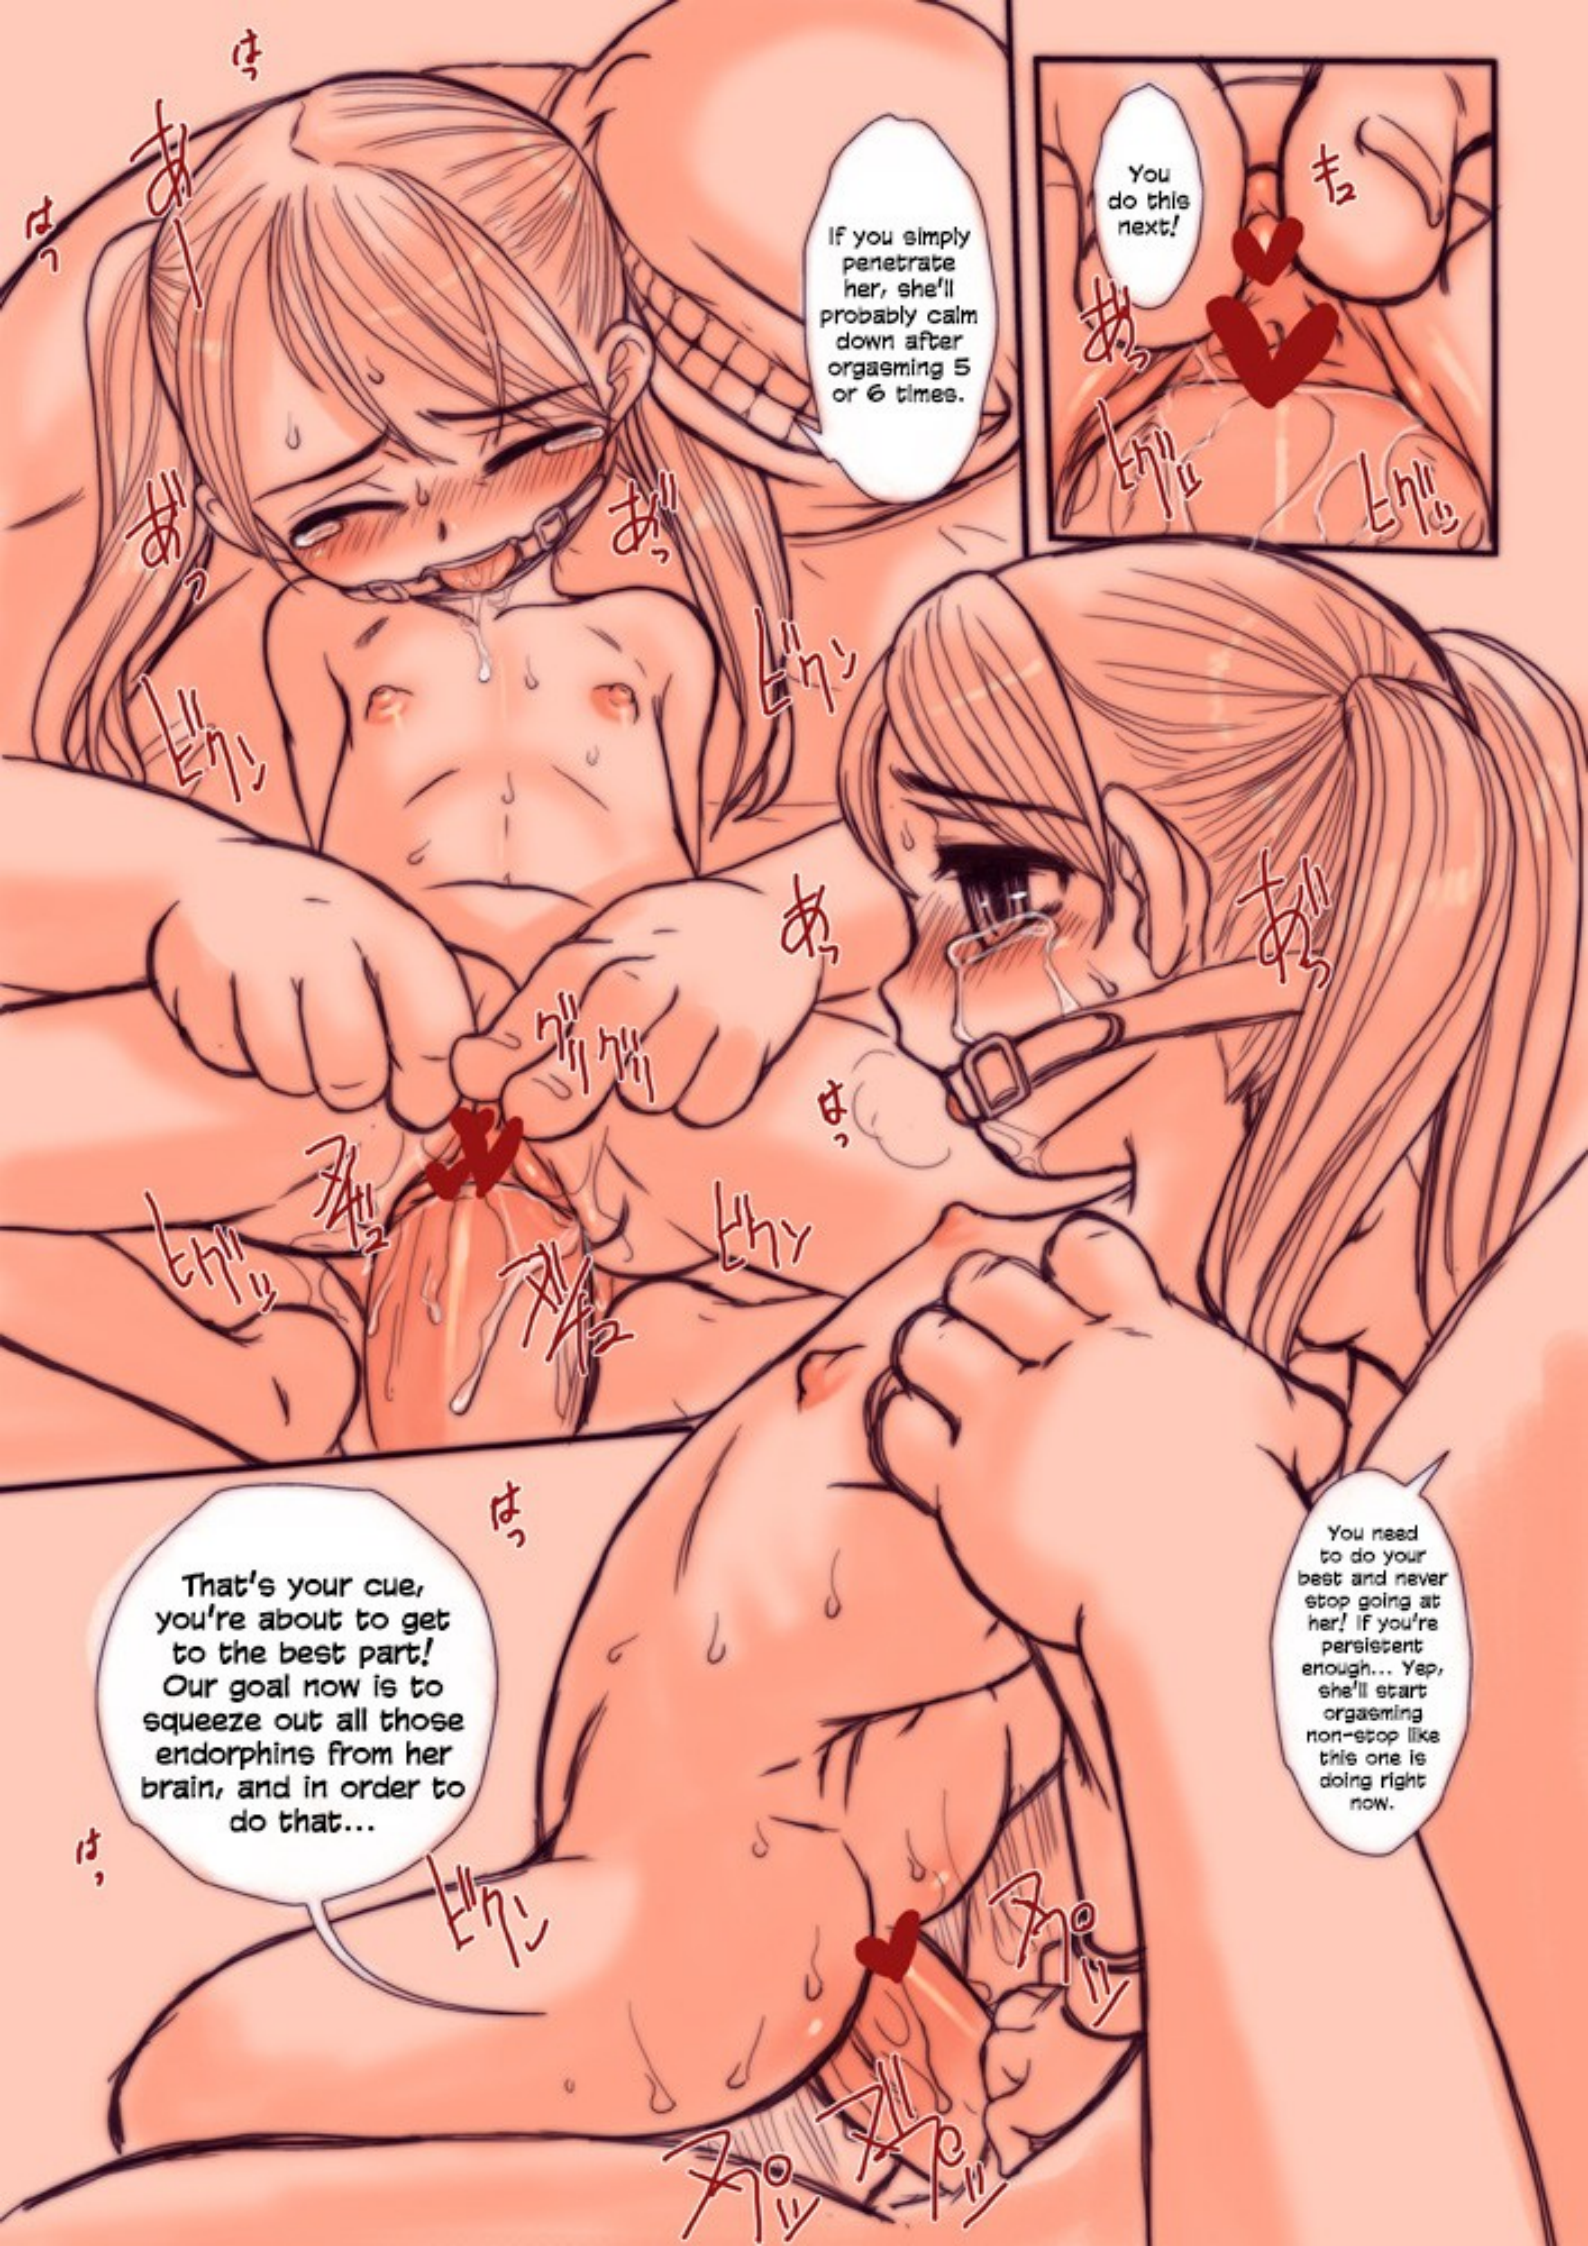

はっ

あー

As you drill her pussy, her brain fills up with natural opioids and gets reeeally tasty.

んっ

Her reactions will be much more violent than usual, and of course her pussy will feel incredibly warm because of the drug you gave her. It'll really feel like melting in there! But don't get sidetracked and never forget your final goal! Hehehe!

If you simply penetrate her, she'll probably calm down after orgasming 5 or 6 times.

You do this next!

That's your cue, you're about to get to the best part! Our goal now is to squeeze out all those endorphins from her brain, and in order to do that...

You need to do your best and never stop going at her! If you're persistent enough... Yep, she'll start orgasming non-stop like this one is doing right now.

はっ

はっ
はっ

You don't want to crush her skull so make sure you keep her head perfectly still. You don't have to worry about her thrashing around because the drug we gave her made her unable to feel pain. If you're still anxious you're free to tie her down, but I assure you, it's unnecessary!

This is a very delicate step so please look carefully! You can use a knife, a scalpel, or even do it like me and use your teeth...

Pay extra care not to crush her brain, either! Simply remove the scalp and the parietal bones in order to expose the grey matter.

はっ
はっ

When you're done, push your tongue through both the neocortex and the limbic system until you hit the hypothalamus and the pituitary gland.

You'll find the brain just below the dura mater, but be careful! The brain is as soft as tofu and gets squished easily.

Some skip this step and dig in right away, but doing so will result in a much less enjoyable experience.

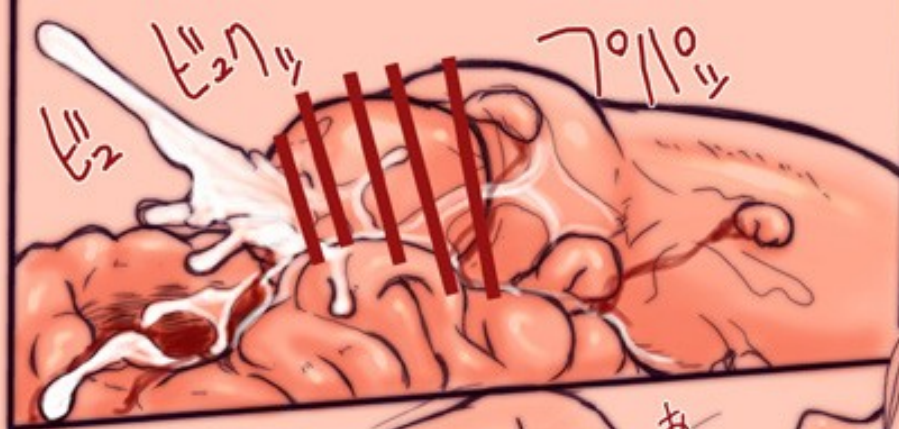

Now just enjoy yourself and have a great time!

I'm positive you'll understand when you reached it even if you've never tasted it before. It'll be like a strong prickling on your tongue as soon as you hit the spot...

There we go!
Did you enjoy the presentation? As you can see, I made her wear a ring gag so she'd be as noisy as possible. This is not a necessary step though, it's ok if you don't enjoy agony screams! On the other hand, handcuffs can make her easier to enjoy during the tasting phase, so remember that's an option as well.

Of course you can fuck the brain or eat her after you've finished with her. She's already doomed after all: her internal organs are shutting down because of the drug. It would also be cruel to let the poor thing die in agony by herself, so make sure to kill her as an act of mercy!

You can of course try this recipe without the drug! The only problem is that it takes a long time to train her and get a brain tasty enough to make it worth your while, so we strongly suggest using our product.

OK, see you next time!

Bye bye!

It's impossible to overdose on this, by the way. This is a safe and natural narcotic with no side effect even in high quantity. And they say there's no happy-go-lucky drug in the world!
