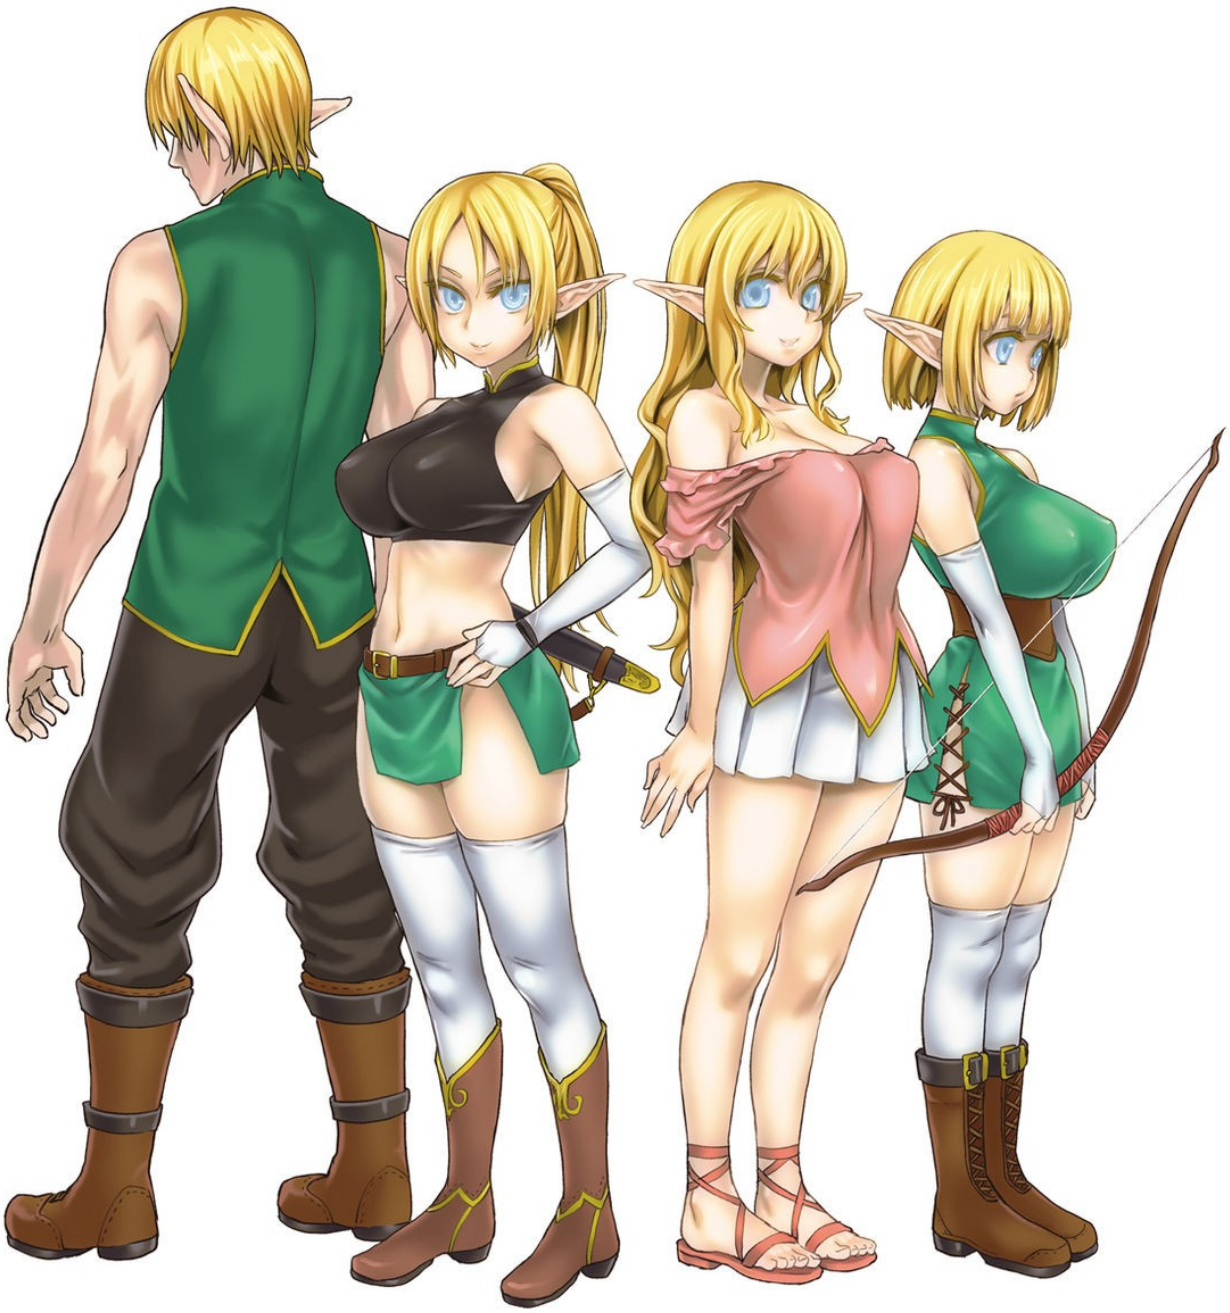
Elf

Blond haired and blue eyed, it's a species composed of beautiful males and females only.
In the Ancient times, their soul adored the earth
which is why they are beings incarnated on the ground.
They live 500 years to 1000 years
They become adult between their juvenile age and their twenties,
then don't age at all until their very late age.
In addition to not getting sick at all, their regeneration capacities are high.
Not eating meat, they only eat fruits and vegetables,
but even if they do not eat anything they do not lose weight.
They live peacefully surrounded by nature deep in the mountains
inbetween the mountains chains of the western continent.
Their sexual desire is quite weak,
as they only give birth to 1 or 2 children during their entire life.
A long time ago, they throughly went through the prosperity
of their great culture and the unification of their state
but from the lack of mating their number naturally dropped continuously,
now they only have cities and villages here and there on the continent,
which are composed of only hundred to thousand of people.



Enty Only. Thanks your support.

Gaki"餓鬼"

Cannibal demons, came from the eastern continent
also called ogre on the western continent.
They were once a species which soul was close to the elves',
but as they consumed one of their sibling, the gods abandoned them, thus getting cursed.
Thus, their life which was around 500 years accumulated curses and shrinked to mere 10 and so years.
The curses forced them to eat only meat and drink blood,
as water couldn't quench their thirst anymore.
But even then, they are eternally starving, unable to satisfy their needs.
As they are ageing and renewing their bodies quickly,
their stamina and recovery capacities are tremendous
so much that even if you cut their legs and arms, those would immediately respawn.
They are able to inseminate all mammal's female,
the child that will ensue is only one of an orc though.
Their main meal is only the meat of the other species.
They have pigs as domestic animals and eat them only when necessary.
They have already consumed all the species on the eastern continent,
which is why they are crossing the ocean to go to the western continent.

The orcs, they're ...!!
Don't let any female escape and bring'em here
kill all the males and feed them to the pigs!
Each one of those females have some fat, they look tasty.
With this we won't be out of food nor fuckholes for a while.
Hehe, what a pretty bunch

To fulfill the orcs' hunger for a time,
The elves that lived for centuries are tormented, raped, slaughtered and then eaten.
The lives and the history of those girls are consumed in a blink by those predators, as if they were meat.
For those elves whom spent thousand and thousand of years living a boring life,
without pleasure nor changes,
the encounter with the orcs whom stole both their peace and life probably gave them somewhat of an excitement.
When they had their species' men eradicated and had the sperm of the orcs flooding their womb the girls, while crying dispirited tears,
sketched the greastest smile in their whole life.

Without even leaving the bones, the male elves disappeared into the pigs' stomach.
As if the hatred of those males transferred through,
the pigs endlessly raped the elves.
The excrements the orcs and the pigs (whom consumed the male elves)
is the only meal for those girls who became livestocks.
The hopeless females, the females whom feel pleasure through violence,
the sex-crazy females, the females adored by the orcs.
The noble species named "elf" as it is disappear,
they are only considered the pigs' meatwives,
inferior meat livestocks who waits for their execution.
The females, whom coveted the fallen figure of their tribe becoming food
(the form they will become the next day)
are engulfing fat for their masters whom will soon eat them.
On the 2000 plus elves, only 29 are remaining...
The weak females become livestocks,
the strong males dominating the world.
When this race is finished, which race's female will they consume next?
