This creature is similar to the earth cow.

A mollusk similar to Earth's cephalopods Their ecology is very interesting ...

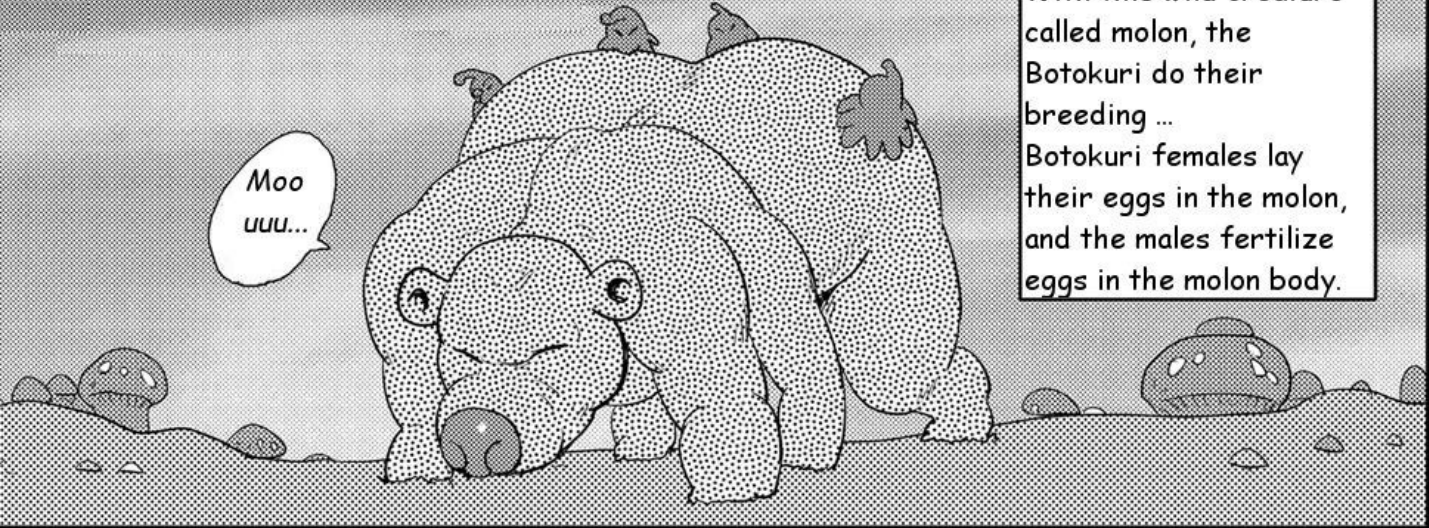

On the second spiral of the galaxy, the Botokuri live on the third planet orbiting their namesake star.

# Animals Across The Universe

Moo uuu...

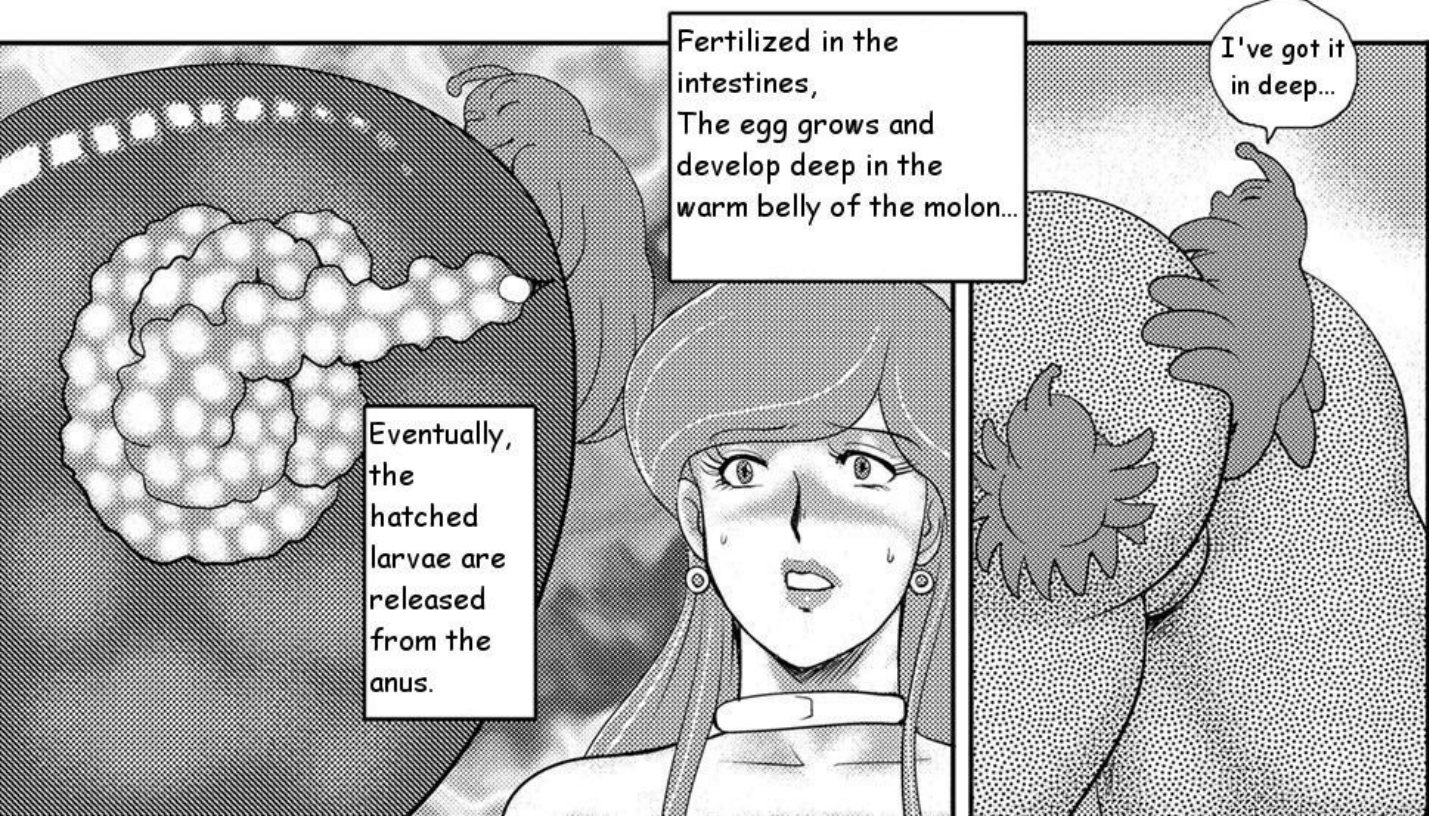

With this wild creature called molon, the Botokuri do their breeding ... Botokuri females lay their eggs in the molon, and the males fertilize eggs in the molon body.

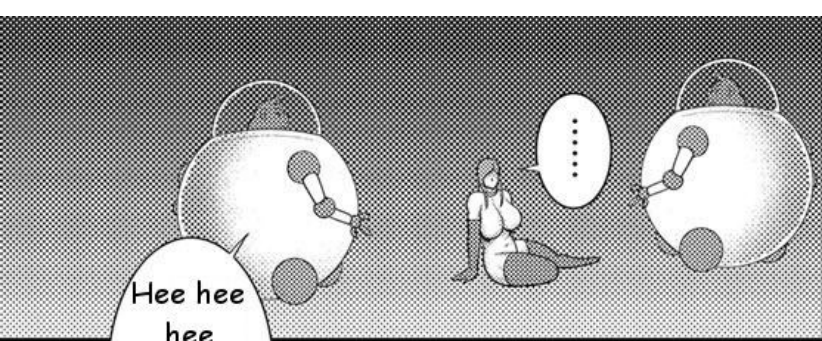

Fertilized in the intestines, The egg grows and develop deep in the warm belly of the molon...

I've got it in deep...

Eventually, the hatched larvae are released from the anus.

part.
