

Tentacles Life

R-18
Adult Only

Guy who (probably) came to save her.

Kyah

In this world, tentacles feed on the bodily fluids of human females and commit interspecies rape, using their wombs as seedbeds to leave their offspring. This subspecies rape women in order to leave their offspring. Though they can only do this by luring in those that pass by their habitat, or when used as tools by people with good or bad intentions toward women. This method proved to be highly inefficient. One young tentacle was struck with an idea, remembering the old human adage:

"If you can't beat them, join them."

One woman, a somewhat peculiar biologist who studied them, leant an ear to that tentacle. She studied it simply out of curiosity and eventually, she and the tentacle came to an understanding, leading to her allowing it to use her body as a seedbed.

The inside of the human body is the most suitable environment for the survival of tentacles. In order to ensure a continuous supply of bodily fluid and hormones for their nourishment, tentacles are able to be highly efficient in their actions, expending extremely low amounts of energy. Initial entry of a host takes time, with the tentacle shrinking its body to conform to the host, and coming to rest inside the womb. Once it has acclimated to its environment, it can shrink to just a few centimeters in size.

Wow,
I didn't
expect it
to be so
easy...

Once it familiarizes itself with the host, it's able to connect to the nervous system and can act on the thoughts of the host. If the host wishes it, the tentacle and host can share sensations. They have a great influence on the body this way. When moving inside or outside the host's body, it protects the host with a special fluid, and can regulate pain through its connection to the nervous system.

When the host starts to nod off,
the tentacle carries her to bed in order to
maintain her health.

Over the following years, perhaps due to
the fruits of her research, the amount of
women and tentacles coexisting increased.

The tentacle helps the host with her daily activities to preserve her health. It may take some time to learn depending on what the task entails.

Washing the dishes

Looking for something to do

GRAB!

The tentacle will relentlessly attack any who mean to do the host harm. Particularly intelligent ones can identify and deal with non-physical threats, such as creepshots.

Once a year, the host must lay eggs. A few days before the egg laying, the tentacle begins spawning in the host's stomach. The tentacle only uses the host's womb as a seedbed, thus there are distinct differences between egg laying, pregnancy, and childbirth. Because of this, the host doesn't show any of the typical symptoms of pregnancy.

Pat Pat

Wiping her sweat off.

Plep.

It depends on the tentacle, but eggs are generally the same size as chicken eggs, and 8-12 are laid at a time. They are capable of producing more than that, but they take their host's wellbeing into consideration.

The newborn breastfeed for some time. The tentacle will manipulate the host's hormone levels in the months leading up to egg laying, gradually increasing her breast size, enabling them to produce milk both before and after the egg laying. The host's breasts will return to normal after weaning, but because weaning often overlap with periods of enlargement due to continual hosting, the breasts tend to retain their increased size.

Hehe,
so cute.

Stroke

A gathering of girls at a bar

A: Is egg laying day coming up? Your stomach's grown so much lately.

B: Ehehe, it's my first time, so I'm a little scared, but I'm looking forward to it.♪

A: You'll get addicted to it eventually. Too bad it only happens once a year...

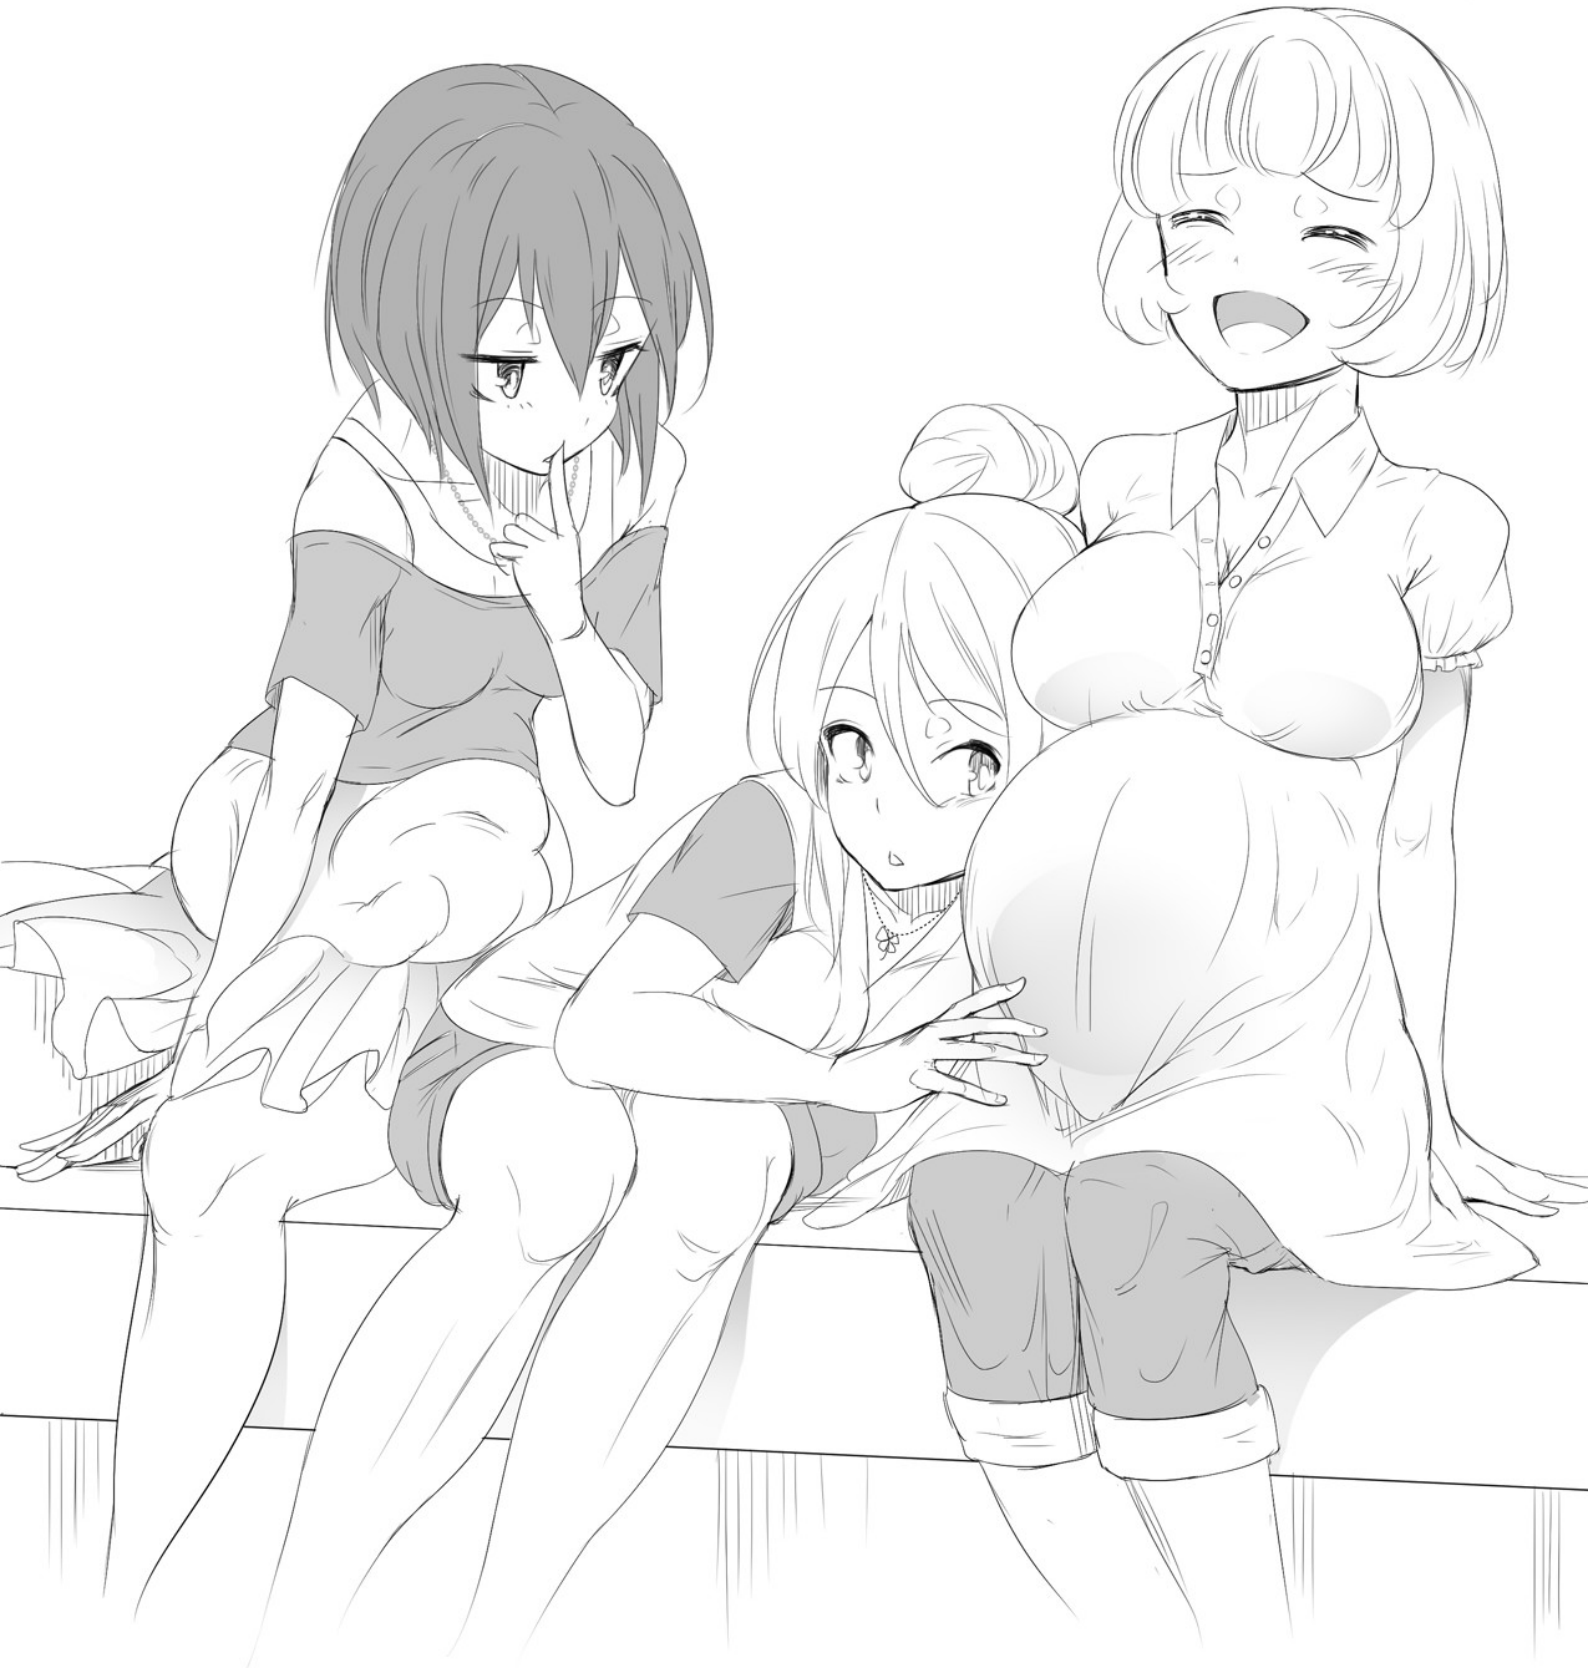

Oh well, anymore than that and it'd be a lot of trouble trying to raise them all.

C: Must be nice. Mine just went inside me, so it's still shrinking and I can't do anything with it. Plus, it doesn't seem very energetic... I'm a little worried.

A: Hmm... Oh! In that case, try eating a lot of celery! I heard on TV that that energizes it.

C: Really!? I'll have to try it!! Oh, waiter! Could I get some some pickled celery, please?

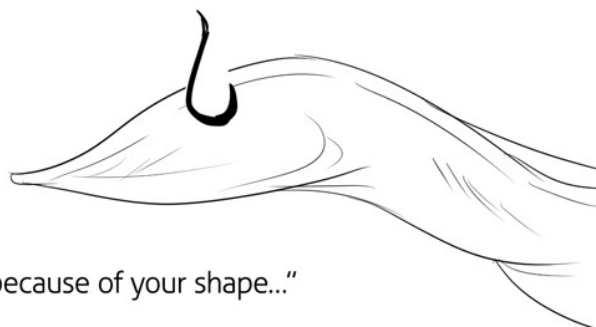

Waiter: Yes, ma'am!

Come on~♡
I'm working~♡

"Why am I the only one that was censored!?"

"Well, because of your shape..."

"Y-You have to admit, you stand out!"

"Oh, I forgot this is the 2DM version!"
