SEX EDUCATION

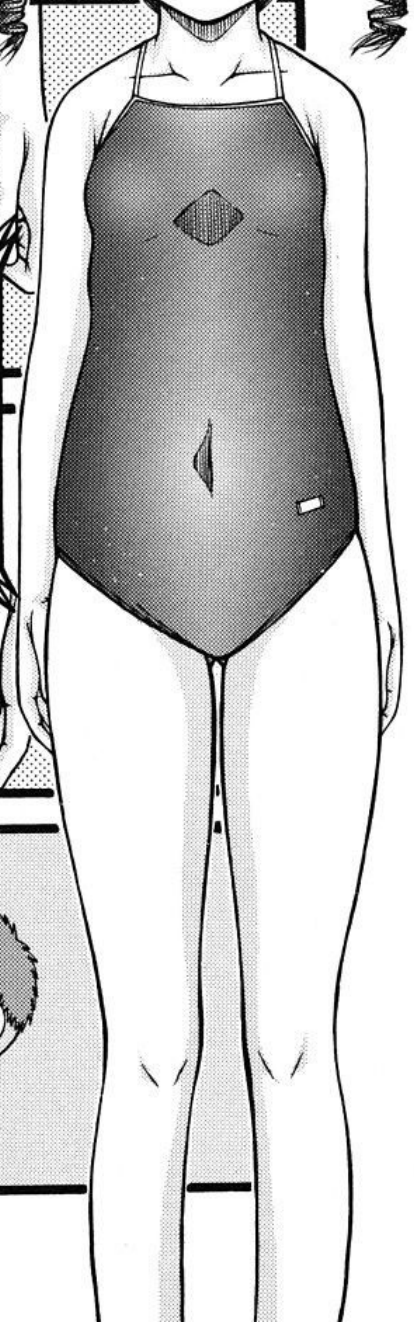

The same
is true
for
humanity

GENDER

Most of the
life on this
planet falls
into either
male or
female

Man
and
woman

The two
sexes work
together
to create
new life

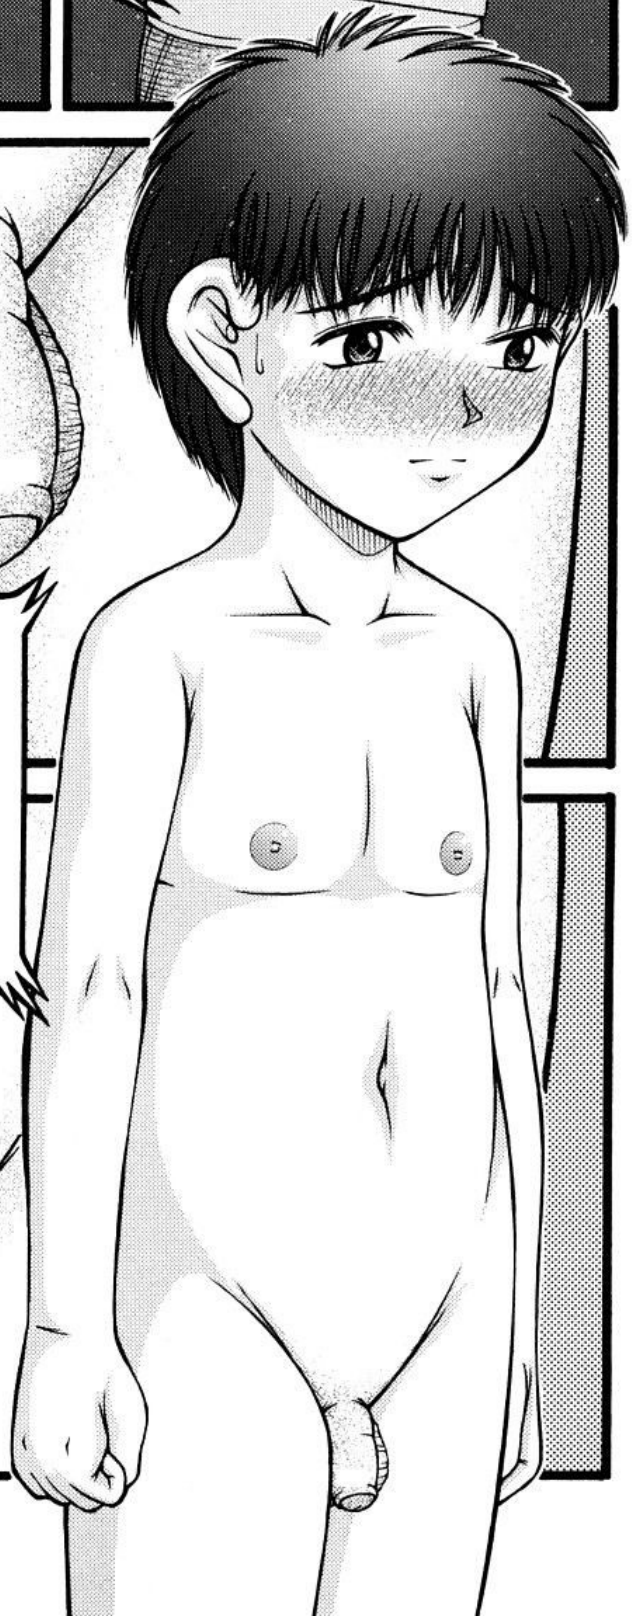

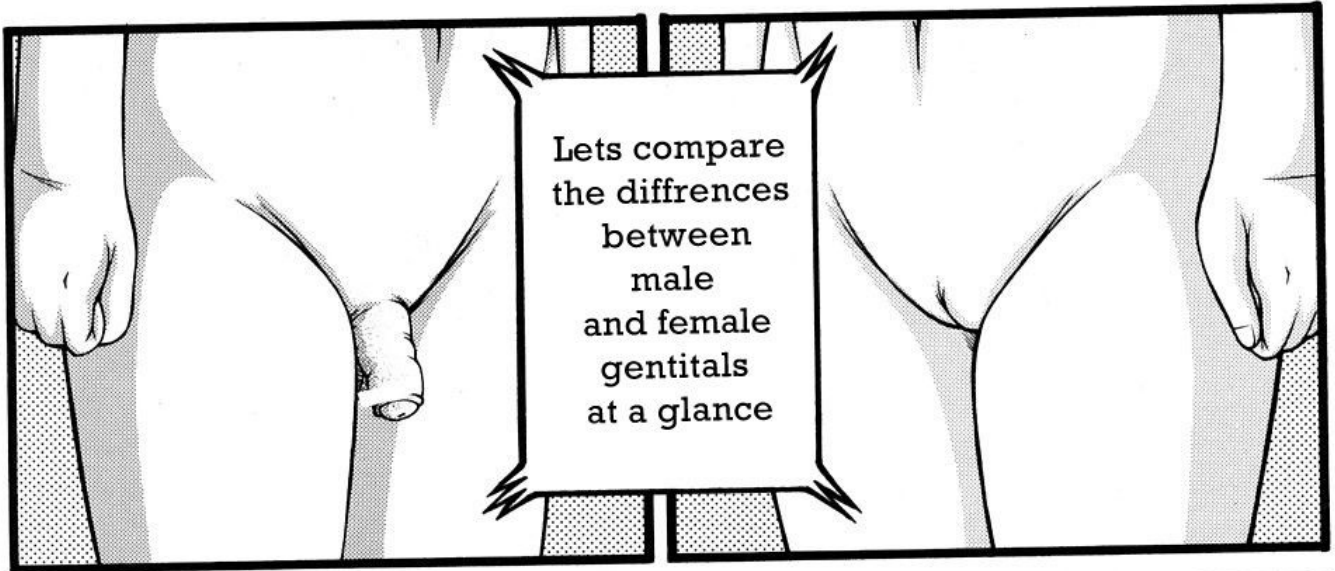

Just as
plants
have a
stamen
and
pistil

Take off

There exist
male and
female
genitalia,
each with
a different
role

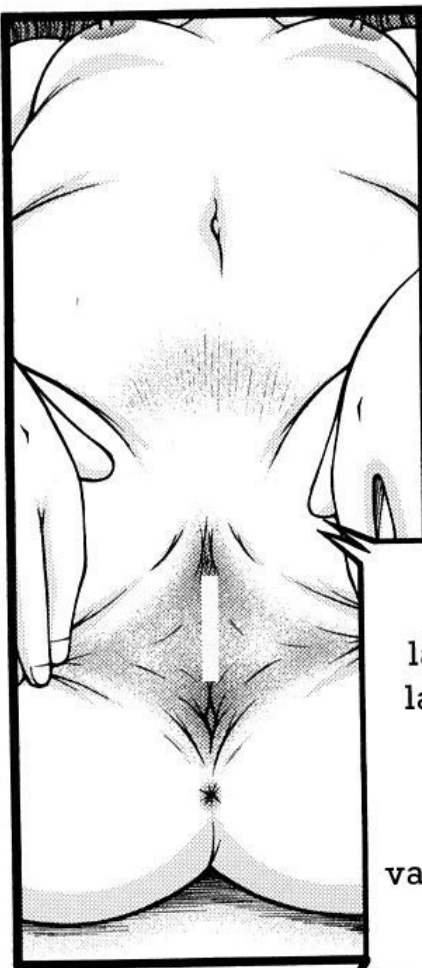

Lets compare
the diffrences
between
male
and female
genitals
at a glance

First is
the female
genitalia

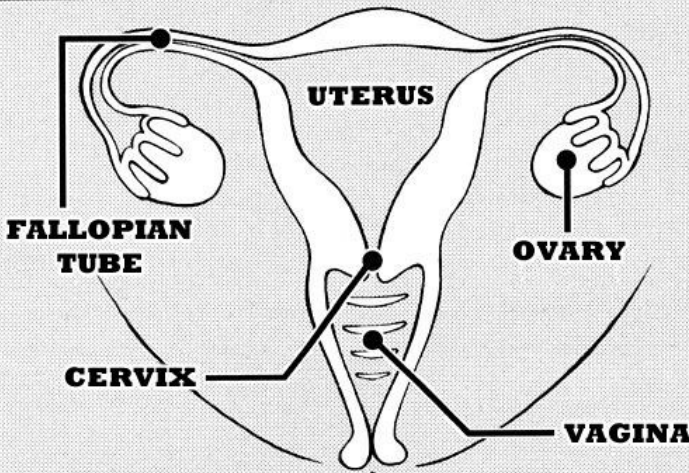

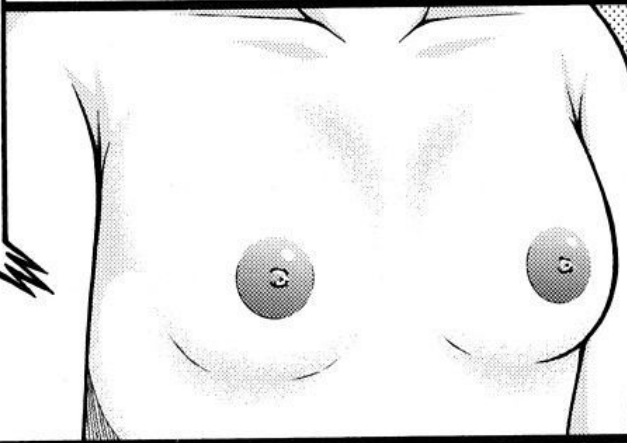

Note the
labia minora,
labia majora,
clitoris,
urethra,
and the
vaginal opening

SECONDARY DEVELOPMENT (FEMALE)

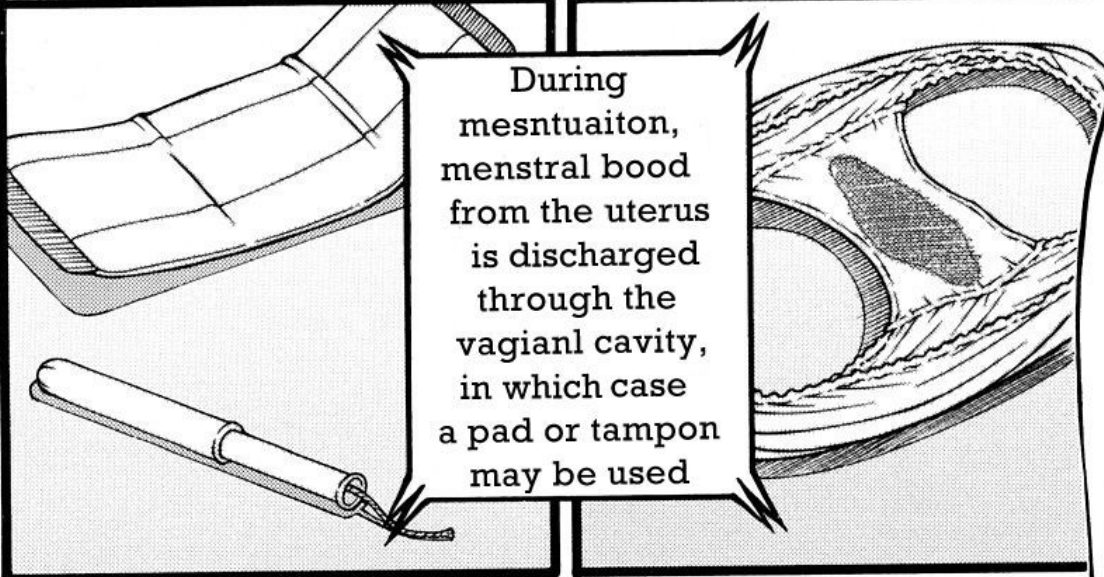

Secondary development

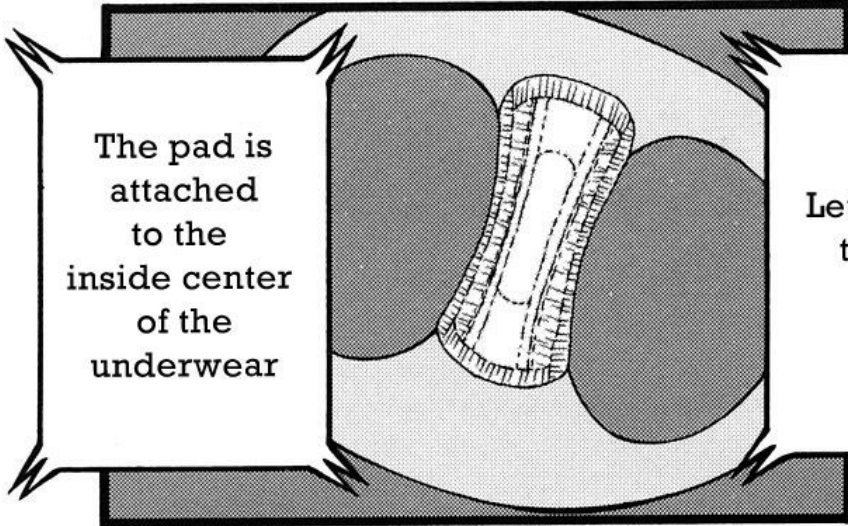

As women begin to mature, their breasts and pelvis develop

Menstruation begins as the genitals develop and prepare to have children

During menstruation, menstrual blood from the uterus is discharged through the vaginal cavity, in which case a pad or tampon may be used

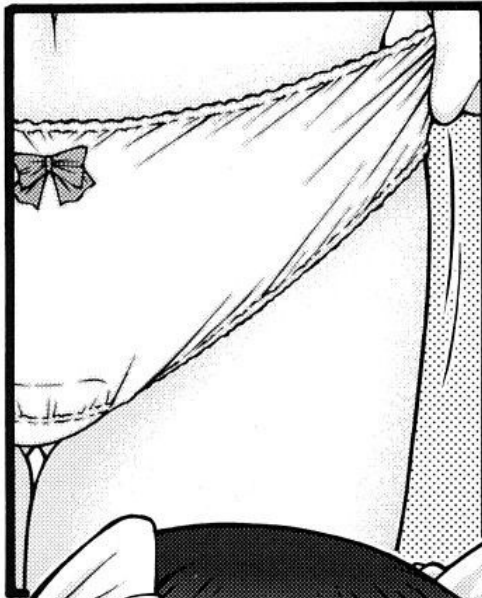

The pad is attached to the inside center of the underwear

Let's see how to put on a pad

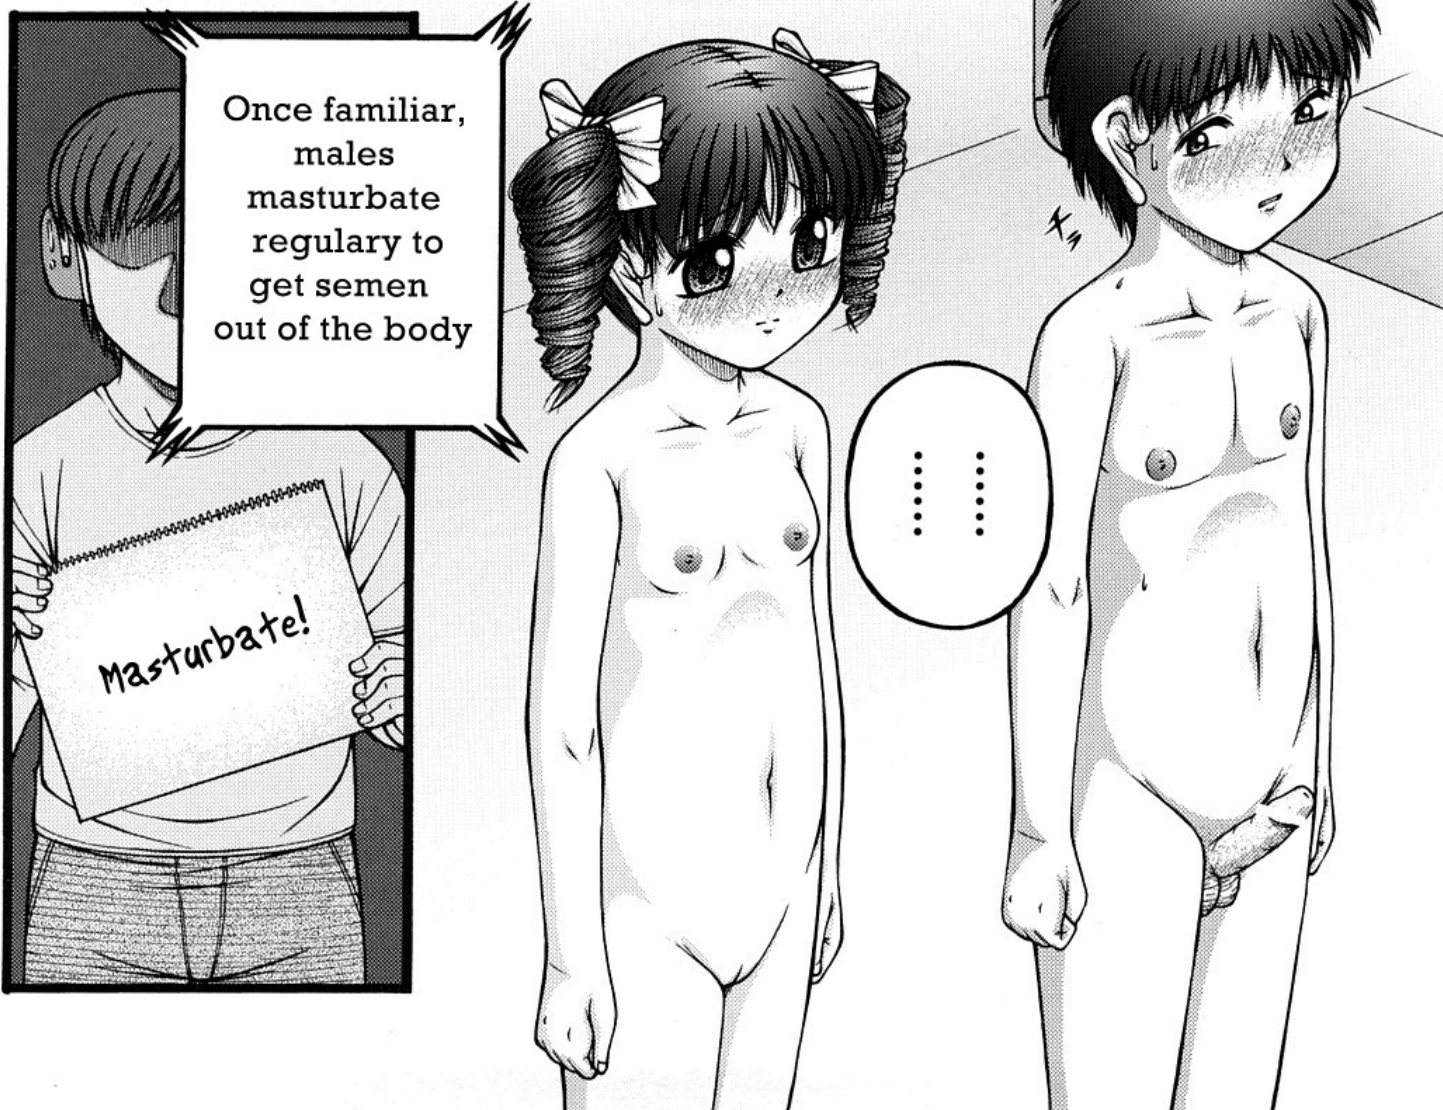

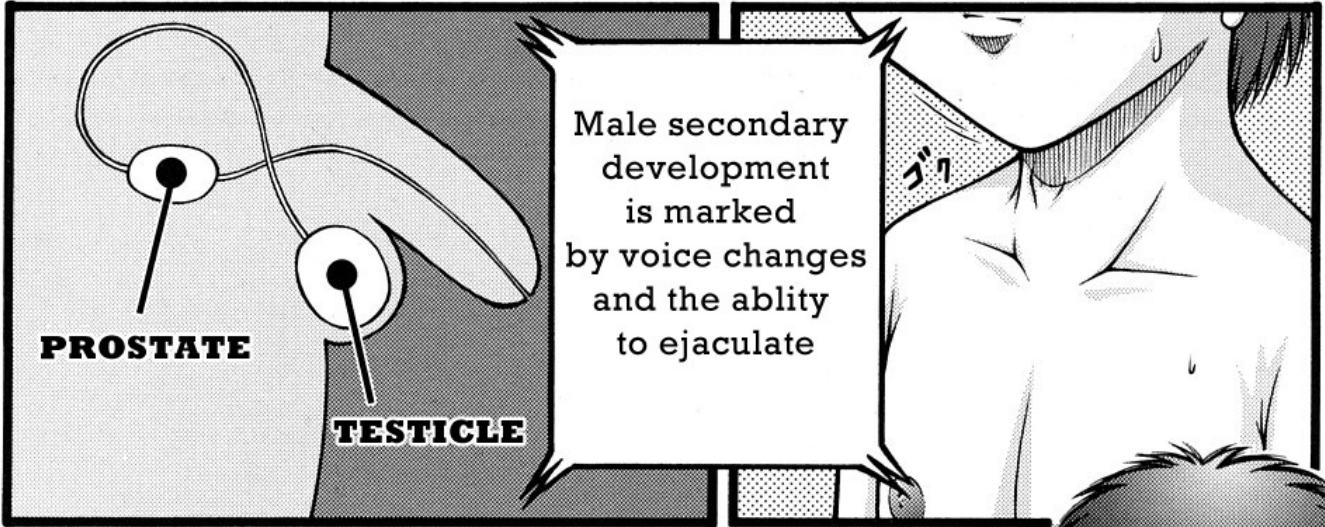

There are many types of pads, so try and use one that suits you

The use of sanitary products may be uncomfortable at first, and may take some time to get used to

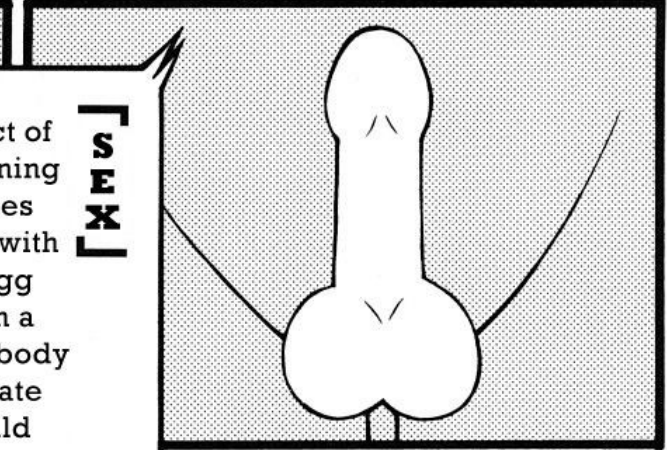

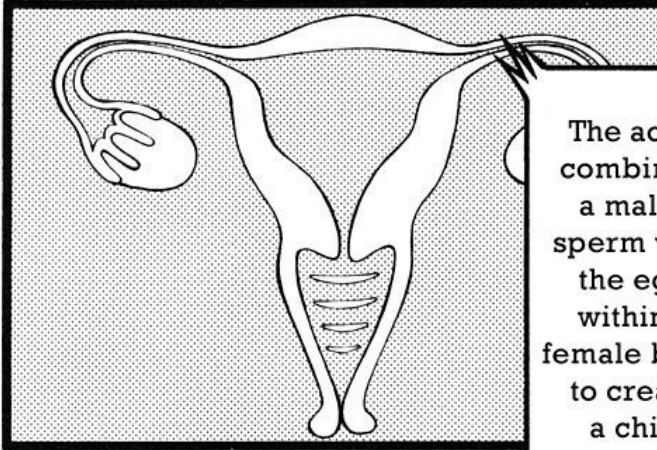

SECONDARY DEVELOPMENT

(MALE)

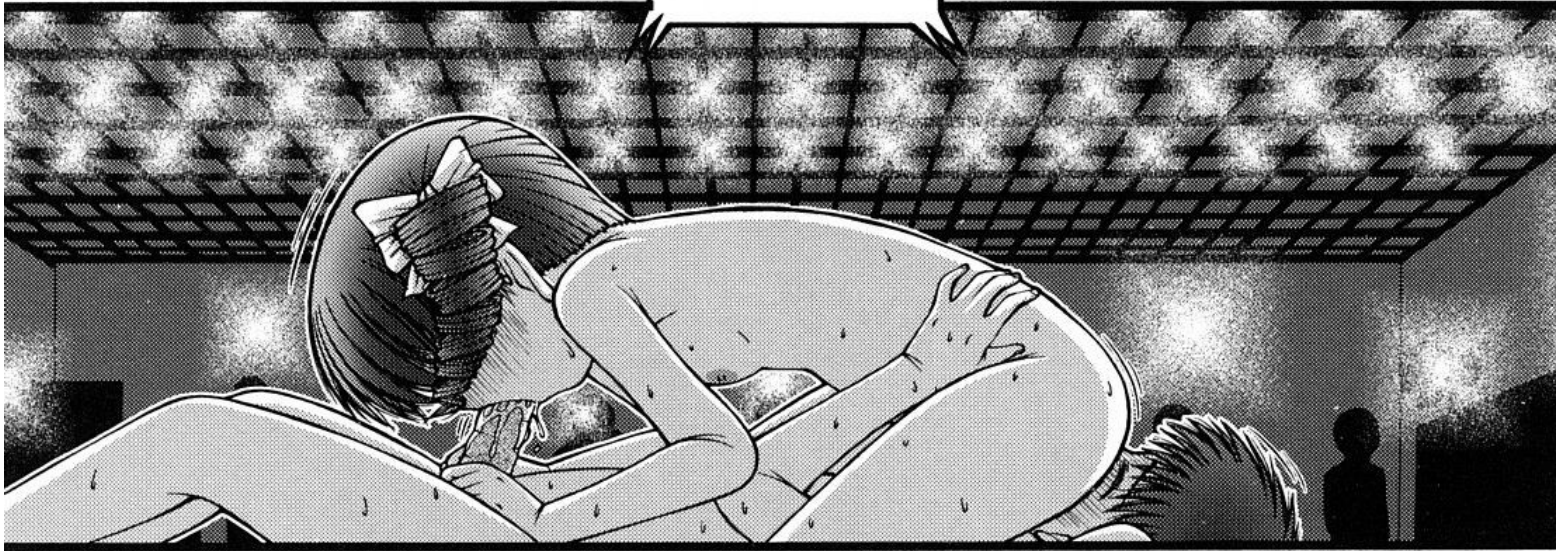

SEX

(SEXUAL INTERCOURSE)

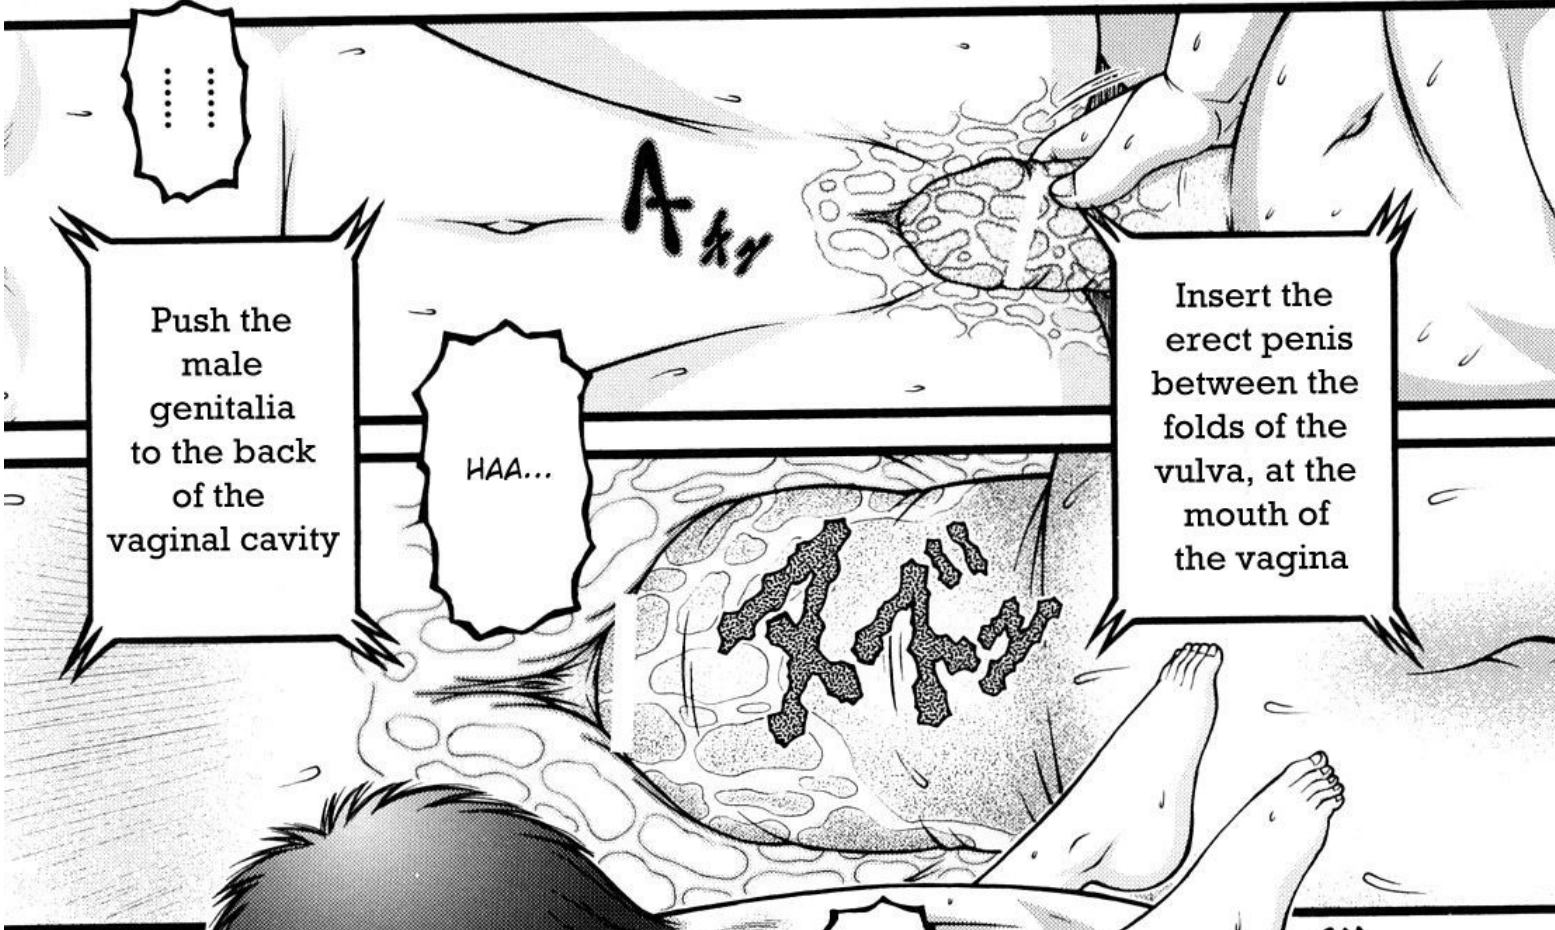

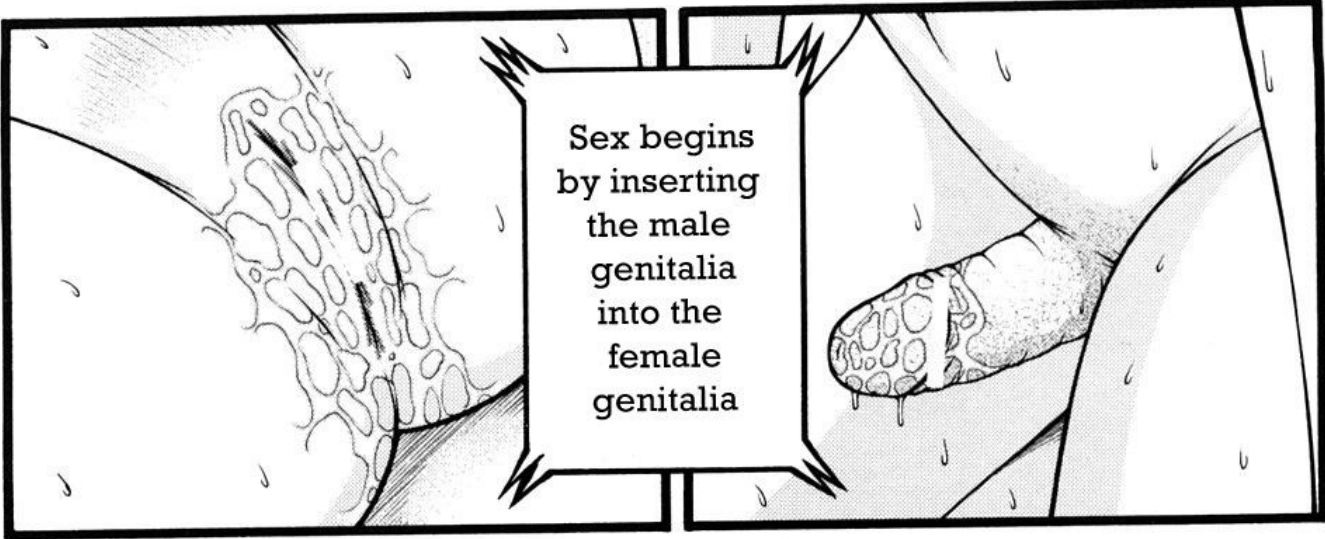

The act of combining a males sperm with the egg within a female body to create a child

SEX

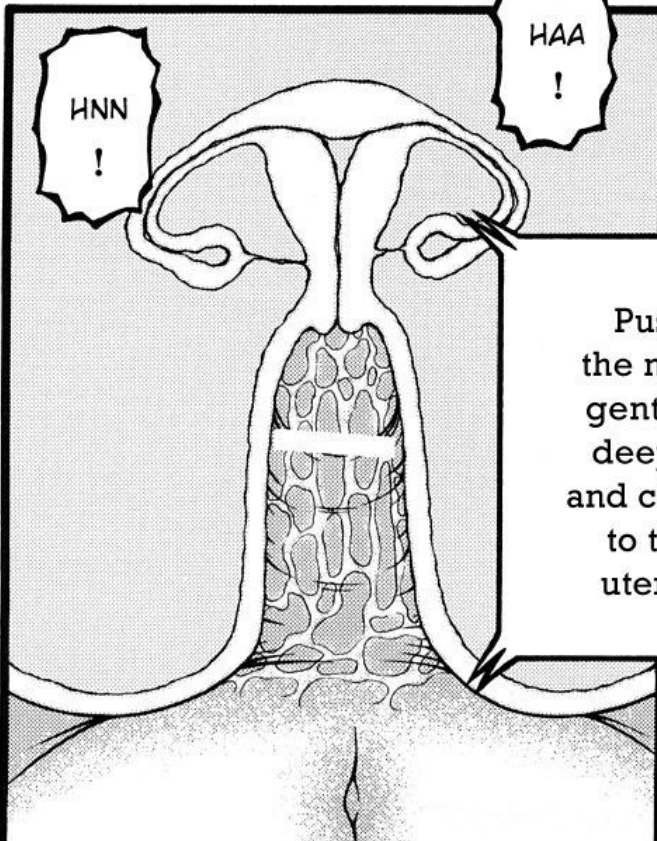

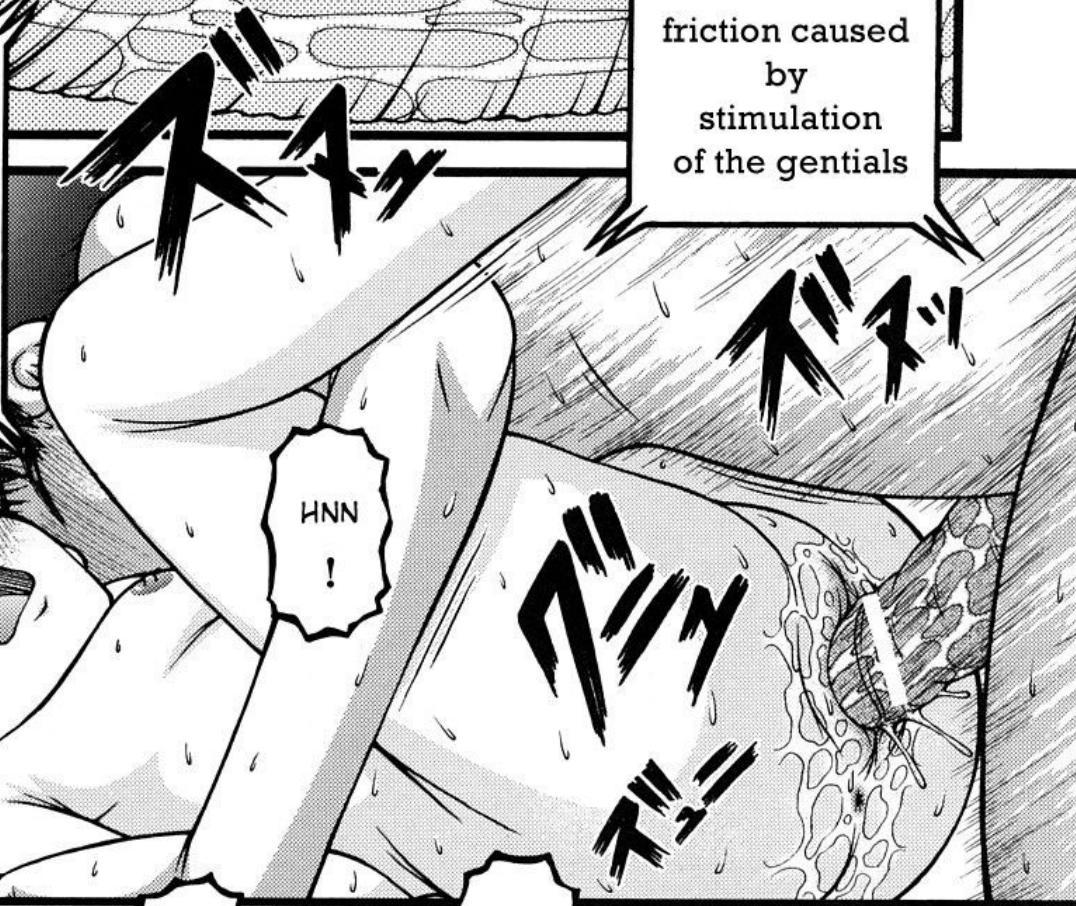

A pleasurable act of communication between lovers

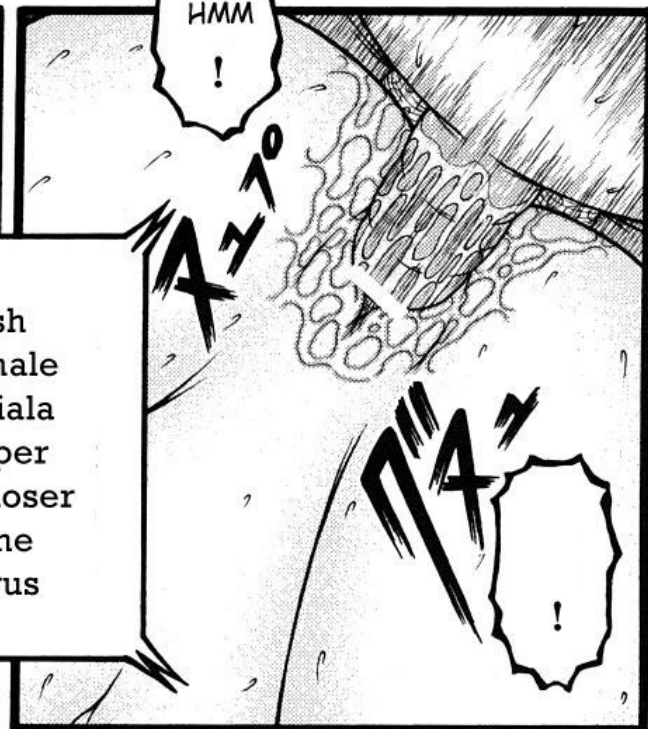

Mucus is secreted from the vaginal cavity due to friction caused by stimulation of the genitals

To feel pleasure, vigorously piston the male organ

HNN!

Push the male genitala deeper and closer to the uterus

HNNN

!

When a man
orgasms,
semen is
ejaculated
into a
womans
vagina.

When the
sperm
reaches the
egg,
a new life
may be
fomred

Ejaculated into
the vaginal
cavity,
sperm
makes
its way
into the uterus

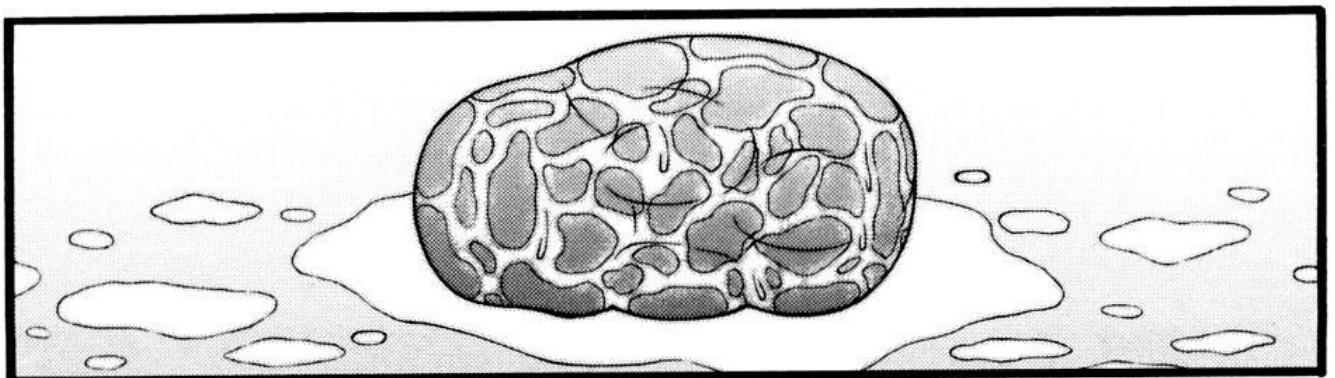

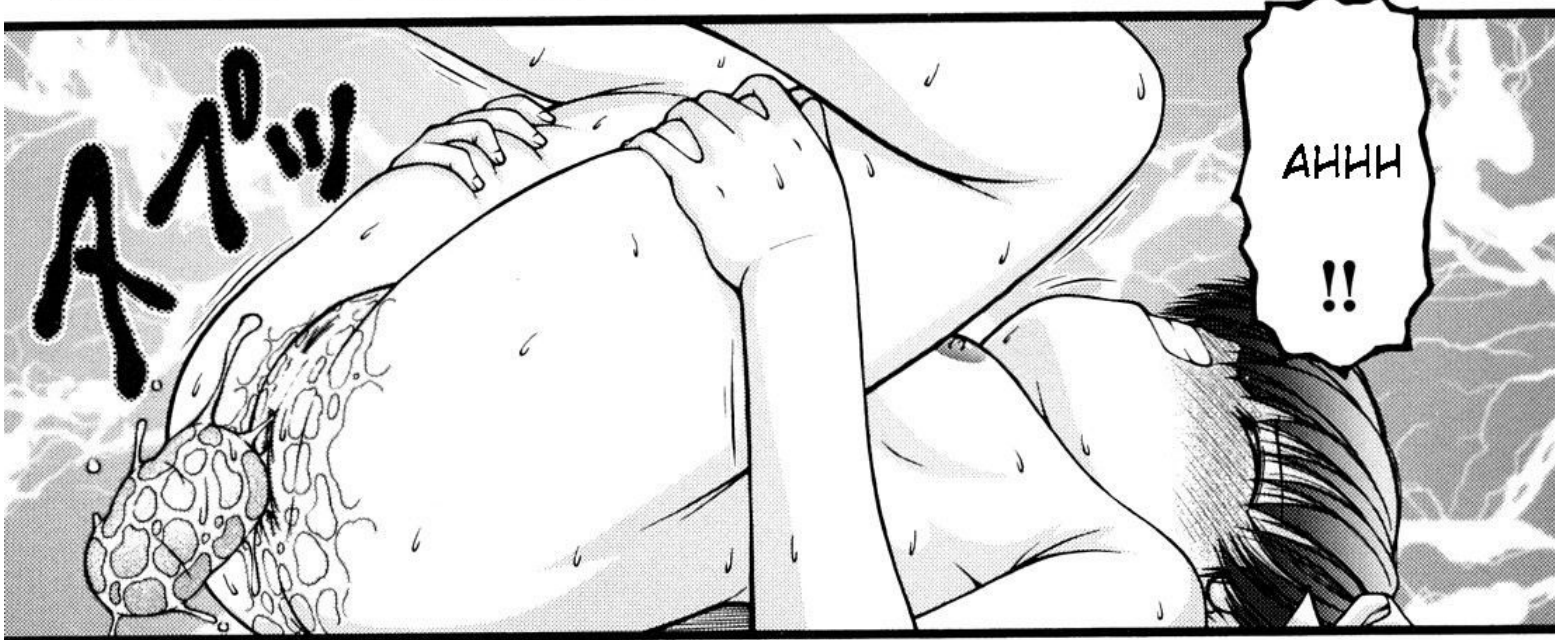

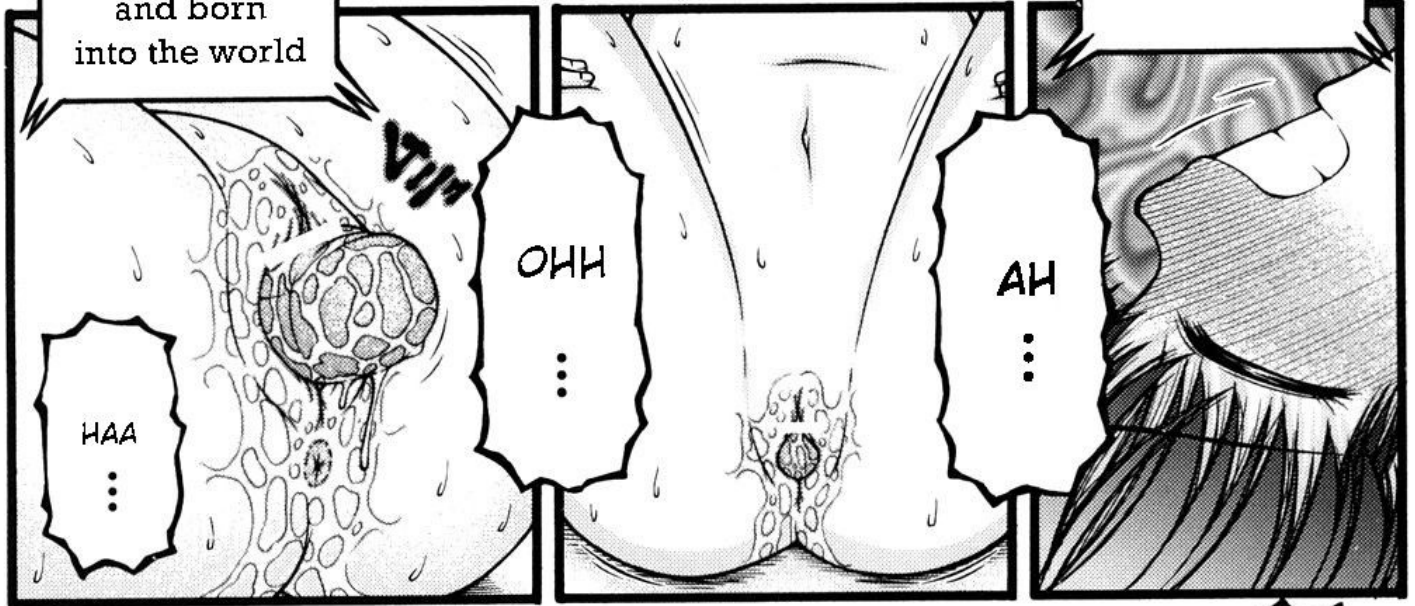

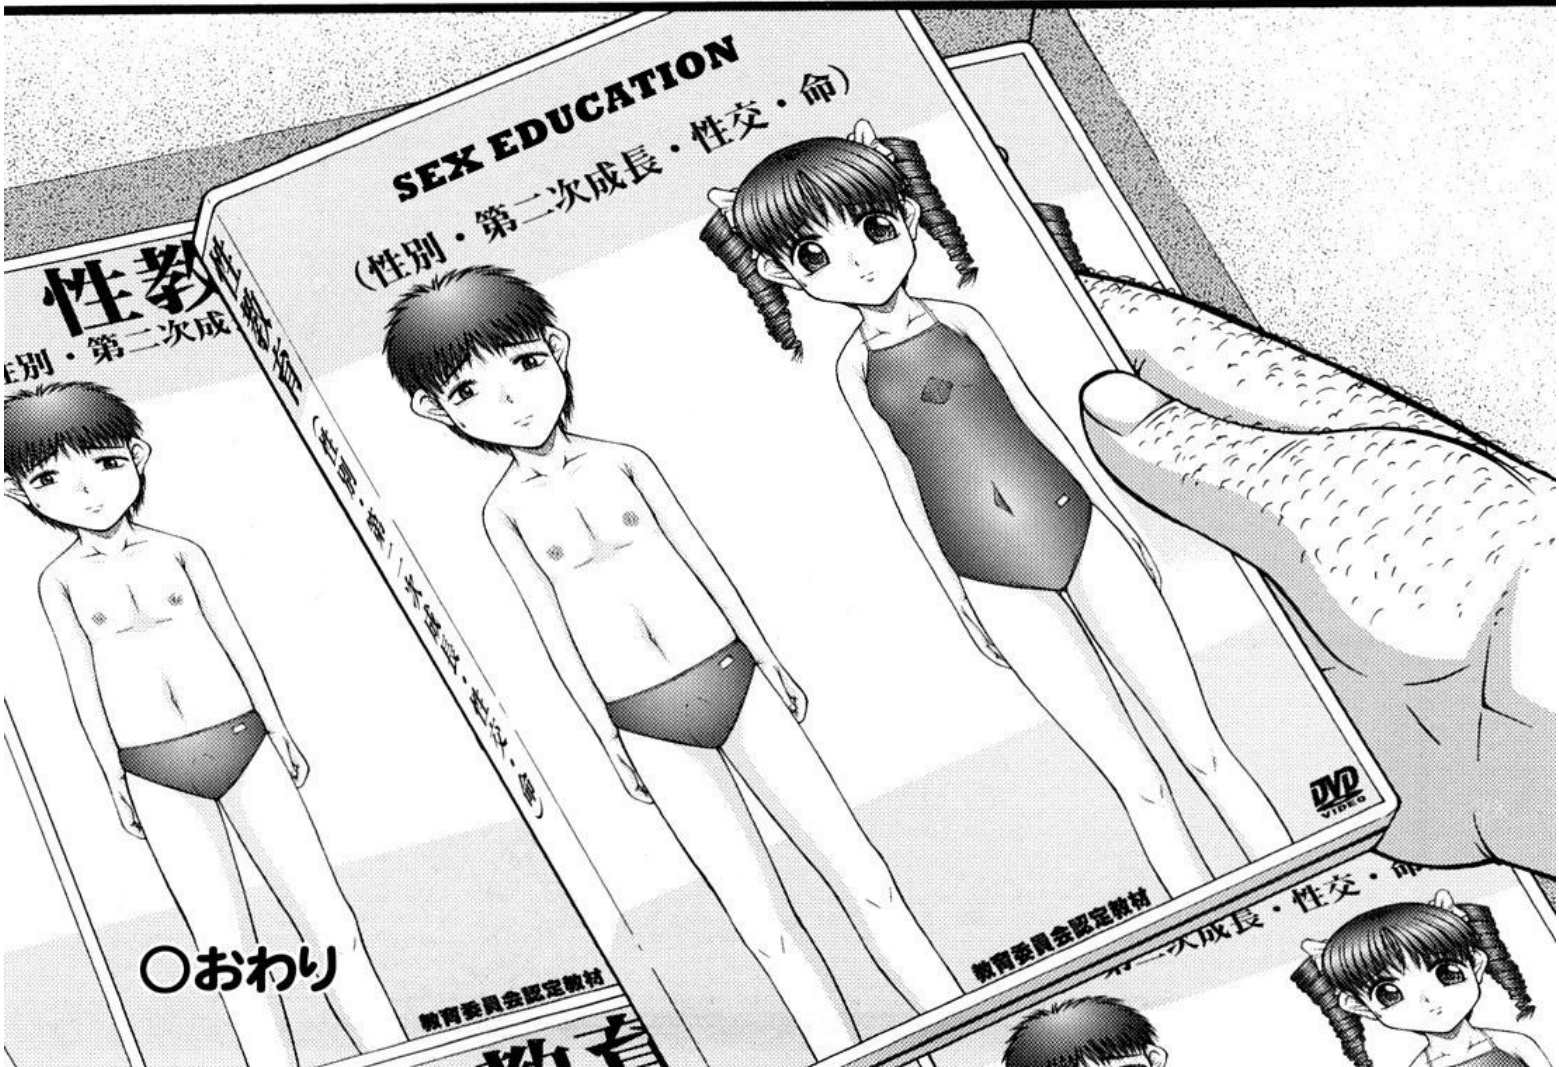

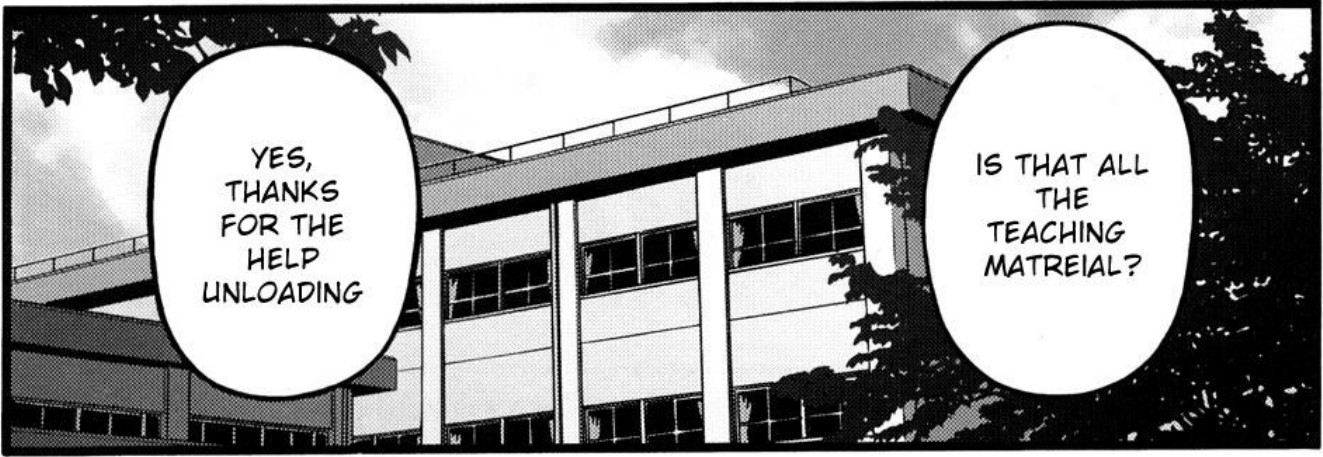

LIFE

After a period of about 9 months, new life is formed in the womb and born into the world

And so the egg fertilized within the female body
